

Dodge Brothers Producing 100 Six Cylinder Cars Daily

Dodge Brothers, Inc. has started production of its new six cylinder line and output is now running at about 100 per day. This number will be increased rapidly and by the end of June daily output will approximate 300.

The first shipments to dealers were made May 11 and by the end of this month all of Dodge Brothers dealers will have been sampled. The company now has orders for the "sixes" sufficient to keep the immense new plant operating at 300 per day for several months.

The new line will be produced in three models, a four door sedan, a four passenger coupe and a new type of cabriolet roadster. Other models will be made later. It is expected that the new line will be introduced about June 1.

The company has found it necessary

to step up production of its four cylinder line twice in ten days to keep shipments abreast of the orders which have been placed since announcement of the new four cylinder motor and standard gear shift was made on May 1.

During the first week after the new motor was introduced orders for cars valued at \$5,500,000 were received. These were in addition to regular contractual allotments.

All of the Dodge Brothers factories are now operating at the highest levels of the year and it is expected that still further increases in operations will be necessary.

Graham Brothers April retail sales in the United States and foreign shipment totaled 5600 units. Overseas shipments last month totaled 1084, an increase of 188 per cent over March and the second highest month in Graham Brothers history. In Canada Graham Brothers April sales broke all previous records.

Overseas shipments of Dodge Brothers cars established a new high record in the company's history on May 5.
