tawba County agent, received this query from a farmer, and here is his answer: "A little figuring might help out in this matter. It will re- sal. quire about 115 to 120 ears of hybrid corn to produce a bushel of corn. If you plant your corn in 31/2 foot rows, you will have to space it about 15 inches in the row in order to get 10,000 stalks to the acre. These 10,000 stalks should furnish you with enough ears to make 100 bushels or more."
