### The Home of Storms.

The waters of Cape Horn have never been unvisited by storms for more than a week or two at a stretch within the memory of man. Standing on the outposts of the world, Cape Horn is the meeting place of ocean currents of very different temperature, from the icy cold waters of the Antarctic drift to the warm waters of the Brazilian and Peruvian return currents.

The prevailing winds are from the northwest and west, and these, coming from the warm regions of the Pacific, condense into fogs, which the sailors call "Cape Horn blankets" and which are the forerunners of storms. The extremely low level to which the glaciers of Tierra del Fuego descend, the perpetual congelation of the subsoil, the meeting of conflicting winds at very different temperatures, are all direct or indirect causes combining to make this the most constantly stormy region of the world.

"Mr. Thomas' compliments," said the librarian, "and he requests me to state that if Mr. Burridge wishes to whistle he will be glad to discontinue his rehearsal."

To which Mr. Burridge replied suavely, "Mr. Burridge's compliments to Mr. Thomas, and please inform Mr. Thomas that if Mr. Burridge cannot whistle with the orchestra he won't whistle at all."—Success Magazine.
