"Ah sho' did, Massa Ke'nol; ah sho' did," replied Rastus. "But lately ah dun took up drinkin' an' gib up lyin'.

Youthful Diplomat.

Lola, five years old, wanted a pair of skates, but she was very naughty in school, and always seated in the last row, father would not get them for her. He compromised, saying that if she were bright enough to get in the first row she could have them. A week later she came home saving she was in the first row. Father said: "Fine! How'd you do it?" Lola said: "I told teacher I could't see the blackboard from way back there, and she put me in the first row."

Doing Things by Halves.

An old woman of enormous size hailed a tram-car, and with considerable difficulty managed to climb up and get a seat inside. When she was comfortably settled she looked at a man sitting opposite nad said: "If you'd been 'arf a man you'd 'a 'elped me in." He gave her a sad smile and replied: "If you'd been only 'arf the woman you are I might 'ave 'ad a try."

The Right Kind.

"What a queer costume the leaping athletes wear." Why, what kind would you have

them wear?" "Oughtn't it to be jumpers?"

Plant lots of annuals this year. They cost little and they make the whole world happier.

The Busy Bee.

fowl that pays us as big dividends as deal of land which does not pay to the honey bee. She works for noth- cultivate, and which is only used as ing, boards herself, supports her an occasional sheep walk. On such ne royal male harem, fer tilizes the blossoms for miles around, and frequently furnishes us with ways able to find some animal or vege

large cities, as well as in the country. roam. We have seen a number of hives on roofs of buildings, etc., where the owners had no other space available, and the bees will do just as well there as on the ground provided the hives are shaded from the hot sun.

Your success in keeping bees deis the food supply. They gather their food in the form of nectar and pollen from all sorts of blossoms. The nectar is eaten by the bee, undergoes certain changes, and is stored in the comb as finished honey. The pollen is treated in a somewhat similar manner, and is worked over into bee bread with which the young are fed. A fairly constant succession of flowering plants must be available for your bees, and there must be enough of these flowers so that the bees can gather more honey than they need. Remember that you don't get any honey until the bees have all they need. You get the

surplus only. Before you buy a hive of bees look over the territory within a radius of a mile and size up the feeding possibilities. If there are considerable amounts of clover you are safe. Sweet clover, fruit trees and bushes, basswood and mustard, buckwheat and flax are heavy honey bearers. Of course, ornamental flowers do their share, bu

they are of much less importance. If you find plenty of feed without too much competition from other beekeepers, your next step is to secure a good standard beehive with a strong colony of Italian bees and a tested Ital-ian queen. The eight frame Langstroth hive is an excellent one for the begin-ner. While your bees might be secured cheaper from some farmer, it is easier to have them come right in the hive at the start. The complete out-

hive at the start. The complete outfit will cost about \$15.

Most people can handle Italian bees
without the slightest danger of getting
stung, after a little practice. Before
then, it is well to use a bee veil and
tie your sleeves tightly.

Tour colony will increase from one
to five hundred per cent, each year,
and each colony will produce from
fitteen to a hundred pounds of honey,
depending upon the senson. It will
not take ten minutes a week to care
for them, but you must spend a lot
more time than that watching them,
as they are most interesting in their

will be lots of surplus cucumbers to

pickle, as well. They are planted by seed as soo as the spring weather is reasonably settled and the first edible cucumbers may be counted on about ninety days after planting.

The first important consideration is the soil. Cucumbers, like all of the cucurbitaceae, love a light mellow soil and a sunny location. They belong to a semi-tropical desert class of plants and sunshine is much more important than water, although both are necessary. The soil immediately adjacent to the seed hill should be very rich with well-rotted compost or manure. An excellent plan is to dig out the soil to a depth of eighteen inches and fill in with compost and richer soll. A fine mixture is one part wood ashes, two parts sand, one part manure and two parts rotted sod or black loam.

Where space is unimportant, plant the seeds in hills six or eight feet window boxes, etc. They are no less apart, twelve seeds to the hill. Plant hardy than perennials, and they are an inch_deep and firmly cover the seeds. If desired a box frame may be placed about each hill and a pane of glass fitted over it. This will force month earlier than is otherwise posbe taken that the glass is raised when the sun is hot, or trouble will result. Where used with late plantings and better to replace the glass with cotton

> Remove the boxes as soon as the plants send out, runners and thin out to the four sturdiest plants in each hill. The striped beetle is the only serious pest and must be guarded against. It attacks the young plants with powdered white hellebore. Another old-fashioned remedy is a thin plaster of cow manure over both plants and soil. Do not thin out any

The usual plan is to let the vines grow over the ground at their own tions as nearly like their natural ones sweet will. The better way, espetrain them up on a trellis or wood forms if you would secure best results. and wire framework. This saves Annuals may be planted as soon as ground and improves the fruit as the vines are not crushed in gathering the cucumbers. Cut off yellow leaves with sharp shears and always cut the recommended: Scabiosa, Balsam, Cal- fruit off instead of pulling or twist-

Frequent applications of liquid manure to the roots will work wonders and this practice cannot be too highly recommended for all the later garden plants. White Spine and Long Green are excellent American varieties.

