OPINION NOT ALWAYS FINAL

Pretty Safe to Say That Doctor's Diagnosis Was "Away Off" in This Case,

The pretty daughter of a physician is engaged to a college student of whom her father does not altogether approve. His daughter is too young to think of marriage, the doctor asserts; the college student is too young to think of it, likewise. It is out of the question.

She explained all this to her lover the other night.

"Father says," she summed it up; "father says, dear, that I will have to give you up."

The young man sighed. "Then it's all over?" he murmured, with gloomy interrogation. And the girl laughed and blushed.

"Well," she said, "well, you-youknow that when the doctor gives you up that's just the time for you to take more hope. Isn't it sometimes that way?"-Reboboth Sunday Herald.

Careless and Cappy.

We have undertaken to blend in one the best of the two proverbial conditions-to be careless and happy, hairless and cappy. We are now happy and cappy, and frequently careless as well. A pretty figure may be conjured up-a figure in leaf-green satin veiled with rose and silver shot gauze.

The dark hair is covered by a sailor's cap, point and all, worn flatly over the whole head, the point falling at the back. Instead of being made of scarlet cashmere, it is of the gauze, over silver tissue, and studded with pink and yellow topaz, while it is bordered with great gray pear-shaped pearls, these, of course, hanging around the back of the neck and over the soft hair in front.

We have taken to cans!

The Lord's Advertisement, Willie had been to see his old nurse, and she had shown him her treasures, including some very strikingly colored scripture texts which graced her walls.

A few days afterward his aunt gave him a dime to spend at a bazaar. Seeing that he seemed unable to find what he wanted, she asked him what he was looking for.

"I am looking for one of the Lord's advertisements, like Mary has in her room," said Willie.

Easy Game.

"What you need," said the kindly friend, "is a change of air. You should leave the city a bit-forget cares and worries. Travel! Breathe the pure ozone of the prairies. Go out to Montana and shore mountain goats!" The listless one bristled.

"Montana!" he snorted. "Why, I know a mountain goat in Newark!"-New York Times.

Love making is one kind of cold weather picnic.

If You Knew How Good

are the sweet, crisp bits of

Post Toasties

you would, at least, try 'em.

The food is made of perfeetly ripe white corn, cooked, sweetened, rolled and toasted.

It is served direct from the package with cream or milk, and sugar if desired-

Winter Months on the Farm

How to Improve Them

Profitable Pork Production

Breed, Breeding and Feeding the Foundation of Success. Management of the Sow and Young Pigs By PROF. G. C. HUMPHREY Wisconsin College of Agriculture

Copyright, 1910, by Western Newspaper Union

to 75 per cent. on butchering, as compared with the lard type, which ity of skin and hair. dresses 84 to 87 per cent., meets with little favor in some sections. In fact immature and unfinished lard hogs satisfy most of the bacon demands. On the other hand, the lard type, which is low, deep, broad, heavily-fleshed, and including the Poland China, Duroc Jersey, Berkshire and Chester White breeds, is always in demand. Selection of Breed.

The selection of a breed is due rather to personal preference than to any superiority of one of the four varieties of lard hogs. Efficient managemen will succeed in the long run, no REFERENCE:-AUGSBURG BANK, Rural Retreat, Va. matter what breed is selected as the foundation stock. The market itself does not differentiate between breeds but rather requires uniformity in type combined with superior finish and quality. The best plan for each farmer to follow is to select the breed that most closely corresponds to his particular conditions as determined by personal preference, method of production, local popularity of the breed and the market demands.

Due to the fact of the rapid responses to the introduction of superior blood and the ready retention and transmission of acquired characteristics among the swine family, the upgrading and improvement of the scrub herd is a relatively simple matter. There is no excuse for any farmer maintaining a herd of inferior scrub hogs on his farm. By the use of a good, pure-bred sire anyone can, in a few years and at little expense, establish a grade herd equal to a purebred herd as regards pork production. Of course, this necessitates the rejection of all inferior animals from the breeding herd and the maintenance of only the improved types.

