BEAUTIFY YOUR HAIR

Make It Thick, Glossy, Wavy, Luxurlant and Remove Dandruff-Real Surprise for You.

Your hair becomes light, wavy, fluffy, abundant and appears as soft, lustrous and beautiful as a young girl's after a "Danderine hair cleanse." Just try this-moisten a cloth with a little Danderine and carefully draw it through your hair, taking one small strand at a time. This will cleanse the hair of dust, dirt and excessive oil and in just a few moments you have doubled the beauty of your hair.

Besides beautifying the hair at once, Danderine dissolves every particle of dandruff; cleanses, purifies and invigorates the scalp, forever stopping itching and falling hair.

But what will please you most will be after a few weeks' use when you will actually see new hair-fine and downy at first-yes-but really new hair-growing all over the scalp. If you care for pretty, soft hair and lots of it, surely get a 25 cent bottle of Knowlton's Danderine from any store and just try it. Adv.

Carbines for Cavalry.

A proposition to convert the new Springfield rifle into a carbine for the use of the mounted service is being considered by the ordnance officers of the army. The plan is to shorten the barrel of the rifle four inches, and by so doing to reduce its weight by two pounds, thus making it much easier to handle by the mounted troops. The sights also are to be adjusted to meet the shortening of the barrel.

The decrease in the muzzle velocity, it is claimed, will not be so great as to interfere with its effectiveness up to a range to 1,500 yards. The ordnance department had been asked to make a report on the proposition. and the cavalry board will take it up and include it in its report on the reorganization of the cavalry and on the new equipment.

MRS. RIVERS DISCLOSES SECRET

Matter Didn't Prove Experiment After All, and She Now Makes It Public.

Mineral Springs, Ark.—In a letter from this place, Mrs. J. M. Rivers says: "If it had not been for Cardui, the woman's topic, no doubt I would have been in my grave.
I was sick all of the time for 10

years, and took medicines constantly. I suffered terribly. At last, I decided I would just try Cardui on my own book, and kept it a secret. It was certainly a God-send to me. Since taking it, I have no pain whatever, feeling good, and can wrestle with my layear-old son. In fact, I don't feel over 16 myself. Am as happy as a lark. When I began taking Cardui I only weighed 101 lbs. Now I weigh 117% lbs., and d, and can wrestle with my 16-yearam going to continue taking Cardui until I weigh 135.

I just can't say enough for Cardui, and I believe if all women who suffer from womanly troubles would take it, there would be more happy homes.

Using Cardui is no experiment. It has stood the most severe of all teststhe test of time. Cardul has been hause for over half a century, and in this time has benefited more than a million women. It is composed of purely vege-table ingredients, which have been found to build up the vitality, tone up the nerves, and strengthen the womanly constitution.

That it has helped others is the best

of proof that it will help you. Try

GIRLS! GIRLS! TRY IT, DIVERSIFICATION ON SOUTHERN FARMS

Some Reasons for Getting Away From One-Crop Idea.

VITAL PROBLEM FOR FARMER

Must Inaugurate a Safe and Sane System of Farming to Enrich, Instead of Wearing Out Our Lands— Cotton Exhausts Humus.

(By G. H. ALFORD.) There are two problems before us for solution. However, the most real and vital problem before us just at this time is to get our farmers to practice a safe and sane system of farming; one that will include crops to enrich instead of wear out our lands; one that will include plenty of good live stock to consume the surplus products and the leguminous crops that must be grown to enrich the land and to make manure to still further enrich the land-a system of farming that will grow the necessary corn, oats, wheat, rice, sugar cane, vegetables, fruits of all kinds, poultry, hogs, mules, horses, cattle, sheep and other live stock for home use and to sell at a price the people in our towns and cit-

ies can afford to pay. The too exclusive culture of cotton has exhausted the humus, the lifegiving principle in our soils; the washing of the clean cotton fields has gone on to such an extent that millions of acres of the best land in the cotton belt have been ruined. The too exclusive culture of cotton makes it necessary to send the money obtained for cotton north to pay for corn, oats, pork products, mules, horses and other farm products. The too exclusive culture of cotton has caused overproduction, thereby forced the price far below an equitable one, so that there has been but little more than a bare living for cotton farmers. The too exclusive culture of cotton established the credit system. As long as our farmers raise their supplies at home there is no necessity for the credit system. The too exclusive culture of cotton compels us to buy on credit and dump all of our cotton on the market in the fall in order to satisfy our creditors and thereby force the price

If these statements be true, why have the farmers in the cotton belt not practiced diversification more generally long ago? Many say that the farmers have been compelled to plant cotton to get credit, and at the low prices of cotton, which so long prevailed, were unable to get out of debt and go forward unhampered on an independent basis. This is no doubt true of many thousands of farmers.

