Promotion Council—
(Continued from page one)

with the equipment costing in the neighborhood of between \$50-60,000. D. M. Robinson told the group of the investigating committee's visit to a plant and spoke optimistically about our chances of securing such a plant.

Knox Brigman, poultry producer, also spoke briefly about the advantages of such a plant and encouraged the council to take further steps along this line. He also said that Madison County had many advantages over Georgia, where plants of this type are already in operation.

The committee was given authority by the council to further negotiate with interested parties and at the same time prepare a question-answer discussion and call a special meeting of the council when this is completed.

The Brochure Committee also reported progress and it is hoped that the brochures for Madison County will soon be ready for the printer.

34 members and guests were present for the council dinner-meeting.

A nominating committee to name permanent officers for the council was appointed and will report the slate of officers at the next called meeting. Members of the nominating committee are Dr. H. E. Bolinger, of Marshall, chairman; D. M. Robinson, of Mars Hill, and P. M. Feldtmose, of Hot Springs.

FOR SALE — 35 acre farm, good buildings, 1.12 tobacco allotment. 1955 farm income, \$2,500. Entire farm can be irrigated from Chuckey River and tractor farm. \$6,000 without this crop. Five miles from Greenville, near Sunnyside store on Jones Bridge Road. H. B. CARTER, Route 10, Greenville, Tenn.

New Leaflet—
(Continued from Page One)

county for marketing home products — most important, WHERE they will be needed. You must be ready to haul your products to these markets. You will need to know county plans for gasoline priorities, and have a good knowledge of the highway system in your area."

4. Be Ready To Take In Evacuees — "You, your family and your neighbors should make plans now to shelter and feed evacuees if it becomes necessary. The Federal Civil Defense law provides that you will be paid for anything that is properly requisitioned."

5. Plan To Help Others — "Rural families may be asked to help the people in attacked areas." Your help will be most effective if you are trained to work on civil defense units such as rescue teams, first aid teams, wardens and auxiliary police. "If you are not in civil defense, ask your local or county civil defense agency how you may join a training class. If there is none in your area, help to get one started."

"The principles of civil defense are not new to rural people," the pamphlet emphasizes. "You have been taking care of your own, helping your neighbors, and ready to help others — in peacetime emergencies — for a long time. But the problems and dangers posed by possible enemy attack can be met and answered only by organization. Civil Defense is that organization."

In addition to the distribution being made by FCDA, copies of the leaflet are available at five cents each from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

CONSTRUCTION
OF PONDS IN
MADISON COUNTY

During recent years, pond building on a large scale has been underway in the Southern states, especially North Carolina. This has been largely due to the unusually dry growing seasons the farmers have witnessed. An artificial pond is a public health responsibility because if it is not properly located, designed, constructed and maintained, it can become a breeding place for a large number of mosquitoes. These insects transmit several human diseases, including malaria and yellow fever. With these facts in mind, the North Carolina State Health Department has passed the following regulation governing artificial ponds: "Any person proposing to impound water, raise the level of impounded water, or re-impound water in areas which have drained for more than three months, shall, prior to the institution of any construction or re-impounding activities make written application to the State Board of Health in Raleigh, North Carolina. These regulations are to be enacted by the local health departments in the different counties of North Carolina, and applies to all ponds constructed since 1947."

If you have a pond on your property, covering over one quarter acre of ground or more, please notify the local health department and let them help you in obtaining a permit to operate or construct an artificial pond. Like other health department service, this is available to you without cost.

PROPER LAND
USE STRESSED

(Madison Soil Conservation District)

Are you using each piece of your land in a manner that will protect and improve it, while at the same time producing the necessary crops to meet your needs? This brings you face to face with "How can I know the best use for my land that will fit my farming operation?"

The experience you have had in the past will help very much. You probably already know quite a bit about the nature of the different fields on your farm, such as sandy, rocky and wet spots. You may have washed away or is very thin.

An experienced soil conservation surveyor can be a big help to you in finding the best use for each piece of land. With your knowledge of the farm and the soil surveyor's knowledge of soils, you can have a complete and accurate physical inventory of your land. The surveyor will put this information on a map of your farm and you can use it in planning your cropping system.

Remember, the use you make of your land must be based on the way that nature made it if the land is to keep working for you permanently and profitably. The best use is usually the most profitable use in the long run.

Singing School At
Little Ivy Church

There will be a singing school held at the Little Ivy Baptist Church starting May 28, 1956. Everyone is welcome.
JOHN HUNTLEY,
Mars Hill, N. C.

Training Program—
(Continued from Page One)

Last year some 1400 farms exceeded their acreage allotment and chose to dispose of their excess which resulted in the tremendous task of trying to accommodate the excess producers and complete the original measurements of the other farms all at the same time with a limited number of employees. This new policy will assure the completion of original measurements on all farms prior to any remeasurements or disposition of excess acreages.

Producers can readily see that it will be to their interest to plant within their acreage quota this year due to this policy and to the 44c per pound tax on 1956 excess tobacco.

The marketing quota law or regulations sets forth specific responsibilities and duties for which farm operators with allotment crops are responsible. They state that the farm operator or his representative who is familiar with the farm will be responsible for assisting the reporter, at the time the farm is visited, in making necessary measurements and for showing him the farm boundaries and all areas on the farm planted to crops subject to acreage allotments and marketing quotas and other acreages for which measurements or estimates are required.

In conclusion it was pointed out that present plans are being developed to secure a more accurate and timely performance job this year and that all tobacco farmers could be of great assistance by letting the reporter of their community know when planting was complete and cooperating with the reporter when he first visits the farm.
