TRIALS of the NEEDLEMS

Munyon's Paw Paw Pills coax the liver into activity by gentle methods. They do not scour, grip or weaken. They are a tonic to the stomach, liver and nerves; invigorate instead of weaken. They enrich the blood and soothe the stomach to get all the nourishment from food that is put into it. These pills contain no opiates, no arsenic, no mercury, and are stimulating. For sale by all druggists in 10c and 25c sizes. If you need medical advice, write Munyon's Doctors. They will advise to the best of their ability absolutely free of charge. MUNYON'S, 534 and Jefferson Sts., Philadelphia, Pa.

Munyon's Cold Remedy cures a cold in one day. Price 25c. Munyon's Rheumatism Remedy relieves in a few hours and cures in a few days. Price 25c.

So. 53-'09.

A Question Recented.

"Were you ever arrested before?" asked the magistrate whose principal business is imposing fines for speeding.

"What do you think I've been doing all these years?" asked the chauffeur, "pushing a wheelbarrow?"—Washington Star.

Friendly Advice.

"I hope to grow gray in their service." "Very laudable ambition, very laudable. But don't scorn the hair dye too long. You know there's a fad nowadays for young men."

Wilbur and Orville.

Disappointed in the Wrights, you say? "A leetle." "How so?" "Didn't they fly all right?" "Yes; but they didn't wear no spangles."

Mrs. Winslow's Soothing Syrup for Children teething, softens the gums, reduces inflammation, allays pain, cures wind colic, 25c a bottle.

Kind words heal friendship's wounds.—French.

Don't accept a substitute for Perry Davis' Painkiller. Nothing is as good for rheumatism, neuralgia and similar troubles.

He hurts the good who spares the bad.—French.

Allen's Lung Balm has for years cured deep-seated coughs, colds and bronchitis. Everybody should know about it.

He makes no friends who never made a foe.—Tennyson.

Dr. Pierce's Pleasant Pellets cure constipation. Constipation is the cause of many diseases. Cure the cause and you cure the disease. Easy to take.

He that always complains is never pitied.—German.

FOR COLDS AND GRIP.

Hick's CAPSIDINE is the best remedy—relieves the aching and feverishness—cures the cold and restores normal conditions. It's liquid—effects immediately. 10c, 50c, and \$1.00 at drug stores.

Every dog is valiant at his own door.—French.

Rheumatism Cured in a Day.

Dr. Detchon's Relief for Rheumatism and Neuralgia radically cures in 1 to 3 days. Its action is remarkable. Removes the cause and disease quickly disappears. First dose greatly benefits. 75c. and \$1. All druggists.

Let not the shoemaker go beyond his last.—Latin.

To Cure a Cold in One Day

Take Laxative Bromo Quinine Tablets. Druggists refund money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Moral character carries with it the highest power of causing a thing to be believed.—Aristotle.

Skin Humor Lasted 25 Years.

"Cuticura did wonders for me. For twenty-five years I suffered agony from a terrible humor, completely covering my head, neck and shoulders, so even to my wife, I became an object of dread. At large expense I consulted the most able doctors, far and near. Their treatment was of no avail, nor was that of the hospital, during six months' efforts. I suffered on and concluded there was no help for me this side of the grave. Then I heard of some one who had been cured by Cuticura Remedies and thought that a trial could do no harm. In a surprisingly short time I was completely cured. S. P. Keyes, 147 Congress St., Boston, Mass., October 12, '09."

Face Covered With Pimples.

"I congratulate Cuticura upon my speedy recovery from pimples which covered my face. I used Cuticura Soap, Ointment and Resolvent for ten days and my face cleared and I am perfectly well. I had tried doctors for several months but got no results. Wm. J. Sadler, 1314 Susquehanna Ave., Philadelphia, May 1, 1909."

Caught.

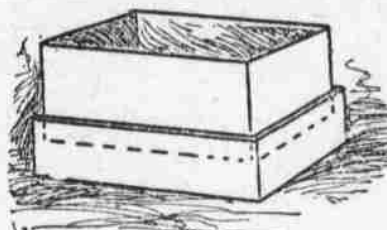

"Pshaw," exclaimed Miss Yermel impatiently, "I'm sure we'll miss the first act. We've waited a good many minutes for that mother of mine." "Hours, I should say," Mr. Slo man retorted rather crossly. "Ours?" "Oh, George!" she cried and laid her blushing cheek upon his shirt front.

