COME AND BRING THE CHILDREN. WE WANT THEM AS WELL AS THE GROWN-UPS TO SEE TOYLAND. WE HAVE GIFTS FOR ALL THE FAMILY, TOO. HERE ARE A FEW SUGGESTIONS.

FOR THE MEN

- Ties
- House Slippers
- Handkerchiefs
- Hose
- Suspenders
- Shirts
- Suits of Clothes
- Sweaters
- Collars
- Over Shoes
- Wool Shirts
- Books

FOR THE LADIES

- Manacure Sets
- Comb and Brush Sets
- Coat Suits
- Handkerchiefs
- Silk Hose
- Lisle Hose
- Collar and Cuff Sets
- Sweaters
- Ready-Made Dresses
- Hats
- Stationery
- Books

FOR THE CHILDREN

- Boys' Suits
- Boys' Pants
- Boys' Waists
- Girls' Dresses
- Children's Coats
- Knit Caps
- Gloves
- Stockings
- Handkerchiefs
- Ties
- Shoes
- Over Shoes

HUNDREDS OF OTHER SENSIBLE GIFTS TO CHOOSE FROM IN THIS, OUR BEST CHRISTMAS SHOWING.

SPECIAL SALE ON LADIES' COATS AND COAT SUITS UNTIL AFTER CHRISTMAS.

In order to clear up and move out our stock of Ladies' Coats and Coat Suits, we are offering during this Holiday Season a special **Twenty Per Cent Discount** on every Ladies' Coat and Coat Suit in our stock. Nothing reserved.

WE URGE YOU TO SHOP EARLY.

OUTLOOK FOR THE NEXT WHEAT AND OAT CROP

BY CHARLES A. WHITTLE,
Soil Improvement Committee, Atlanta, Georgia.

The approach of wheat and oat sowing time raises a question in the farmer's mind as to the outlook for these crops. It is well known that under the stimulus of Government price an enormous wheat crop has been produced, a crop of approximately 1,200,000,000 bushels.

It is estimated that this country requires 600,000,000 bushels and that Europe will require from 410,000,000 to 460,000,000 bushels. If these figures prove correct, there will be a very little surplus left of the big crop of wheat this country has grown.

Since it appears to be probable that there will be no trouble to dispose of the present crop the next question is, what are the planting prospects for other wheat growing nations?

Of course the nations south of the equator, like Argentina and Australia, that have their summer when we are having our winter, have already sown their fall crops, and will harvest them near Christmas time. These nations have, thus far, good prospects; but they would hardly compare with any two leading wheat-growing states of this country; therefore, they are not important factors.

Russia is the great granary of Europe and Asia. Those who have watched the political trend of that country see nothing but war and paralyzed agriculture ahead another year, if not for several years.

European countries in general are short of labor. Demobilization of armies progresses slowly and the period for fall sowing of small grain in Europe will have passed before any material change can be made through recovery of labor from the armies.

Therefore, there is going to be a continued shortage of small grain in Europe, making it probably necessary for this country to supply as much grain next year as this.

But instead of the nation maintaining its wheat acreage, it is feared the withdrawal of the Government's guarantee will result in a reduction.

In the South it is not only a good farm practice to grow wheat, oats and rye enough for home needs, but it is very desirable, (1) to have winter cover crops that will take up the plant food that would otherwise wash out of the soil with the winter rains; (2) to provide light winter grazing for livestock; (3) to furnish in early spring some fresh cereal hay which will be the better if it has vetch or bur clover growing with it; (4) to furnish vegetable matter or humus to turn into the soil at the spring plowing.

If all the cotton and corn fields were sown to small grain in the fall, it would mean more cotton and corn, better soil, larger returns from fertilizers and greater farm profits.

Too little attention is given to obtaining good wheat, oats and rye seed; too little attention is given to preparing a good seed bed, and too little fertilizers are used in growing the small grain crops in the South. What is worth doing at all, is worth doing well.

WHAT IS ACID PHOSPHATE?

Raw phosphate rock is a substance in which phosphoric acid and lime are combined together in practically the same proportions in which they are found in bone, and which is known as phosphate of lime.

In this condition the lime and the phosphoric acid hold to each other with such a tight grip that the phosphorus cannot be dissolved by water. It will readily be seen that but for such a combination the phosphorus would have been dissolved out and washed to the sea before ever man came to inhabit the earth. But it has been locked up and held for us in this way, just as the coal has been

held under the hills, and in the case of the phosphorus we have been given the key for its unlocking by the use of sulphuric acid, which converts the insoluble rock into a soluble form.

If the soluble phosphoric acid were separated from the lime which carries it and dissolved in water it would be much more inconvenient to handle than to leave it still combined with lime in the dry powder which we call acid phosphate, this lime simply serving the function of a bottle to carry the phosphorus, and saving the much larger expense that would be involved in the complete extraction of the phosphoric acid, converting it into liquid form and providing bottles in which to carry it.—Monthly Bulletin Ohio Experiment Station.
