

**Birth Announcements**

Mr. and Mrs. James McLain of Oak Ridge announce the birth of a son, Michael James, on Wednesday, June 9, at the Oak Ridge hospital. Mr. McLain, formerly of Sylva, is the son of Mr. and Mrs. F. N. McLain.

Mr. and Mrs. William R. Hupman of Mebane announce the birth of a daughter, Mary Susan, on Tuesday, May 8. Mrs. Hupman is the former Miss Mary Kathryn

**Play Safe In Water, County Agent Urges**

"Safety precautions in swimming or boating may save a life and that life may be your own. Remember, always play safe in water." This commonsense advice was suggested today by County Agent M. L. Snipes of the State College Extension Service.

With the opening of the water Monteith, daughter of Mr. and Mrs. H. E. Monteith.

**STATE COLLEGE ANSWERS TIMELY FARM QUESTIONS**

**QUESTION** — When should lime be applied to pastures?

**ANSWER** — At any time when labor is available and you can get on the field with the spreader. However, if there is danger that the limestone may wash away, it should be put on at a time when this danger is at a minimum.

**QUESTION** — What are the most practical types of silos?

**ANSWER** — Permanent silos are of two types. The upright tower silo, which is more common, is usually cylindrical. Its diameter usually ranges from eight to 20 feet, and its height from 30 to 50 feet. The other type is the trench silo, which may or may not be underground. It ranges from a width of five to seven feet at the bottom, and seven or more feet deep, to any suitable length. The important thing is that it must be well-drained.

**QUESTION** — Is the mulching of new pasture seedings advisable?

**ANSWER** — Yes. Spreading a small amount of manure or straw per acre is valuable in protecting new seedings.

**QUESTION** — Where can I obtain information on termite control in houses?

**ANSWER** — Write your Congressman or the U. S. Department of Agriculture, Washington 25, D. C., and ask for Farmers' Bulletin 1993, "Decay and Termite Damage in Houses," a new publication which suggests yearly inspections to determine possible decay and

sports season, the National Safety Council makes some positive recommendations based on research and study into the water safety problem. Swimming is fine exercise for those in proper physical condition, but if you are not feeling well, stay out of the water, especially deep water. Also, take it easy at the beginning of the season until you are in good condition.

Wait for a time following meals before entering the water and do not swim if overheated. Take sufficient time to cool off before going in the water even though the temptation may be great. It is advisable to swim only with a good swimmer or lifeguard.

Avoid exerting beyond your strength and never dive into strange water where the depth and condition of the bottom are unknown. If possible, take a few lessons in life saving—it may prove to be a great advantage some day.

Mr. Snipes pointed out that one does not need to be a "landlubber" with a canoe, rowboat, or outboard motor. Needless tragedies can be avoided by using good judgment. The National Safety Council recommends the following safety precautions.

Never overload your boat. There may be seats for more people than the boat should carry.

Know and heed weather signs and avoid staying out in storms. Always step into the center of a boat—never jump; and never stand up in a moving boat.

Never smoke while fueling. Make sure your motor is not too powerful for the boat.

In case of capsizing, stay alongside the boat and hang on to the side but don't try to climb in. A boat with air tanks will stay afloat indefinitely and will support several persons. Relax, be calm, signal for help and wait for it to arrive.

(By Ruth Current)

State Home Demonstration Agent

Entomologists advise DDT protection after cleaning clothes closets. Apply a DDT spray to walls, woodwork, baseboards and shelves as a protection against clothes moths and carpet beetles for the warm weather season. An oil spray is best for this purpose because it does not leave a white deposit as a water spray does. It should be a residual spray rather than one of the so-called aerosol bombs or space sprays if it is to be effective over the months in killing insects which come in contact with closet surfaces. Aerosol sprays kill flying insects or those which happen to be exposed at the time but they are without lasting effect because they leave little or no residue.

DDT solutions also may be sprayed lightly on wool clothes without injuring the fabric. Too much of the solution may show up in whitish traces on dark clothes but these can be removed by brushing or dry cleaning.

DDT spraying is useful for protecting clothes hanging in closets while the more familiar moth flakes or crystals are advised for clothes stored in tight bags, trunks or other containers where a fumigating effect is desired. Added protection may be given to stored clothes by spraying them and their con-

termite damage to the wood parts of houses. The bulletin was prepared by forest pathologists and entomologists of the U. S. Department of Agriculture. It contains many helpful photographs and drawings.

**PERSONALS**

Mr. and Mrs. S. T. Crisp of East Flat Rock spent last week here visiting relatives.

Mr. and Mrs. Joel M. Bird spent the week-end with Mr. Bird's daughter, Mrs. Albert C. Shuford and family in Brevard.

Dr. and Mrs. Robert L. Gamewell and two children have returned to Murfreesboro, Tenn. after spending a few days with Mrs. Gamewell's parents, Dr. and Mrs. W. P. McGuire.

Bobby Hall left last Tuesday for Florence, Ala. where he joined his aunt, Mrs. W. E. Moore, and went to California with her. He will spend a few weeks there before returning to Sylva.

Lt. Colonel and Mrs. Henry G. Brady and two children left Sunday to return to their home in Sacramento, California. Col. Brady has been in school in Selma, Ala. for the past month and Mrs. Brady and the children spent the time here with her parents, Mr. and Mrs. E. E. Bain.

Mrs. H. E. Monteith has gone to Mebane to visit her daughter, Mrs. W. R. Hupman, and family.

Miss Dorothy Sue Tallent spent the week-end in Atlanta, guest of Misses Dot and Anne Warren.

tainer with DDT.

The entomologists point out that carpet beetle larvae are killed more slowly by DDT than are clothes moths and some other insects. They may not die until 10 days or two weeks after their first exposure to DDT but during this time they will stop their destructive feeding. In spraying against carpet beetles, apply plenty of the solution to cracks and around baseboards where these insects frequently live. A 10-percent DDT dust blown into these cracks gives added protection.

## What's the Hottest News in Cars since the Self-Starter?

FOR the answer to that, just ask any man who drives a Dynaflo Buick.

He'll tell you, you haven't seen anything yet — until you slip behind a Dynaflo wheel and see for yourself what this new drive does.

It isn't merely that it's easy — though all you do in normal driving is set a lever, press the gas treadle, and steer.

It isn't merely the "stunts" you can pull, such as coming to a dead stop on a steep hill, then moving smoothly away, just by the way you manage the gas treadle.

The important thing is that Dynaflo Drive\* marks a basic change in the way power is delivered from the engine to the rear wheels.

The idea of passing through a series of gears in fixed stages, either manually or by mechanical means, is gone entirely.

Instead, spinning oil is so cunningly directed and controlled in

the Dynaflo unit that it instantly shapes engine power to fit any normal driving need.

When you start, it steps up engine "torque" like a low gear to give you swift, surging getaway.

When you accelerate or climb, it fits the pull of the engine to that particular job.

When you cruise on the level open road, it delivers power with a flowing smoothness that is far silkier than the normal high.

You have manual control of direction simply by moving a lever. You have reserve braking power in reserve at your command — and for emergency pulls.

But there is never any clutch-work — there is no clutch-pedal. And never any gearshifting in the old

sense—your power plant does what the forward gears used to do.

Right now, of course, Dynaflo Drive is available only on Buick ROADMASTER models.

Go find out about it, at the nearest Buick dealer — and be ready to put your order in, whether or not you have a car to trade.

\*Optional at extra cost on Roadmaster models only.

**BUICK alone**  
has all these features
