ADVISES GETTING READY TO PLANT LESPEDEZA CROP

Agronomist Says Getting Ready As Important As Actual Seeding
Getting ready for planting lespe-deza is almost as important as the actual seeding itself, says Enos C. Blair, extension agronomist at State College.
If the grower raised his own seed, he should clean and prepare it for planting so that there will be no delay when planting time comes, Blair says.
Otherwise, he should investigate prices and the quality of seed handled by different seed houses so as to get the best available seed at the most reasonable prices and have time to order it before planting time.
Tennessee 76, Korean, Kobe, and common lespe-deza are the varieties best adapted to North Carolina soils and most frequently planted, Blair points out. About 25 pounds to the acre is sufficient.
Although lespe-deza will not grow well except when handled carefully, it is not as difficult to raise as many people think, and it is one of the best soil builders and hay crops that can be grown.
When planting lespe-deza on small grains which were sown the preceding fall, Blair says, the lespe-deza should be planted in February or March. The lespe-deza will grow after the grain has been harvested and may be grazed, plowed under, or harvested

Tobacco Barns Make Good Curing Houses for Potatoes

Forsyth farmers are finding that tobacco barns make good sweet potato curing houses. L. D. Smith has cured 700 bushels in this way, and the sweets are keeping well.

For seed in the fall.
For detailed instructions regarding lespe-deza in different sections of the state, Blair suggests that the farmers consult their county agents.