Importance of the Boar. The herd boar should be a purebred, prepotent sire strongly evincing his breed characteristics and possessing the necessary market confirmation. He should be short and broad

At the present time there is consid- | are being fattened for market, without erable controversy as to the merits danger of causing digestive disorders. of the lard type and the bacon type | The oil meal in this ration not only of swine. The long, narrow, thin- gives consistency and uniformity to fleshed bacon type, which dresses 70 the slop, but it also regulates the digestive organs and improves the qual-

A good brood sow ration consists of cornmeal 23 pounds, ground oats 23, wheat middlings 23, wheat bran 23, oil meal 6 and salt 2. This is an excellent ration, the wheat bran giving it bulk and increasing its laxative effects.

A good ration for small pigs includes ground oats (free from hulls) 35 pounds, wheat middlings 35, cornmeal 20, oil meal 8 and salt 2. This should be supplemented with warm skim-milk for young pigs, fed just before and after weaning time. A good

A Good Type of Brood Sow for Producing Market Pigs.

plan is to feed small quantities of this ration to four-weeks-old pigs for two weeks and then wean them and gradually accustom them to the growing ration.

In the case of the first two rations oats may be omitted and the same amounts of corn and wheat middlings increased or barley may replace the corn, as it is excellent for bacon production. Corn and clover pasture produce excellent gains towards the end of the fattening process. In the brood sow ration bran may be replaced by roots and oats may be omitted, providing the sows have abundant exercise. After the farrowing period sows need the growing ration for the maintenance of large litters.

Care at Farrowing and Weaning. The sows should be housed in com-

Fattening Swine Can Be Kept Most Economically in Lots With Individual Houses for Each Dozen Hogs. A Feed Wagon Is a Labor-Saver.

should rise rapidly between the ears and widen into a body which is long, uniformly wide and deep.

Massive forequarters and narrow hindquarters with insufficient depth in hams and twist should be avoided. Refinement in the head is essential, supplemented by a broad, strong, slightly arched back, a wide loin and wide deep hams. The legs and feet of the boar should be short, strong and

Having selected a boar corresponding to the above type, it is best to quarantine him for three or four weeks to eliminate all danger of the introduction into the herd of parasites and diseases by way of the newlypurchased sire. A boar should not be used for service earlier than the age of eight months and then should be only allowed to serve one female a day, preferably in the early morning,

before feeding. The sow should correspond closely to breed requirements, although she can be a little more refined in features and bene. She should possess ten to tweive sound teats, also a quiet, doctle temperament indicative of a tion satisfies their demands. The ragood mother. Both the boar and sow should be in good condition for the V-shaped trough. Skelled corn should breeding season and should be grown rather than fattened. During pregnancy the sows should be forced to exercise by scattering their feed in different places or by making them and not to fatten thom. They should root for their feed mixed with litter.

Rations for Breeding Swine.

at Wisconsin college of agriculture are annually it is possible to let the pigs about perfect. The only objection to run with their dam for ten to twelve them is that they are too expensive weeks, while in other cases only part for long-continued feeding operations. of the litter is taken away from the A good ration consists of 100 pounds gow and the rest left with their dam of mixed feed fed as slop, composed to gradually dry off her milk flow. as follows: Cornmeal 30 pounds. ground oats 20, wheat middlings 20, oil meal 8, salt 2.

This ration is particularly adapted for swine from the weaning period until they reach 300 pounds in weight. All the corn that the pigs will clean

in face, broad between the eyes and | fortable, sanitary quarters and fed possess short, broad ears. His neck as usual up to the date she is to farrow. Knowing the date the sow was bred, and that the period of gestation for swine is 112 to 116 days, it is easy to approximate the date of farrowing. When the sow's udder becomes distended and milk can be drawn from her teats she is due to rowing, the sow should be fed the slop ration and laxative feeds to keep the bowels open. She should be bedded with oat straw or shredded corn fodder, which furnishes a dry, dustless bedding.

Dust of any kind will cause coughs or pneumonia among the little pigs. Keep the sow quiet immediately after farrowing, allowing her only cold water, and at the end of 24 hours give her a light bran mash. After this the feed can be increased gradually up to the fifth day, when a liberal ration may be fed. Judicious feeding prevents milk fever in sows and scours in pigs.