There are, of course, numerous reasons for the too exclusive culture of cotton, but the argument used by most cotton farmers is that cotton is the most profitable crop to grow and that the larger the area in cotton the larger the profits. These cotton farmers usually show by figures that an acre of land that will grow 40 bushels of corn will grow one bale of cotton and that the cotton will sell for more money than the corn.

Now, come, let us reason together for a few moments. The success of any system of farming cannot bejudged by the crops or the next earnings for one year or for five years. Any system of farming that impoverishes the land is a miserable failure no matter what the profits may be for one year or for five years. Our problems largely depend upon maintaining soil fertility, and for this reason any system of farming that causes a de cline in the fertility of the soil is a shame and disgrace to our farmers.

Our greatest asset is the fertility of our soil. Just in proportion in which our soils are worn out, in that proportion is our prosperity diminished. No living man has ever acquired the art of growing good crops of grain, grasses, cotton or vegetables on poor land. Poor soil always means small yields; small yields always means poor people, and poor people always means the credit system, very little education, uncomfortable homes, poorly equipped farms, and, in fact, all that retards civilization.

In passing, permit me to suggest that corn with peas in the corn and peas grazed by hogs, and oats followed by soy beans or lespedeza will take the place of a large part of the cotton, and that you will make as large net profits from the sale of these crops as you make from cotton. Land that will make one-half to three-fourths bale of cotton per acre, on the average, one year with another, will make 30 bushels of oats and 20 bushels of soy beans, or two tons of lespedeza hay. The oats and soy beans or lespedeza hay will sell for more cash than the cotton. And wherein these crops and corn and oats used in a rotation surpass any one crop system, lies in the fact that the fertility of the soil is increased while with the too exclusive culture of cotton the fertility rapidly decreases

The most destructive and energetic insect that the world has ever known is gradually covering the cotton belt. There is one hope and only one hope for the farmers, and that is the diversification of crops. The adoption of a sane and safe system of farming one that will grow grasses, leguminous crops, oats, corn, hogs, sheep, cattle, mules, horses and some cotton will solve the boll weevil problem.

cotton belt. It sweeps the earnings of toll from the masses into the coffers of the few. Some years ago the commissioner of agriculture of Georgia, after careful inquiry of several hundred, found that the average rates charged the farmers for extension of credit from April and May to October and November was 54 per cent. per annum over and above the cash price Wives and children were compelled to work in the heat and cold from January until December to pay the 54 per cent. credit profits. Diversification of crops will abolish the credit system.

We are sending millions of dollars to other sections of the country every year to pay for pork products, mules, horses and other farm products. Diversification of crops will keep this money at home, our banks will soon be full to overflowing and the rate of interest lowered to say 6 per cent. because of the abundance of money. Then we will have the necessary money to pay good teachers better salcomfortable homes and good roads and properly equip our farms.

Diversification is the only remedy for low-priced cotton. There is no sane man who does not know that we will get more money for 12,000,000 than we will for 15,000,000 bales. The history of the past 20 years is proof positive of this statement. We all know that large crops of cotton mean a low price and that a low price for cotton means poverty and wretchedness all over the cotton belt. This being true, why will our farmers and their wives and children toll in the heat and cold in large cotton fields to grow large crops of cheap cotton to pay for high-price corn, oats, bacon, lard, mules and other farm products with the profits of several middle men,

supply merchants and railroads added? The growing of every farm product necessary for home use will curtail the production of cotton, raise the price to at least 12 cents per pound and enable us to use the money obtained for cotton to build good roads, magnificent homes, churches and school houses and fill our banks to overflowing. Life on the farm will then be free, unfettered by the bands of promissory obligations and our position in independence which the farmer alone can enjoy in the fullest significance of the term.

