

seeding will be about the same for rape too closely grazed, for such would both. The hogs will harvest the rape crop, while the corn must be harvestbe remembered, however, that the acreage of rape that can be profitably utilized for pasturage on the average farm is limited, it usaully not being more than two or three acres

In feeding experiments at the Alabama Station running for 147 days (November 9-April 5) with pigs weighing approximately 45 pounds each at the beginning of the experiment, it was found that the two lots of pigs fed on a ration of two 'parts of corn and one part of wheat shorts and allowed the use of a rape pasture during the period, produced pork on an average of 34.4 per cent less cost per pound, counting the cost of providing the rape pasture, than did another lot fed on the same ration and confined in dry lots. In other words, the lots fattened on rape pasture, supplemented with the necessary amount of the ration of corn and wheat shorts, made very satisfactory profit, while the lot fattened on the ration of corn and wheat shorts alone in dry lots afforded little or no profit.

Soil and Its Preparation.

Rape is best adapted for growth on a deep, rich, mellow, loamy soil that is fairly well stored with humus. It does not do well on the very light sandy or stiff clay soils because they are deflicient in organic matter. Any soil that will produce wheat and corn well will be found suited for the growth of rape. In preparing the land it should be well broken, then thoroughly harrowed into a fine, clean seed bed, as is usually done for turnips or ruta-bagas. If the land has a liberal application of manure the previous year, so much the better. On average land it will be well to apply broadcast over the land, just after breaking and before harrowing, about 300 to 500 pounds per acre of a fertilizer containing 8 to 10 per cent available phosphoric acid, 4 to 6 per cent potash, and 3 to 4 per cent nitro-

Seeding.

For the Coastal Plain and Pledmont sections, the apring seeding may be made during March or early in April. and the frill seeding any time between August 2: and October 15. In the monutain section the spring seeding will have ... The made in April and the fall seeding during the latter part of buy or sarly in August in order to in our tests to be the landing rly in August in order to muits. The rape seed are

prove fatal to the plants and the life of the pasture would thereby be maed by the farmer himself. It should terially shortened. After being grazed, the plants should be given an opportunity to get well started into growth before being grazed again. By dividing the field into lots these may be pastured in succession. If sown on good land and properly handled one acre of rape will provide grazing for ten or twelve hogs for something like two or three months or more.

CREASE THEIR CROP.

tained in a certain deed of trust made Indications are that the price of by C. A. Creed and wife Lular Creed, wheat, and hence, of flour, is to be to the unndersigned trustee dated Feb-

high during the next year. This will ruary 11th, 1916, and duly recorded in naturally cause a planting of an in- the office of the Register of Deeds for creased acreage of this crop. Under Haywood County, North Carolina in normal conditions this would not be a Book V page 565, default having been promising situation under which to made in the payment of the indebtedadvise the growing of more wheat: ness secured by said deed of trust whereility fix a minimum price for stand. by the power of sale therein contained but since Congress will in all probabard grade wheat at primary markets has become operative and demand havof \$2.00 per bushel it certainly seems ing been made by the holder of the notes, the undersigned trustee vill on to be advisable this year. Tuesday October 30th, 1917, at twelve In the Piedmont and mountain sections of the State, wheat growers o'clock noon sell at public auction for should increase their acreage to some cash, at the Court House door in extent at least. . Those who have not Waynnesville, Haywood County, N. C., grown this crop previously in this the following described lands and prem portion of the State might do so with ises: Beginning at a stake in the west safety, and in all probability put in margin of Phillip street, the common few acres to good advantage to corner of lots 23 and 24 and runs thence provide for the needs of the family, with the west margin of Phillip street On some of the more compact with the west margin of Phillip street eastern soils, also wheat might be North 100 feet to a stake, the common grown during the present high prices corner of lots 21 and 22; thence with the with fairly satisfactory results. Or- line of lots 21 and 22 west 150 feet to a dinarily we would not recommend the stake, the common corper of lots 9-10-21 growing of this crop but very little, and 22 and thence south with the, line if any, in the Coastal Plain Section of lots 9-8-22 and 23 100 feet to a stake, of the State because this portion of the common corrier of lots 7-8-28 and the Coastal Plain and Pledmont the State is not nearly so well adapt ns, the spring seeding may be ed generally to it as the Western half 24, thence east with the line of lots 22 and 24 150 feet to the beginning, being

lots 22 and 28 Block "A', of the N.W. Fain property at Canton, N. C. and the same land this day conveyed to the partigs of the first part by N. W. Fain and wife. his September 24th, 1917. ber 24th, -1917.