PLAN FOR FATTENING GEESE

Fowls Do Remarkably Well on Quite Poor Soil, Finding Some Animal or Vegetable Food.

Goose keeping is a branch that should appeal especially to those who have plenty of land available. It is a mistake to attempt to keep either breeding stock or goslings up-

on a very limited area. An English writer says that upon hundreds of farms scattered up and There is no domestic animal or down the country, there is a good

however poor the soil, they are alenough honey in one year to buy the table food therein. Besides they entire hive, bees and all, twice over, quickly make a great difference in the Hives of bees are frequently kept in quality of the soil over which they

To fatten young geene place them in a pen not too large, so that they will not exercise too much, and feed three times a day all they will eat up clean.

good fattening formula is corn meal mixed to a dry crumbly state. pends upon one main factor, and that and beef scraps amounting to 20 per cent of the bulk of the corn meal.

While fattening young geese they should be kept as quiet as possible; no excitement whatever should dis turb them. When feeding approach them quietly and do not irritate them in the least, or they will not fatten, but instead, grow another crop of feathers.

At ten weeks of age, or when the tips of the wings reach the tail, they are ready for market, and should weigh between eight and ten pounds

Paper money is said to have had its origin in China in the year 806, when the government issued it to relieve a financial stringency, receiving coin in return, which enabled it to pay off outstanding obligations. In the mu-seum of St. John's college in Shanghai

Oats for Hog Feed.

Oats as a hog feed has never been very popular for two reasons. First, the price is usually too high; and. second, the feeding value is not so great per pound for hogs as that of corn. When the price declines so that the cost per pound is less than corn the attention of hog raisers is immediately attracted to its feeding value.

It Was Only for Moving Picturesbut Passengers Thought It Real Thing.

By FRANK FILSON.

The journey across the desert is not a distracting one, and any diversion is gladly welcomed, so that, when the flashily dressed man stood up at the end of the Pullman and began to address the passengers, everybody went forward and gathered around him, laughing and clapping. They thought he was going to offer something for sale. However, he had nothing to sell.

attentively. "Ladies and gentlemen," began the fashily dressed man, "I am going to when the wheels of the train began repeat to you what I have just said to to move. The flashily dressed man the passengers in the next coach, caught the young lady by the arm and When we reach Bad Water, in ten swung her aboard. Inside the travelwill be upon the platform to take

some pictures representing a hold-up. Some of the performers, dressed as bandits, will attack the mail car, while others will go through the coaches, demanding your money and valuables. But please do not be alarmed. The have had to scare you. We ain't banwhole proceeding will be in pantomime, and if you will make a show of ple; but we had to get the picture and as you wouldn't help us-why, we just compliance, and so ald us, nobody will be annoyed. I ask of you, fellow-pashad to help ourselves. Good-bye. sengers, to feign alarm, and if one or two of the ladies will pretend to faint it will help things along."

Everybody began laughing and eagerly awaited the stop at Bad Water. This was the fourth day of the trans-continental journey, and the passengers were on very good terms with one another. They began to discuss

train robberies. "I'd never give up a cent," exclaimed a stout, perspiring drummer, wiping the alkali dust from his features. "Not for all the train robbers in California. No, sirree, and don't mistake and San Francisco. me. I'd duck their pistols and hit out once or twice and then-well, there wouldn't be any train robbers."

'Well, as for me, I know I should just faint," answered a demure young lady. "And before I fainted I'd just hand over everything I had." "Not with me around, you wouldn't

need to," answered the drummer gallantly.

The other travelers did not commit

"Hands Up, You Silly Sheep!"

train began to slow down and there appeared the irrigation ditch from with less than 10; North Carolina, which the station took its namel Then the little tin-roofed shanty came into view, and a moment later a half dozen men, wearing sombreros and mask- than 20; Missouri, 705 with less than ed, with pistols stuck all around their 12, and 2,500 with less than 20. waist lines leaned forward across the tracks. One jumped into the engine cab and held his pistol to the forehead of the engineer. The mail van was next attacked, while two men made their way into the foremost of the coaches.