At the age of four weeks pigs begin to eat, and it is well to have them feeding well before weaning time. Fresh milk added to the small pig ration should be fed in an easily cleaned be kept in a dry place before the pigs, and they will soon learn to eat it.

The main point to be considered in feeding young pigs is to grow them thrive on a well-relished ration and grow steadily. Weaning can be completed at six to eight weeks of age. Some of the best swine rations used Where only one litter of pigs is raised

Sod for Orchard.

The pear orchard will do best when allowed to grow up in soil. Slow and hardy growth in sod makes pear trees more resistant to disease. Blue grass up can also be supplied where they makes a good sod for the pear orchard.

MAKING MONEY WITH SQUABS

Largest Pigeon Farm in World Turns Out 250,000 Birds Every Year -Much Work Required.

Travelers approaching Los Angeles from the north are astonished sometimes at seeing from the car windows flocks of pigeons numbering many thousands just on the outskirts of the Angel City. These belong to the world's largest pigeon farm, owned by T. R. Johnson, and justly considered one of the show places of southern California. Merely as a curiosity it ranks with the alligator farm, the numerous ostrich farms and similar freak establishments.

The pigeon farm consists of about eight acres of sandy, gravelly land along the bed of the Los Angeles river-a "river" only by courtesy during the long, dry summer months,

Money Makers.

when it becomes practically a mere rivulet. The farm was established about ten years ago on a comparatively small scale; but the venture proved so profitable that the owner developed the business along lines such as have marked the growth of other great modern industries, until he claims to now have more than 100,000 fully grown pigeons in his establishment, not to mention tens of thousands of squabs. Any one questioning the accuracy of the figures has the privilege of counting. As a matter of fact, the estimate probably is many thousands below the actual number.

The object of this vast pigeon breeding establishment is the production of squabs. At the present time about 40 dozen squabs are killed and sent to market every day; but a little later in the season the daily output will be much greater, so that the annual squab crop from this one establishment is about 250,000. These sell at anywhere from \$2.50 up to \$4 per dozen (depending upon the time of year), and it is evident that the income from the mammoth pigeon farm foots up to a very tidy sum annually. However, this is not all "velvet" by any means. The birds consume between two and three tons of grain every day and the labor of looking after them, keeping the buildings clean and sanitary and killing and preparing the squabs for market is not a trifling matter.

WATER TROUGH IS SCREENED

about 15 inches long and have a tinner solder on some end pieces. Then put a wire screen with a one-inch mesh over the top. The chickens canfarrow within 24 hours. After far- not get into the water and one filling will do for all day.

Food flavors the egg.

Dry houses prevent roup. Too much raw meat produces The first essential in the production

of eggs is the health of the hens. Poor drainage in the chicken yard always results in unhealthy birds. Feeding cannot be properly regu-

lated when a mixed flock of large and small fowls are kept. The orchard is a splendid place for poultry to range in. Poultry is a

very good insect destroyer. It would be a good thing to move the poultry yards occasionally giving the hens new, clean grounds to live

With young chicks there is as much danger of overfeeding as underfeeding. Feed often and regularly, in-

stead of too much at one time. The south slope of a hill makes a splendid location for a poultry house. The north and west sides are naturally protected from the cold winds.

In some places chickens are purchased, confined and finished for market on milk and ground feeds, the milk constituting the larger portion of the diet.

Save all the grain, such as kaffir, milo, sorghum, broom corn seed, millet seed, etc., for poultry. It is often difficult to get a variety of food for towls during winter.

A READER CURES HIS CONSTIPATION-TRY IT FREE

Simple way for any family to retain the good health of all its members.

The editors of "Health Hints" and "Questions and Answers" have one question that is put to them more often than any other, and which, strangely enough, they find the most difficult to answer. That is "How can I cure my constipation?"

Dr. Caldwell, an eminent specialist in diseases of the stomach, liver and bowels has looked the whole field over, has practised the speciality for forty years and is convinced that the ingredients contained in what is called Dr. Caldwell's Syrop Pepsin has the best claim to attention from constipated people.

Its success in the cure of stubborn constipation has done much to displace the
