

You are Invited to a Special Demonstration of the Westinghouse AUTOMATIC ELECTRIC RANGE

At Nantahala Electric Company's Place of Business
On Main Street, April 12th and 13th.
FRANKLIN LIGHT & POWER DEPARTMENT

The Range with the Clock

You spend a large part of every day in the kitchen—planning, preparing, perspiring—a slave to a stove. Just what you shouldn't do!

Do you know why?

If you'd really like to know, visit our Home Economics Demonstration, and learn how women using the Westinghouse Automatic Electric Range conserve their time and energy.

With a Westinghouse it's possible to prepare a big roast and five vegetables all at the same time—all ready for serving at the same time—all delicious. And one of the vegetables can be onions!

Our expert in charge of these unusual demonstrations will explain how easily and economically this is done, how it's possible to prepare dinner early in the day, go visiting and return at six or seven o'clock, to find the dinner all ready for serving!

You'll like "the range with the clock," the way it bakes cakes—an art in itself. Won't you come in? Some day you'll cook by electricity, so why not begin NOW to learn something about the range you'll want to own?

Now's your chance—without any obligation.

Sanatorium Letter

"A sanatorium for tuberculosis patients is a healthier place to be in than a railroad station," said Dr. Lawrason Brown of Trudeau Sanatorium, Saranac Lake, N. Y., in a statement regarding a study made by him to determine the extent to which danger of infection is present in a sanatorium where the disease is treated.

The investigations revealed that there are millions more tuberculosis germs in a railroad station or similar loitering places where idlers congregate for hours than in a well regulated institution. The patients in a sanatorium are trained by their physicians to protect others against infection and never expectorate carelessly. Persons who work in tuberculosis hospitals and sanatoria are in less danger from germs than the average citizen who is not protected against the spitting menace.

According to Dr. Brown the careless spitter is one of the greatest dangers to public health. Small children are especially open to infection when they play on the streets (gutters), for the germs cling to toys, food and fingers from which they are carried into the system.

HALF CENTURY SINCE THE FIRST TELEPHONE

The first telephone message was sent in 1876, 50 years ago. So great has been the growth of the system that now in 1926, 67,700,000 telephone conversations take place each day. The two telephones of 1876 have increased to 16,000,000 instruments today. The first telephone line of 30 feet has grown to a network of more than 40 million miles of wire; and switchboards, buildings, pole lines, cables, conduits, and other forms of plant have been constructed, costing over \$2,500,000,000.

As President W. S. Gifford, of the American Telephone and Telegraph company recently said, "The advances which have been made during the first 50 years of the work of the Bell System are unparalleled in the history of communication. They are contributions which will make forever memorable this great epoch in our progress. We are now at the beginning of a new era filled with boundless opportunities for advancement in the business and science of telephony. Upon the foundations that have been so securely laid, we can look forward to the telephone system of the future, which in effectiveness and useful service, will surpass all that has gone before."—Industrial News Bureau.

GALLOWAY-ZACHARY COMPANY BUYS FARM

Last Saturday the Galloway-Zachary company closed the deal for the purchase of the farm of Mr. William Ledbetter, consisting of 170 acres on Highway No. 28, three miles west of town. This tract is better known as the old Mallonee farm. The consideration was not announced.

Essig Market

H. O. ESSIG, Prop.

Fresh Meats of All Kinds
Fine Home Made Sausage

Everything kept in a first
class market. Phone 42
