## Deciding on the Site of a Palice.

in sight of the little red house of the hill, the temptation to call and speak a few words with his old sweetheart, Bessie, was too strong to resist. In the early dusk he had passed through the orchard, but, to his dismay, encountered his aunt instead of Besleft by the Turks in such a state of di lapidation that it resembled a heap of ruins, rather than a city. A German architect was sent for to repair thing of the temple of Theseue was chosen fer the site. Alter awhite King Louis, of Bavaria, paid a visit to his son, "Why," said Bouis, -"the architert has chosen the most unhealthy part of the whole city. Now, I have taken note of a better site, which possesses all the advantages this one. lacks," "But, father, I assure you that-" "Never mind; I will prove what I say." And King Loius at once ordered two pieces of fresh meat to be placed, one en each of the two sites. Sentinels were posted to prevent the meat from being stolen. Twelve hours later the piece of meat left upon the site chosen by the German architect was found to be putrefied ; while the other piece, placed upon the site of the present palace, was found to be perfectly fresh and sweet. Louis of Bavaria was a student of the science

## A Marvel in Stone.

A nemarkable Indian idol was recently taken from Horse Creek in who were present was R. A. Blair, the life of both be considerably shortened? owner and discoverer of the finest lot of mastodon bones now in the United

States, one who has devoted all his leisure to the style and literature that would make his opinion of value in this matter.

The subject is of such importance as to warrant giving the description and circumstances of the finding of the object the widest publicity. This Indian or Aztec Idol, as it is believed to be, is four feet long and weighs sixty-four pounds. - In general outline of figure it resembles a huge lizard or chameleon. It is carved out of a slate or lead-colored stone or composition of moderate hardness, is as smooth as glass, and shows that it is the work of a person of fine imagination; intelligence and skill, whether he lived one thousand years ago or is living to-day. On a closer examination the idol is found to be made up of parts of a dozen creatures amphibia, carnivora, insects, reptiles and fowls. The top long, narrow ribbon of a picture it of the head has the resemblance of a makes, with its little spots and dots | flat bone plate, and is shaped like that

## The Formation of Coal.

At a meeting of the Nationa Academy of Sciences in New York, 5. Newberry, of Columbia college, real an essay on "The physical conditions under which coal was formed." T paper was in substance as follows: The peat-bog theory of the formation of coal has generally been lar cepted. This view is to the effect that coal is the residual hydro-carbon of plants which have grown where their remains are found, and that it has been found precisely as peat accumulated in marshes. Mr. Grandeury has recently cudeavored to refute this theory, and that makes it necessary to discuss the matter again. He holds that the plasts from which the coal is formed hare been transported from their place of growth to a greater or less distance in. the bottom of some water basin. Nature has in most instances left a full and faithful record of her work in the facts to which we have given an imand splashes of color here and there, of an eagle, with a long, sharp beak. perfect study; I will confine myself to