Knowledge dwells in heads replet with thoughts of other men.

PRACTICAL ADVICE ABOUT DIVERSIFIED FARMING

A Winter Dust Box.

Thinking the hens did not use their dust bath as much as they ought and believing the reason for this to be because the dust material was so cold, I changed conditions in this

Dust Box.

way: A dry goods box three feet long, twenty inches wide by eighteen inches deep, was obtained. The bottom boards were removed and a new bottom nailed on, which was one-fourth inch thick.

Another box, just enough larger to allow the first to slip inside easily, was next found. This was placed in the sunniest spot in the henhouse and filled to within four inches of the top with fresh horse manure. On top of this, says the Farm and Home, the smaller box was set and filled with within six inches of the top with sifted hard coal ashes and some powdered tobacco stems. In a short time the ashes felt warm and the hens soon found this out. They have kept remarkably free from lice, due, I believe, to the tobacco. Fresh horse manure is put in two or three times during the winter.

Best Time to Sow Alfalfa.

M. D. R. A., Luckett, writes: I desire to sow six acres in alfalfa. I plowed the land in May and am going to lime it at the rate of thirty bushels per acre to sow in August. When is the best time to sow in the fall? What is the best way to cultivate and fertilize alfalfa?

Answer: Lime the land intended for alfalfa by all means. From twenty to thirty bushels is a liberal amount to use. Use twenty pounds of good, clean seed and test its germinating power before using. The seed should be passed through a sieve of twenty meshes to the inches in order to remove dodder which is a most pernicious pest, and as there is much of it in alfalfa seed it will pay you to sieve it carefully by hand before sowing. If the season is favorable, you may sow alfalfa from the 15th of August to the 15th of September. Early sowing is advisable so the alfalfa can make a strong development before cold weather, but it should not be allowed to go into the winter with too much as it may be injured by severe freezing or smothered by heavy snow falling on the land remaining for some time.

A complete fertilizer composed of nitrate of soda, acid phosphate and muriate of potash will be useful on land intended for alfalfa. Mix 300 pounds of high grade acid phosphate and 100 pounds of muriate of potash together and apply broadcast or with a drill at the time of seeding the alfalfa. We prefer to seed alfalfa broadcast or distribute with one of the seeders now on the market and cover with a weeder. It should not be covered deeply. As soon as the alfalfa comes up apply the nitrate of soda at the rate of 100 pounds per acre. Put the nitrate on when the leaves are dry so as not to injure them. The lime should be applied two or three weeks before the seed is sown. Liberal fertilization for alfalfa is absolutely necessary even on the richest of our land. Vegetable matter is an essential for this plant. Weeds are one of the worst pests with which it has to contend, especially when young, as it takes some time for alfalfa to establish itself. You are acting wisely in summer following your land so as to free it of weeds. When the alfalfa is well up a good top dressing of well rotted farmyard manure at the rate of ten to twenty loads per acre will be very helpful.

What the Growth of Winter Cereals

Answer: When cotton yields about 176.67 pounds of lint per acre, which is not far from the average yield, the sale of the lint removes from each acre of land forty-nine pounds of nitrogen, twelve pounds of phosphoric acid, and 1.13 pounds of potash. As there are about two pounds of seed produced for each pound of lint per acre, we would have a yield of 653.34 pounds of seed cotton. This seed cotton if sold from the farm would remove 10.85 pounds of nitrogen, 3.6 pounds of phosphoric acid and 4.1 pounds of potash; the total amount of plant food removed per acre would then be 117.49 pounds of nitrogen, 3.72 pounds of phosphoric acid and 5.23 pounds of potash. A yield of one bale per acre, or about two and a half times the average yield, would remove 28.35 pounds of nitrogen, 9.30 pounds of phosphoric acid, and 15.07 pounds of potash from each acre of land. If our farmers would be taught to feed the cotton seed meal at home and feed it, we would not experience so much difficulty in maintaining the fertility of our lands.

One Man Saw.

