SINCLAIR HUNTS OIL BY LAND, SEA AND AIR TO HELP SUPPLY

AERIAL PHOTOGRAPHY and reconnaissance are used to map geological structure of earth's surface in Sinclair's intensified search for new oil-bearing structures. It's part of Sinclair's \$150,000,000 expansion program to help meet today's record demand for petroleum products!

UNDER WATER exploration is yielding new, untapped oil reserves. Picture shows use of the gravity meter, one of the newer scientific tools employed by Sinclair to map subsurface formations.

SHOT HOLE drilling machine is used by Sinclair to drill holes for explosive charges, the effects of which are recorded by sensitive Seismograph to map underground formations as deep as 15,000 feet.

Sinclair builds to serve you better