Upon the platform a moving picture operator had set up his instrument and was busily reeling off the film, the passengers, interested in the scene, gathered around him.

"Now, ladies, now, gentlemen," in terposed the flashily dressed man in tones of remonstrance, "won't you please go back into the coaches and be robbed? You're interfering with the operator. It spoils the reality of the pictures, your standing round here as though nothing had happened. People will think the picture's a fake, and it's going to be exhibited in all is a paper bill worth 1,000 cash, the the leading cities of America. Won't

Two or three did turn back toward the coaches in a half-hearted way, but the rest remained obdurate, and the fiashily dressed man ran here and there among them, remonstrating and pleading. His requests, however, fell on deaf ears. It was much pleasanter outside in the fresh air than within, and, besides, all wanted to see the whole proceedings. At last, in despair, the fiashily dressed man threw up his hands and disappeared inside one of the coaches.

Almost simultaneously a pistol shot rang out, followed by a woman's scream for help. The heads of the spectators turned round with a simultaneous movement and their features betrayed an expression of sudden fear. flashily dressed man ran here and

"You told me it was fun," shricked a woman's voice. "I won't give you my rings. I won't, I tell you. There, take them, then. And that's every penny I have in the world."

"It's Big Ike and his gang," some-body screamed. It's real enough! My God, It's all real!"

Then the flashilly dressed man came dashing out of his ceach, a smoking rate! In his hand. He was followed.

two of the gang.

minutes or so, a moving picture man ers stood huddled together, but there was no bandit to receive their cash The flashily dressed man stood on the step and leered at them. "Sorry to frighten you all, ladies and gents," he said. "If you'd obliged me as I asked of you to do, I wouldn't dits; we're just moving picture peo

> And as the train was now in motion he leaped to the ground and stood smiling at them. When they had resumed their places

there was quite a long silence. Then the drummer spoke. "I knew it wasn't real," he said. "If

I'd thought it was I'd have acted different." He smiled at the demure young lady. But she was reading a text-

book on the Montessori method of

teaching the young, and she never

looked up at him between Bad Water (Copyright, 1913, by W. G. Chapman.)

RURAL TEACHERS' PAY SMALL

Average Pay Is Less Than That Received by Street Laborers in Cities.

The statisticians tell us that the average salary of the teachers of the nation in the common schools is less than \$400 a year, and in the rural school districts less than \$300, the Hon. David Franklin Houston, secretary of agriculture, writes in Leslie's. Illinois reports rural salaries ranging from \$250 to \$400; Kansas, a salary of less than \$250; Missouri, Mississippi and Tennessee, one of less than \$250; Vermont, Maine and North Carolina, one of less than \$200. In urban communities it ranges from \$500 to \$600 to \$1,800 or \$2,000 or more. The annual compensation of rural teachers is less than that of street laborers in cities, less than that of bricklayers, plasterers, carpenters, plainters and brakemen, and the superintendent of Alabama reports that in that state it is less than the average earnings of convicts. Everywhere these teachers are

stranded in one room buildings, for the most part unsightly, devoid of the ordinary comforts, lacking in facilitles, in unattractive and insanitary and hold 30 to 35 or 40 recitations a day for four, five, six or seven months a year, and do this without advice or assistance from competent supervisors or inspectors. Illinois reports 10,600 one teacher schools 1.150 of them having less than 15 pupils; Kansas, 7,800, 425 with less than 15 pupils, 300 more than 4,000 out of a total of 5,400; Indiana reports 1,085 schools with

less than 15 pupils, and 2,000 with less

When the people know the facts and are intelligently led they will face the situation, provide the means and will regard the expenditure for developmental purposes not as a burden but as an investment. They must put more money into this business of rural education to save what they have already put in-to make good what they have undertaken. As people of ordinary business sense, they must recognize the necessity of efficiency of production. A nation which is spending \$700,000,000 a year on war, past and future, \$800,000,000 for tobacco, and \$1,500,000,000 for whisky cannot make the plea of poverty and cannot afford to say that it will stop at an expenditure of \$330,000,0000 for

Explaining the Explanation. The chemico-physical explanation of The chemico-physical explanation of the universe goes but a little way. These are the tools of the creative process, but they are not that process, nor its prime cause. Start the flame of life going, and the rest may be explained in terms of chemistry; start the human body developing, and phys-lological processes explain its growth; but why it becomes a man and not a monkey—what explains that?—John Burroughs, in the Atlantic,

U. S. Expedition Finds Last Rookery of Elephant Seals.

Huge Animals, Thought to Be Extinct Are Found on isolated leland of Guadalupe by Party Headed by Dr. C. H. Townsend.