Every farmer should raise his own farm-work stock. It is true that millions are sent out of the cotton belt each year for mules and horses, but this is not the main reason why your attention is called to this subject at this time. Probably one of the two chief causes of poverty in the cotton mule and a turning plow is a guarantee of shallow soil devoid of vegetable matter. A shallow soil devoid of vegpoor farmers.

Farmers who buy their work stock about one-fourth the horse power money as farmers in some other sections of the country.

plow teams never raise sufficient farm buy feed stuff and this is the main reason why we have about one-fourth as many horses and mules as farmers in other sections of the country.

We can save the millions of dollars paid out for mules and horses each year and bring in millions from the sale of mules and horses, but a greatthis way sufficient work stock for economical crop production.

ERADICATION OF QUACK GRASS

Badly Infested Field Should Be Plowed From Five to Eight Inches Soon as Crop Is Removed.

(By ANDREW ROSS, Minnesota Experi

Where a field is badly infested with quack grass it should be plowed from five to eight inches deep as soon as the hay or grain crop is removed. All portions of the grass must be turned under. Within a few days the plow should be followed by a disk harrow with the disks set straight at the first time over to avoid turning any of the sod. The disking should be repeated once or twice a week for six or eight weeks and occasionally after that until freezing weather.

Short crop rotations are useful in keeping quack grass under control and when arranged so as to provide an opportunity to attack the quack grass at the right time they will permit eradication of the weed without losing the use of the land.

Good Plan. In the long run it is always a good plan to give a cow a dose of some axative at the first symptom of ud-The credit system is the curse of the der trouble.

"Pape's Diapepsin" cures sick, sour stomachs in five minutes -Time It!

"Really does" put bad stomachs in order-"really does" overcome indigestion, dyspepsia, gas, heartburn and sourness in five minutes-that-just that—makes Pape's Diapepsin the largest selling stomach regulator in the world. If what you eat ferments into stubborn lumps, you belch gas and eructate sour, undigested food and acid; head is dizzy and aches; breath foul; tongue coated; your insides filled with bile and indigestible waste, remember the moment "Pape's Diapepsin" comes in contact with the stomach aries to teach longer terms, to build all such distress vanishes. It's truly astonishing-almost marvelous, and the joy is its harmlessness.

A large fifty-cent case of Pape's Diapepsin will give you a hundred dollars' worth of satisfaction.

It's worth its weight in gold to men and women who can't get their stom-achs regulated. It belongs in your home-should always be kept handy in case of a sick, sour, upset stomach during the day or at night. It's the quickest, surest and most harmless stomach doctor in the world.-Adv.

Boys Prefer the Farm. The farm boy has a tremendous advantage in the world. Early he is trained to self-reliance, to performance of duties, to regular labor. He has a sound body. He is eminently fitted to do the greatest things done in the world. He recognizes that the farm is the best place in the world in which to live. Ten chances to one he would prefer to stay on his father's farm. If the father can learn to make the farm pay well, if he can make it progressive, with hope of fine achievement at the end of the struggle, then most boys will stay. It is when the farm is stagnant, unprogressive, dead, almost hopeless, that the young man the world made conspicuous by that sets his face resolutely away from the farm.-Breeder's Gazette.

LOSING APPETITE FOR NUTS

Writer Bemoans the Passing of the Ancient Fondness That Made Winter Evenings a Joy.

The old butternut, a very rich and fragrant nut of the olden time, has almost disappeared. Very few people of the present generation have ever tasted a butternut. The black walnut is becoming fewer, and in a generation hence it will hardly be known. And yet it is a precious nut, full of goodness and rare taste. Those old pans of cracked walnuts, in the long winter evenings, made up a family joy that has never been surpassed. The hickory nuts, especially the good old shellbarks, figured prominently in those nutty days, and the chestnuts, too, including the hazel nuts and beech nuts; but they are all growing scarcer and have sadly strayed away from the human heart.

The pecan is becoming the great American nut. There are thousands of trees cultivated in the south, and the nut has become commercially important. Trees are reported bearing \$200 to \$500 worth of nuts per acre. It is a rich nut, but quite too hard for the novice to pick out the kernels. There are, however, machines that do the work perfectly. But, after all, for rich, well-flavored and grand mouthfuls of nut, give us the English walnut.-Ohio State Journal.
