GENERAL KINSHIP WITH SEA LITTLE CAST ASIDE

a Characteristic of the Whole Human Race.

A kind of kinship with the sea is Terrible Rheumatism-Gained Ten in every one of us, says Boys' Life, the Boy Scouts' magazine. Noah built the ark as a matter of religious duty, we are told. But if old Noah could have written a few lines to go with the half dozen paragraphs of the Bible A. Karnes, a well-known contracting narrative—not for religious effect but plasterer, living at 303 Oriel street, as a man to man, to let us know just how he felt about the job-what a

A landsman, getting ready for his first voyage! Big and important responsibilities to carry, but back of all the study, all the labor, and the "kidding" of his friends, that ecstasy of seemed like the more I suffered the anticipation that grips your throat and

Noah was a "regular fellow." can tell that by the way he "carried "It just beats anything I ever saw on." You bet the fact that he was performing a religious duty didn't make him feel like some folks look in prayer meeting. You bet that when he put aboard the ark one pair of worms, per order, he put in an extra to me that Tanlac is one of the great- few for bait. You bet he had that same hankering for the sea that you

> It's in the very blood of every man. Remember how, when you were a kid, you put your finger in your mouth after cutting it with your first jeckknife? Didn't the blood taste salty? Ask any dector what they put into a man's veins to fill them when he has lost a lot of blood. He will tell you "salt water." Doesn't that prove our kinship to the sea?

Did you ever know even a grown-up to pass a gang in swimming, or a kid with a string of fish, or even a picture of a ship, without stopping a minute to look? It can't be done. We all love the water.

Germany's Labor Army.

"Our growing labor army" is the description applied by the Huns to their prisoners of war. According to a communique in the latest Berlin papers, Germany and her vassals between them now hold 3,575,000 prisoners. For the first time the German military authorities lay stress on the supreme alue of their prisoners as man power for industry and agriculture. They are so numerous, it is asserted, that they go far toward compensating Germany for the men she has had to withdraw from peaceful pursuits for active military service. "The longer the war lasts," the communique adds, "the more adaptable these prisoners become to the work assigned them, and the more useful to us."

Huns have a majestic awe of big figures. Thus it is explained for their edification that the "labor army" in prisoner camps is numerically greater than the whole male working-class population of Denmark, Norway and Sweden combined, "and is equivalent to one-fifth the total number of working men in Germany before the war."

Cherries From Russia.

That the cherry world has its bolsheviki is explained by Frank A. Waugh in the Country Gentleman. Speaking of the supremacy of certain American varieties, particularly the Morello, Montmorency and Early Richmond, he writes:

"Their supremacy has been often challenged. Other varieties have been offered by dozens and almost by hun-

"The greatest competition arose through the introduction of the socalled Russian cherries. These came along with the other Russian fruits, mainly in the importations of 1870 and 1883, and were exploited mainly in the Northwest states.

"Prof. J. L. Budd propagated several of these sorts and recommended them highly. In this company were included Vladimir, Lutovka, Sklanka, Ostheim, George Glass, Double Natte, Those medicines which live for even Lithauer, Brusseler, Braune, Bessarabian, Bunte Amerelle and Spacte and continuous use for over two-thirds Amarelle. There were some others of a century is indisputable evidence of also, bearing the same flavor of northeast Germany and southwest Russia."

"Women can deal with many questions that I cannot deal with," says the Rev. Newton of the City Temple.

Saving Wool Rags.

The answer to the question, "Why should we save wool?" is that a fully equipped soldier uses 13 times as much wool as does a civilian. Also that there are not enough sheep raised to meet the needed wool supply.

Potash From Cement Dust. Extraction of potash from dust is

claimed as a possibility. James D. Rhodes, a Pittsburgh manufacturer, claims to have made the discovery, to erect a large experimental plant adjoining the plant of a cement company at Castalia, O., for the purpose of experimenting for 120 days.

The Castalia plant is in the hands of receiver and it was necessary to get permission of the United States district court before Mr. Rhodes could Saturday night and Sunday with his enter into any agreement with the re- daughter, Mrs. Leon Hubbard. ceiver. This was granted.

Mr. Rhodes said he could extract large quantities of potash for fertilizer from the dust and waste of cement mills that will be of great benefit to the country in increasing the supply. It is understood that the United States government is watching the experiment with interest.

Dogs on the Battlefield.

of dogs as messengers with the armies in the field have, it is stated, given satisfactory results. The dogs which have proved most receptive under instruction are chiefly halfbred collies and retrievers. A rather poor breed of bob-tailed sheep dogs has also done well. All have been during heavy firing, both rifles and over 60 per cent are built of wood. guns. They can be fired over as easily as the ordinary sporting dog, and, what is quite another thing, they will face fire at close range. Many have shown amazing skill in getting over, under and through all sorts of obstacles, including wire.

Destination-Berlin.

H. T. Bennett, a Seymour traveling man, was standing on a depot platform in a Kentucky town while a group of colored men were waiting to entrain, and overheard the following conversation between one of the conscripts and a colored girl who was bidding him goodby:

"Well, Sam, are you goin' with this bunch? I suppose you are goin' to France right soon, ain't you?" the girl

"Not exactly," replied the soldier candidate. "I suppose I'll go through France, but, you see, I'm on my way to Berlin."—Indianapolis News.

FIRES IN SCHOOLS MEAN HEAVY LOSSES

School buildings are just as susceptible to serious damage by fire as other structures, and should be as well built and protected as other buildings. The record of fires in schools Experiments made in the training in Canada shows that, during the last four years, a fire has occurred every week in a public school or residential college. The direct financial loss resulting from these fires amounts to more than \$1,250,000. A careful study of conditions shows that less than one per cent of our schools are trained to perform their errands in any sense fire-resisting and that

The safety from fire of the 28,000 public schools in Canada, in which over 1,500,000 children receive their education, has received little attention outside of cities and towns where building ordinances govern methods of construction.

The people, as a whole, favor efficient fire protection in schools, but when it comes to the question of a single building, the local public almost invariably votes for the cheapest type of construction. Up to the present, loss of life in the schools of Canada has not been such as to arouse a strong public sentiment in favor of improved construction.-J. G. S. in Conservation.