New York.-Naturalists all over the world are greatly interested just now in a beach some 400 yards long by 30 in width on the isolated island of Gaudalupe. Here on this remote and uninhabited island, lying in the Pacific ocean, 140 miles off the northern part of the peninsula of Lower California, has been discovered the only rookery left and the last standhold on the western continent of the northern elephant seal. This is the largest of all seals, long since thought to have dispeared, and likewise one of the most remarkable marine mammals existing

Aside from its great size, 16 feet and more, the chief feature of interest of these animals is centered in the strange appearance of the head, caused by elephant-like trunk or snout, mean uring in the adult males nearly a foot or more in length. The rediscovery of this, the only herd of northern ele phant seals living today, was made by Dr. Charles H. Townsend, who com manded an expedition on the United States Fisheries Steamship Albatros to Lower California to study the fishery resources and to obtain specimens of this region

Being valuable for its oil, the ele phant seal was killed in large numbers for commercial purposes until it was thought to be practically extinct The oil is worth about 50 cents a gal lon. A 16-foot elephant seal is said to yield from 200 to 250 gallons of oil. The colony of seals found by Dr. Townsend was scattered in family groups along the beach, and watched the landing party in their boats with apparent indifference. The herd consisted chiefly of large males, females, yearling and new-born pups. A number of adult females were surrounded by newly-born young, and the indications were that the breeding season was just commencing at this time of year, which was March, and therefore it was thought that other adult females would arrive later.

The seals had little fear of man, which afforded unusual opportunities for securing close-range photographs showing them in their various attitudes. Unless actually teased by the members of the party the old animals did not attempt to leave the beach

Great Seal of Guadalupe.

and many of them did not raise their heads from the sand until closely approached, although wide awake. When driven from a comfortable resting place they would soon settle down, and, after throwing sand on their backs with their front flippers, become quiet again. Both young and old have the habit of covering themselves with sand when settling down to rest. The females, although but little molested. appeared to be even more passive than the males. Some of the large males after being driven into the sea soon returned.

The most striking and remarkable feature of this animal, and from which it takes its name, is a curious elongat ed trunk or snout which attains a length equal to the remainder of the head. This thick and heavy appendage has a length of ten inches or m forward from the canine teeth and is fibrous and fieshy throughout. When fully expanded it exhibits three bulging transverse folds on top separated by deep grooves. The trunk is not capable of inflation, but is retracted into heavy folds on top of the head by muscular action. This snout is some what protrusible, but when not elongated hangs in a pendulous fashion over the mouth; when sleeping it rests upon the sands, a shapeless

Judge's Pullet is Some Layer. Tarrytown, N. Y.—Judge Robert P. White owns a buff pullet of remarkable egg-laying ability. A few da ago D. C. Paulding, a fancier, ma the statement that he owned a hen that had laid \$35 eggs in the year ending January. 31. Judge White came back at his neighbor with the statement that his pullet had laid 287 eggs in the year from Feb. 7, 1912. Judge White says the hen is the only one he has.

Home-Made Remedy Kills Patient.
Norristown, Pa.—Constantine Todd, twenty-five years old, after suffering from a cold for several days, purchased a pint of whisky, several lemons and onlone, and made a cold remedy. He drank nearly all the concoction and went to bed. Todd's mother discovered his dead body the next morning. The coroner decided that heart failure was caused by the excessive use of whisky.

RESINOL CURED

Whole Face Covered, Now Clear. Brooklyn, N. Y., Oct. 9, 1912. "I was troubled with two or three pimples coming out on my chin. In a week or so my whole face was covered with them. Friends advised me to use dif-ferent lotions and salves. I tried them, but they did me little good, if any, I but they did me little good, if any. I finally washed the pimples with Resinol Soap and applied Resinol Ointment before going to bed. In the morning I found the swelling gone down, and the inflammation gone from the pimples. I tried this treatment for about a week, and found that most of the pimples had disappeared. I kept the treatment up for about a month, and then my face was clear of all pimples. I have used Resinol Soap since and find that the pimples do not come back." (Signed) Walter A. Stenstrum, 54 Willoughby Ave.

If you are suffering from itching, burning skin troubles, pimples, blackheads, dandruff, stubborn sores or piles, it will cost you nothing to try Resinol Ointment and Resinol Soap. Just send to Dept. 13-K, Resinol Baltimore, Md., for a free sample of each. Every druggist sells Resinol.

Every druggist sells Resinol.
