Profits And Fertilization

It is just as much work to prepare a seed bed, plant and cultivate an acre of corn which yields forty bushels to the acre as an acre which yields one hundred.

You use the same plows, harrows, and cultivators. You can guess the reason for the difference. Yes, one crop was properly fertilized, the other unfertilized.

Your profits come from making the soil produce the maximum of quality crops. You are working for these profits so why not get them?

Armour's BIG CROP Fertilizers work for profits. They are made from the highest quality plant food and come to you in concentrated form. You are not paying for any useless bulky filler.

We can help you in deciding the analysis which is best suited to your needs. Let's talk it over.
