JACKSON FARM BRIEFS

Henry Stegert of Erastus is carrying on a good farm program. Besides his cash crops of cabbage and potatoes, he is gradually increasing his livestock income. He is doing this in a sound way by increasing his feed crops and improving his pasture. Mr. and Mrs. Stewart also carry on a good live-at-home program. This year they have built a new can house.

Vardie Sneed of Norton plans to try one acre of strawberries next spring. This is pointing the way to a new cash crop to supplement cabbage and potatoes. By using the right practices in growing them, Mr. Sneed and his family should receive a good income from this project.

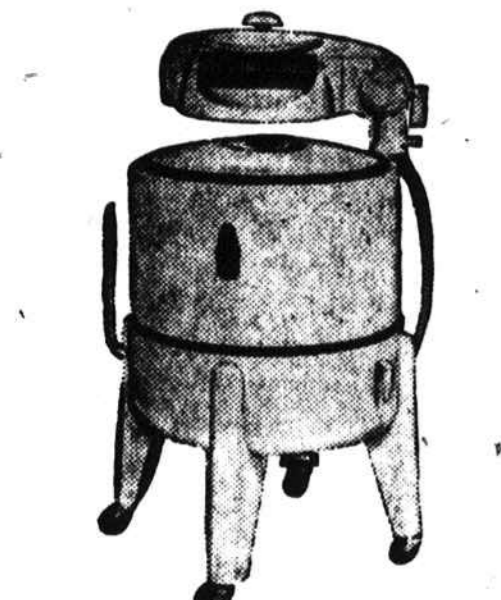

Lyda Moses of the Glenville section realizes that better farming calls for more livestock coupled with pastures and other feed crops. This takes some of the risk out of the farming business by getting income from another source.

Tobacco curing is a complex operation which varies with the type of tobacco, the season, and the fertilizer program.

STATE COLLEGE ANSWERS TIMELY FARM QUESTIONS

QUESTION — What are the symptoms of X-disease in cattle?

ANSWER — Early symptoms include a watery discharge from the eyes and nose. As the disease develops, the animal's appetite fails, it loses condition, and becomes depressed. The skin gets thick, wrinkled, hard, and leathery. Large wart-like projections often occur on the tongue, cheeks, and palate. Stockmen sometimes confuse it with such things as pink eye, cobalt deficiency, Dallis grass poisoning, and scabies. However, correct diagnosis is not difficult for a veterinarian who knows the disease.

QUESTION — How can I be sure of having a supply of fresh garden greens in the spring?

ANSWER — By keeping greens alive over the winter months, says Miss Ruth Current, State home demonstration agent. She adds that Mississippi Experiment Station workers have demonstrated that plants kept alive over the cold weather will make a second growth of leaves in the very early spring, before other garden vegetables are ready. These greens can furnish

Do birds fly as high as 8,000 feet? YES.

STATE COLLEGE HINTS TO FARM HOMEMAKER

State Home Demonstration Agent

Home economists say there is an element of chance in washing rayon if the label carries no facts about its washability, or if the sales clerk was not too specific in giving such information. Never let your rayons become extremely hard and never soak or boil them. If specifically labeled for "all-purpose" soap, use a mild soap on rayons. When there is a "go-ahead" signal for washability, very little ampering is necessary. You may, of course, wash it by hand. But if the seams are well-finished and well-tailored then there is no reason for not machine-washing it. Warm water about 105 to 110 degrees F. is very effective as most rayons clean easily.

Rayons require a relative short washing period — 2 to 4 minutes is sufficient — for protection of the fiber which is weaker when wet. Short periods are usually effective for filament rayons because their fiber tends to resist soil and cleans easily. The washing action of the washer must be gentle. Rinse rayons thoroughly but speedily. Avoid unnecessary wringer.

Important vitamins for family meals. The Mississippi tests provided that the second growth from plants which have wintered over rates as high generally in carotene (vitamin A), vitamin C, and two B-vitamins, thiamine and riboflavin, as the leaves from new plants in the fall.

QUESTION — Should housewives continue their fat salvage campaign?

ANSWER — The answer is yes. The fat salvage program, in effect since 1944, has been remarkably successful and has resulted in the saving of millions of pounds of critically short fats and oils. The general supply situation has improved in recent months. However, it is expected that millions of housewives, who have found the salvage program a convenient and profitable way to dispose of waste fats, will continue to save this material. The program is basically one of conservation. The fat salvage habit is a thrift habit which brings financial return to the housewife and prevents waste.

Agent Lists Steps To Stop Barn Fires

A four-point program to save barns from destruction by fire during November was suggested here this week by M. L. Snipes, county agent for the State College Extension Service.

Mr. Snipes said records of the Fire Protection Institute show that approximately 1,500 barns in the United States were either damaged or destroyed by fire in November, 1947. Losses are unusually heavy during fall and winter months because so many harvest crops and so much valuable farm machinery are stored in barns at that season of the year.

"If farmers will take a few simple precautions and install approved fire extinguishers, barns in this county will be comparatively safe from fire during the winter months," the county agent declared.

He said barn losses from fire can be reduced 80 to 90 per cent through the following program:

1. Keep barns clean. Make sure rubbish is not allowed to accumulate in or around buildings.
2. Check all electrical wiring. See that switches operate properly and no wiring has been stripped of its insulation.
3. Have adequate fire protection. Most fires start small. If approved fire extinguishers are handy, fires can be put out quickly, before they get out of control.
4. Store flammable liquids in safe areas. Make certain that flammable liquids are placed in sealed containers and out of reach of children and animals.

CARD OF THANKS

I wish to express my thanks and appreciation to my friends who were so kind during the illness and death of my mother, also for the funeral floral offerings.

Tom Moss, Jr.

AUDITOR'S CERTIFICATE

We have examined the accounts of Jackson county, North Carolina, for the fiscal year ended June 30, 1948, and have submitted to the Jackson County Board of Commissioners an audit report embracing the year ended at the date mentioned.

The foregoing balance sheets and statements of fund operations, in our opinion, present fairly the financial condition of the several funds at the dates captioned, and the result of operations during the years mentioned, subject to specific comments contained in the audit reports now on file with the Finance Commissioner.