If you want to do some sawing with a cross cut saw and no one to help you, take a green hickory pole, or any wood that will bend without breaking, about the size of a bean pole, take off one of the saw handles, split one end of pole three or four inches, bore a small hole in it, and put on end of saw and put a nail

through pole and hole in saw that you took handle off.

Now bring pole over to other handle in a circle and fasten to top of saw close to handle; this holds saw steady so one man can saw just about as well as two. This rig is fine for sawing up stove wood. I have used one and know it to be O. K.—E. R. Fresland, in The Epitomist.

Destroying Ox-eye Daisy, Etc.

A. J. S., Allanstand, N. C., writes: I have some very steep mountain land of a dark loamy soil overlying a red sandy subsoil. Would like to know the best grass for such land for pasture? How would alfalfa do on this land? I would like a plan for destroying the ox-eye daisy.

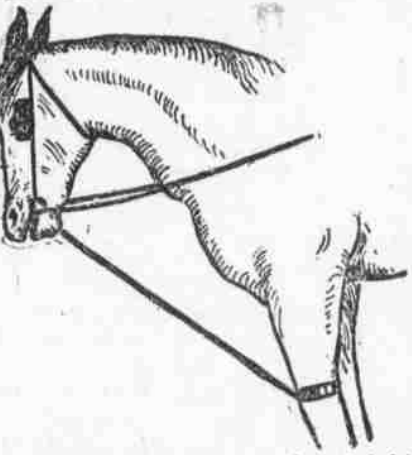

Answer: It is rather hard to say just how well certain varieties of grass or alfalfa might succeed under the conditions outlined in your letter. A grass that will form a sod would be best, of course, for very steep land, and blue grass would be excellent for the purpose, provided the climatic conditions will enable you to grow this grass successfully. You do not mention the elevation, hence I am not prepared to say how well blue grass will be on your land. From 2000 feet up blue grass as a rule will do fairly well. Next to it as a sodding grass would be red top, though orchard grass will answer the purpose very nicely, and will be more likely to succeed under a variety of conditions than any of the other varieties mentioned. It also makes excellent grazing, and you will find it a hardy and satisfactory grass in every way, the virtues of which as a rule are not fully appreciated.

The land described might grow alfalfa very well if it is rich. Alfalfa loves a dark loamy soil, and one of the reasons why we have a good deal of difficulty in starting it in the South is because of the tenacious character of our subsoils. Judging from your letter this would not be a difficulty in your case, and so I think it would pay you to try alfalfa on a small area. Sow an acre in the fall from the 1st to 15th of September, fertilize the land well with phosphates and potash and top-dress the young alfalfa with nitrate of soda after it is up. The nitrate of soda should be put on when the leaves are dry so as not to burn them.

There is only one plan of destroying the ox-eye daisy with which I am familiar, that is the persistent cultivation of the land and cutting the plants so as to prevent their seeding. They seed very freely, as you doubtless know if you have had experience with this pest. Summer following the land or putting in cowpeas to act as a smother crop will help you to control the pest. Fight it for all you are worth, for it is a fearful nuisance and will spread all over your farm unless you hold it in check.

Restraining a Horse.

An old horseman gave me his way of restraining a fractious horse which answers the purpose in good shape. It is a strap from the foreleg a little above the knee to the halter and fastened with buckles at each end. The

strap is two feet long or about right to hold the head nearly level. The contrivance makes unruly action very difficult and unpleasant for the horse, and he finally learns to behave without its aid.—I. A. L., Middlesex County, Connecticut.

Fertility Removed by the Cotton Crop

R. S. S., Memphis, Tenn., writes: Please give me the amount and value of the elements of fertility consumed by the cotton crop from an acre of soil.

Answer: When cotton yields about 176.67 pounds of lint per acre, which is not far from the average yield, the sale of the lint removes from each acre of land forty-nine pounds of nitrogen, twelve pounds of phosphoric acid, and 1.13 pounds of potash. As there are about two pounds of seed produced for each pound of lint per acre, we would have a yield of 653.34 pounds of seed cotton. This seed cotton if sold from the farm would remove 10.85 pounds of nitrogen, 3.6 pounds of phosphoric acid and 4.1 pounds of potash; the total amount of plant food removed per acre would then be 117.49 pounds of nitrogen, 3.72 pounds of phosphoric acid and 5.23 pounds of potash. A yield of one bale per acre, or about two and a half times the average yield, would remove 28.35 pounds of nitrogen, 9.30 pounds of phosphoric acid, and 15.07 pounds of potash from each acre of land. If our farmers would be taught to feed the cotton seed meal at home and feed it, we would not experience so much difficulty in maintaining the fertility of our lands.

