Individual Batting Marks

The batting of the Martins continues erratic, at best; but again th club came through with 3 wins against 4 losses, to complete the first two weeks of play exactly even with the board, 6 wins, 6 losses, percentage .500. Individual batting averages should begin to settle down within an other week or so; at present they run up and down like an elevator, but as the number of times at bat constantly gets bigger it gets harder and harder for a few hits to make a big difference in the figures. Black's four homers in the last four games jumped him to the top in runs batted in, runs scored, home runs, and tied him with Gaylord in total bases. "Hack" slapped the ball at better than a .500 clip for the week, raising his mark from .238 to .411, which is best for those who have participated in all 12 games. He also leads in number hits and two-baggers and is second in runs batted in. Corbitt came down some, but is still hitting at a .320 gait, besides being second in total hits and two-baggers. Ferrell, the newcomer at first, is off to a fine start with 8 for 22 in 5 games, giving him a percentage of .364. Tommy Morris blew in just in time to lead the whole procession, his two hits out of three trips Sunday being good for .667. Here's the whole list-and draw your own conclusions (includes all games through Sunday, June 14):

PESTS ON BIRDS DO NOT AFFECT **HUMAN BEINGS**

Swallows and Bats Do Not Carry Bed Bugs or Lice
On Their Bodies

The idea that swallows, bats, flyng squirrels and other wild animals and birds carry on their bodies such pests as bed-bugs and lice of various kinds and that these birds and animals actually bring them into human habitations, to the detriment of the human race, is nothing but superstition, according to Geo. B. Lay, junior biologist at State

"Most of our native birds carry at least one species of louse, sometimes more than one; and often one species from each of the two orders of chewing lice and sucking lice. Usually, each species or group of birds has a particular kind of louse as a permanent resident or occar as a permanent research of they to get along on a different species or group of birds, find the food not to their liking and die," Lay not to their liking and die,"

of insects, but such pests cannot get small size of the insects. along on a human being. However, the idea seems to be quite prevalent and I am asked about this su-

A joyable and sought for."

IN COOPERATION WITH THE STATE BOARD OF HEALTH, IS **OFFERING**

FREE Protection Against Typhoid Fever & Diphtheria

AT THE PLACES AND ON THE DATES MENTIONED BELOW

Typhoid fever is gradually being reduced, but there must be no let-up in vaccination. Now is the time to protect yourself against it. The season is at hand. Take the treatment every third year.

Diphtheria can be prevented by taking Toxoid. Have your children over six months of age immunized against it. It takes about five months to get the protection, so now is the time to take the treatment to be protected this fall.

There is no excuse for even a case of typhoid fever when perfect immunization for two years at a time may be obtained through attendance at the clinics scheduled below. It is the duty of every intelligent citizen to become inoculated toward all preventable diseases, especially Typhoid Fever-for their own protection as well as the protection of their neighbors. It is also their duty to do all in their power to persuade others to take preventive measures. Typhoid Fever, being frequently fatal, is a useless economic waste, as it is so easily preventable. Remember the schedule below and visit, without fail, the point nearest you on the dates mentioned.
