**POWER PLANT INCOME**

During the month of January a total of \$1416.97 cents was received from the sale of current produced by the Franklin municipal power plant. On this basis the annual income would amount to \$17,003.64. The December income was practically the same, being a few dollar more. At this rate the income from the power plant lacks only about \$1,000 paying interest on bonds. This, of course, does not consider operating expenses which amount to approximately \$5000 per year. The income from water rents will pay operating expenses of the plant. Twenty electric ranges installed in Franklin, in addition to the current already in use, together with the income from water rents, will pay operating expenses and the interest on the bonds. So Franklin is not nearly in such bad shape as some of the growlers would have the public believe.