BIG DEMAND FOR RED CROSS STAMPS.

A dispatch from Nashville, Tenn., says the demand for the Christmas Red Cross Stamps is becoming greater every day. Merchants are telephoning constantly to headquarters for more stamps, and the first supply at the office is almost completely exhausted. More, however, are being rushed from the War Department at Washington and will be here in a day or so, before the supply is exhausted

from the stores. One thousand, one hundred and eighty stamps were sold at Phillips & Butcher's on Monday, the first day the stamps were put on sale, and on Tuesday 1,283 were sold from the same store. This firm is so interested in the sale of the Christmas stamps that they have placed the attractive stamp table near the door in a conspicuous place, even going so far as to close one side of the door.

"Home Grown Cow Feed."

It is necessary for a milk cow to have the right sort of feed, in order to get the most milk for the least cost.

The right kind of feed means feed containing the right kind of nutritious elements in the right proportions.

Protein and Carbohydrates are the principal feeding elements. Protein is the most important for milk, and it is also the most expensive. Peas and peavine hay in abundance is most excellent feed for milk production.

But sometimes the farmer has to buy feed for his cows, and he should know what is the most profitable to buy. He must never forget that Protein is the great measure of value. He must insist on a guaranteed analysis of Protein. Wheat bran contains 15 per cent Protein, and is a splendid feed. But, the cost is too high for this part of the country, because it must be freighted from the west. It costs about \$32 per ton laid down.

If any one in the cotton growing States wants to buy cattle feed, there is nothing to compare with "Boveta," which is the trade mark adopted by the Southern Cotton Oil Company, of Charlotte, N. C., for their machine-mixed meal and hull feed. It is guaranteed 17 per cent Protein and may be bought for \$19 per ton f. o. b. Charlotte. It is almost twice as cheap as wheat bran, when feeding quality is considered. The feed is proportioned out by machinery and mixed by machinery, so that it runs marvelously uniform.

A most important thing for a cotton grower to consider is the fact that "Boveta" is strictly a home-grown feed, and in buying this feed, he is patronizing himself. It is made entirely from cotton seed.

Itch cured in 30 minutes by Woolford's Sanitary Lotion. Never fails. At druggists.

"Covers Dixie Like the Dew."

The net average circulation of the Atlanta (Ga.) Journal for the first eleven months of 1909—daily, 51,111; Sunday, 55,441—proves conclusively that it "Covers Dixie Like the Dew." The subscription price of the paper, by mail, is: Daily and Sunday, 1 year \$7; daily without Sunday, 1 year \$5; Sunday only, 1 year \$2. The Semi-Weekly Journal, 8 pages, 50 columns, issued Tuesday and Friday, sent to any address, one year for \$1.00. Address The Journal, Atlanta, Ga.

Force without judgment falls by its own weight.—Horace.

PLANNING FOR A NEW NEGRO EMPIRE.

William Buckley, in Leslie's Week

ly says: That Theodore Roosevelt while apparently in Africa on a hunting expedition, killing tigers and fleas, is in reality carefully investigating conditions to ascertain if it be not possible and practicable to establish in the Sudan country a second empire of Liberia, and thereby solve forever the negro question of American. He says the disclosure is made

by a United States Federal attorney in charge of a Southern district who relates the supposed secret plans of Roosevelt in all their details. The plan as revealed by the former President's confidant is to stake out a good section of the country in the Sudan, north of Congo Free State and West of German and British East Africa, hoist the Stars and Stripes at the four corners, have Uncle Sam de-

clare a protectorate, organize the native tribes into a suzerain, and then will come the expatriation of the negroes from this country to the new empire in the heart of Africa. In the rounding out of the plan a wedge will be formed by a nation under the control of the United States that will prevent the expansion, territorially or commercially, of Germany and will make the United States a factor in
