

Home and Club News

By Eugenia Patterson, Home Agent
 Schedule of clubs for next week:
 The home agent will be in Raleigh Tuesday, Wednesday and Thursday attending the annual conference of home agents. The Beech Grove club will meet Friday, November 10.
 Saturday morning: Curb market will begin at 8:30 instead of 8:15. Please notice the change of time. All buyers are asked to not go behind the tables or pick over the produce before the bell rings. It isn't fair to the sellers or buyers either. Let's give them all a fair chance. We are asking the sellers to not sell or fill up bags or weigh out produce until the bell rings. Thank you!

PLANT NOW FOR SPRING PANSIES

Too Many People Depend Nurseries for Stock; Not Difficult To Grow

The pansy is becoming more popular in North Carolina flower gardens, but too many growers depend on buying plants from nurseries rather than producing them at home.

"We have found that the average gardener may grow his own plants with fair success by observing a few simple rules," says J. G. Weaver, in charge of horticultural greenhouses at State College. "The pansy grows best in cool weather and there is still time to sow seed for flowers next spring. To grow the plants successfully one must prepare the seed bed carefully. This means pulverizing the soil for about six inches and raking away all rubbish. Add about one inch of well-rotted stable manure to the bed and place about one-half an inch of good garden soil on this. Smooth it down and soak the bed with water."

Weaver says the seed may be planted on this bed in rows or broadcast. It is better to drill the seed and cover them lightly with fine sand. Keep the surface moist but not wet. This may be aided by covering the bed with unbleached sheeting. As the plants come through, gradually remove the shade. Never allow the beds to become dry, as this will be fatal to growing strong plants.

As soon as the true leaves are formed, remove the pansy plants to their permanent location. Weaver says it is not wise to transplant any more than is absolutely necessary. He says also that exhibition blooms may be obtained by preparing the permanent bed rather carefully. This means preparing the growing place with the same care as was used with the seed bed.

As fast as the plants bloom remove the blossoms when the petals fade. This will assure continuous blooming.

SAYS IDLE LAND DOES MUCH HARM

Now Over Million And Half Acres Lying Idle in This State

With over one and one-half million acres of cleared land now lying idle in the State any additional clearing by cutting off timber will only add to that land on which the farmer is paying taxes and from which he is getting no return.

"This idle land is just as harmful in an economic way as idle labor," says R. W. Graeber, extension forester at State College. "The natural erosion and leaching will cause untold losses in soil fertility and this cannot be replaced in a day, a year, or a number of years."

To this million and a half acres now lying out will be added thousands of other acres released from cash crop cultivation under the crop reduction program, points out Graeber and he advises farmers not to cut timber and clear the land but to plant trees on much of the land that it not now in cultivation.

Many farmers are even now cutting down trees that within a few years would make valuable lumber, Graeber says. This timber, in most cases, is not of commercial size but, in a few years, would be worth considerably more as saw logs than they will bring this year as cord wood.

Pines that are from 15 to 20 years old are increasing in value from two to three dollars an acre which is enough to pay taxes and have little surplus if figured from a money saving standpoint. Any additional clearing will only mean more land to wash away and the farmer will lose in both soil and timber value, says Graeber.

I keep coming back to that word "balanced" on the back of the Chesterfield package

YOU often hear the word balance — something is out of balance — top-heavy, not on an "even keel."

What you read, "Chesterfield Cigarettes are a balanced blend," means that the right amounts of the right kinds of tobacco are welded together; that is, home-grown tobaccos, the right kind, the right quantity — are blended and cross-blended with tobaccos from Turkey and Greece.

When these tobaccos are balanced one against the other, then you have a mild cigarette.

When they are in balance, then you have a better-tasting cigarette.

May we ask you to read again the statement on the back of the Chesterfield package? May we ask you to try Chesterfield?
