

March Honor Roll at Creswell School Just 1 Under Prior Month

90 Students on List for Past Month; Fourth Grade Has 15

There was a slight decline in the number of honor students at the Creswell High School during the month of March, but the decrease was only by the margin of a single name, as 90 students are on this select list.

With 15 names the fourth grade leads this month, followed closely by

the second and third grades, which have 14 students each.

The list follows:

First grade: Alvie Davenport, Rebecca Patrick, Anita Nooney, Marvin Davenport, Ruth Mae Sawyer.
Second grade: Jean Craddock, Louise Davenport, Cleo Davis, Lewis Davenport, William Furlough, Jack Midgette, Joyce Patrick, Alice Davenport, Dorrence Phelps, Mary Jane Ambrose, Marjorie Davenport, Wade Phelps, William Clifton, Horace Ricks Furlough.

Third grade: Aubrey Woodley, Geris Phelps, Dan Davenport, Nell Jones, Robert Irwin Stillman, Garland Spruill, Mary Jane Stallcup, Betty Swain, Sadie Lee Patrick, Toledo Overton, Mattie Mae Oliver, Bet-

April Garden Notes for Washington County Farmers

April is the month in which we can begin planting our gardens in earnest. Snap beans, lima beans, cucumbers, squash, okra, and other seed of

Refrigerator Door Opened and Closed Most Often in Home

G-E Test Models Are Given Equivalent of 30 years' Use

The door of the household refrigerator is opened and closed more than any other door of the house, according to James W. Norman, local General Electric Dealer.

"A door-slammng machine slams the door of each test model 500,000 times the equivalent of 30 years' use, before the cabinet design is accepted by General Electric for production," he said.

Other interesting refrigerator facts revealed by Mr. Norman are as follows:

A jiggling machine shakes and jostles the test cabinet day in and day out to prove it sturdy.

It takes 24 hours to manufacture a G-E refrigerator, and three-fourths of this time, too is spent in inspection and testing. Parts are fitted to the accuracy of three ten-thousandths of an inch, or one-seventh the thickness of a human hair. The unit is operated under water. Women, as well as men, inspect each cabinet on the assembly line.

Years of research and experiment are required to perfect each improvement before it is incorporated in a new model. General Electric started experimenting in 1912 with various types of refrigeration units, but it was not until 1927 that this company introduced the first completely sealed refrigerating unit.

Thousands of 1927 model Monitor Top refrigerators are still giving satisfactory service, but today a housewife can buy a much improved version of the General Electric sealed unit refrigerator at half the cost; one that will operate on less than half the current used by its 1927 predecessor.

ty Jean Bateman, Mildred Ruth Ambrose, Chirsteen Ambrose.

Fourth grade: Virginia Woodley, Marjorie Phelps, Blanche Patrick, Eloise Gibbs, Norma Davenport, Edwin Norman, Clyde Smithson, Jr., Jimmie Hopkins, James Harold Gibbs, Lillie Cooper, Dorothy Twiddy, Nettie Hathaway, Violet Ray Furlough, Chelcie Phelps, James Davenport.

Fifth grade: Louise Spruill, Harold Holton, Naomi Haire, Arthur Alexander, Ella Spruill, Eva Liverman, Edna Spencer, Alma Stallcup, Ada Virginia Hopkins, William Davenport, Wendell Haire, Edward Swain.

Sixth grade: Evelyn Belanga, Selma Furlough, Lydieth Halsey, Thelma Roebuck, Billy Liverman.

Seventh grade: Geneva Ambrose, Mary Bateman, Oneida Davis, John Hufton, Harry Walker, Jr., Rachel Woodley.

Eighth grade: Carl Van Davenport, Mabel Gray Woodley, Iris Woodley Spruill, Isabelle Patrick.

Ninth grade: J. C. Gatlin, Billy Wells Bateman, Edna Rae Spruill, Margaret Davis, Marjorie Bateman.

Tenth grade: Theda Hopkins, Evelyn Swain, Callie Davenport.

Eleventh grade: Edward Stillman, Anna Jane Blue, Ada Craddock, Lula Mae Davenport, Vera Snell, Mary Phelps, Jr., Christine Snell.

the so-called tender plants can be planted.

Pepper, tomato, and eggplant can be set in the field. These plants should be hardened off for a few days before transplanting if they have been grown in the hotbed. This can be done by gradually exposing them to the outside weather conditions and hold up on the watering. They should be watered liberally, though, when set in the open.

The crops which are now growing can be rushed along by a light side dressing of nitrate of soda. This applies particularly to the leafy vegetables. To be tender and succulent, leafy vegetables have to be grown rapidly.

If you were lucky enough to have beans survive the recent frosts, watch closely for the first appearance of the bean beetle. These can be controlled with regular and thorough applications of 75 per cent rotenone dust.

In addition to the regular roasting ear corn, let's try some real sweet corn. Spangcross, Golden Cross Bantam, Howling Mob, and Stowell's Evergreen, all are good.

A few cantaloupes will come in fine. Try Honey Rock, Hales Best No. 936, Osage Orange or Hearts of Gold.

Don't forget to spray the home orchard regularly. One or two sprays will not save your fruit. This must be done regularly if you expect to have good clean fruit. If you do not have a spray calendar write for Extension Circular 210, which gives a spray schedule for all the home fruits.

We have mentioned the bean beetle, but there are other insects and diseases we must guard against. Farmers' Bulletin No. 1371 gives full particulars in regard to all common insects and diseases. This is available only from the U. S. Department of Agriculture, Washington, D. C., Division of Publications.

Early Grazing Is Bad for Pastures State Expert Says

First Growth Contains Very Small Percentage of Nutrients

Tender young grass growing in permanent pastures early in the spring looks mighty good, but it's not quite good enough to eat.

The early growth contains only a small percentage of nutrients and
