## 1961 MARKETING QUOTA ON WHEAT CROP APPROVED

Preliminary returns from a referendum held Thursday, July 21, in the 39-State Commercial wheat-producing area for 1961 show that 57.3 percent of the farmers voting favored marketing quotas on 1961-crop wheat, the U. S. Department of Agriculture announced today.

Preliminary returns show a total vote of 170,997. Of these, 148,766 (87.3 percent) favored marketing quotas on 1961-crop wheat and 22,231 (12.7 percent) were opposed. Last year 80.8 percent of the farmers voting in a referendum favored marketing quotas for the 1960 wheat crop.

Because proclaimed wheat marketing quotas are effective on approval by two-thirds or more of the farmers voting in a referendum, marketing quotas will be in effect for the 1961-crop wheat as a result of the referendum under current controlling legislation.

Producers in the 39-state commercial area who stay within their average allotments will be eligible for price support on 1961-crop wheat at not less than a national average price of \$1.78 per bushel. In the 11-state non-commercial area, county support rates, as provided by law when allotments are in effect in the commercial states, will be 75 percent of what the rates would have been if the non-commercial counties were in the commercial area.

The preliminary results show that North Carolina voted 97 percent in favor of marketing quotas for 1961.

Atrazine 80 W, a commercial material for control of annual weeds and grass in corn, has been used on one acre of corn grown by Boyd Hill, of the Middle Fork community, with excellent results.

This field of corn is being grown just off the hard surface road between Beech Glen and Highway 19 and is marked by a sign. The acre of corn being treated with Atrazine 80 W, has received no cultivation and near

in many sections. It is that next year many more and girls will keep good records and give good demonstrations so they too may take a greater part in 4-H Club Week.
