HOUSEHOLD INSECTS EASY TO CONTROL

Sodium fluoride is recommended as an insecticide to rid a house of cockroaches.

Dust the fluoride on places where the roaches run, said Dr. B. B. Fulton, research entomologist at State College. When they lick the dust off their feet, it poisons them.

Since young roaches are likely to hatch from eggs already laid, he continued, the dusting should be repeated every few weeks until they disappear.

If the roaches continue to infest a house, it is evident that they come from some source where at least some of the roaches are not reached by the dust.

Clothes moths cannot live in a high temperature. If fabrics are spread outdoors on a warm, sunny day, Dr. Fulton continued, they will soon develop a temperature fatal to the moths and eggs.

Saturating clothes with dry cleaning fluid and then putting them out in the sunshine to dry is recommended in cool weather. After they have dried, they may be stored by tying them up in paper or muslin bags.

The simplest treatment for moth infested furniture is to take it out of the house on a warm, sunny day and drench the fabric with dry cleaning fluid. Allow the furniture to remain in the sun until dried.

Sodium fluoride, mixed with eight parts of wheat flour to one part of fluoride, is an effective control for silverfish, Dr. Fulton added. Place the bait in the attic, basement, closets, on shelves, behind books, the space under the bathtub, and any other place where the insects may be.

Since 55 percent of a hen's body weight and over 65 percent of an egg is water, laying hens need a constant supply of fresh, clean water.
