

Ehringhaus Gives Points On Economy

Special to The Mountaineer

"I am convinced that what the people of North Carolina want this year is to be assured that State government for the next four years is going to be economical, honest and efficient," said J. C. B. Ehringhaus, candidate for Governor, in a recent public statement, adding: "If I couldn't contribute to that sort of government, I would not aspire to the office of Governor."

"Economy in government is no longer a mere virtue, but it is now a necessity. I want the people of North Carolina to know that if I am elected Governor, I will consider that I have received a mandate from them to devote my energies first to the accomplishment of strict but sane economy. If one man can be found who can do the work now being done two and for the cost now being paid to two, you may rest assured that I shall try to find that man."

"The taxpayers who pay public officers have a right to expect and demand that they give all of their time, energies and their thought to the performance of their official duties, and to practice that vigilance which reasonable and careful business men are compelled to practice in their private affairs. No public officer should expect to give less, and no taxpayer will be content with less."

The popularity of lespedeza as a soil improving legume has spread to Polk County where 45 farmers ordered co-operatively 4,027 pounds of common, Kobe and Korean seed this spring for planting on small grain and pasture.

Fifty new brick brooders have been built by Stanly County poultry growers in recent weeks.

A YOUNG MAN'S FANCY

New Low Priced Electric Refrigerators On Display At Massie's Furniture Co.

"There have been only three million electric refrigerators sold to the American public to date, due to the high price which have prevailed for quality goods. As in radio in 1928, Majestic now brings dependably electric refrigeration within the reach of this great lower income group," said Guy Massie, local furniture and Majestic dealer, in speaking of the new low priced Majestic refrigerator.

"In designing this new series of Majestic refrigerators, quality was not lost sight of for an instant. Rather, it was their aim to evolve a new mechanism, sturdy and dependable in every respect, but one which could be manufactured at lower cost. Also, the engineers were asked to create advances in the design of the cabinets by which full advantage could be taken of the marvelous fine-production systems of our modern fifteen acre factories. Their efforts of the past twelve months have met with

complete success, thus making one of the outstanding achievements of recent years. Heading the list of features characterizing this new production, "Eli-sto," a new tough, non-fading finish; surprising operation equivalent to the consumption of a sixty watt and a quietness comparable to a vacuum cleaner at triple the price.

Further discussion with Majestic brought out additional angles. "Our picture of refrigerators," says Mr. Massie, "that they are, in the field, what good sixes and eights are to the automobile man. Our Majestic hermetically sealed and sixteen cylinder units may be likened to the Mercedes and Buick of the refrigeration world. The cabinets, the differentials, the deluxe line has luxury and are desirable, but not to compete satisfactory with the best."

The blue mold disease beetle insects are causing damage to tobacco plant beds in eastern North Carolina.

Heavy Milk Output By Holstein Cow

In the North Carolina State College dairy herd there is a Holstein cow which produced enough milk during the month of March to supply a family of five persons with all the milk they would need for ten months. This cow was the high producing dairy animal in the State for that month.

The animal, Rosni Homestead Buckeye, produced 302 gallons or 2,602.5 pounds of milk in March from which 107 pounds of butter could have been made from the fat. However, the milk was used in the college dining hall and consumed by students. The value of the milk was \$99.85.

Prof. R.H. Ruffner, head of the animal industry department, says the cow consumed 682 pounds of a grain mixture, 372 pounds of alfalfa hay, 186 pounds of corn silage and 310 pounds of beet pulp during the month. The cost of the feed was \$16.17. Sam Rich, a senior student at the college, feeds and milks the cow. Mr. Ruffner says if every cow in North Carolina were to receive the same treatment that this animal gets from young Rich and had the capabilities of the animal in producing milk, North Carolina would shortly become one of the leading dairy states of the Nation.

Not only did Rosni produce enough milk to supply a family of five for ten months, but had the cream in the milk been made into butter it would have supplied the family for one year with some over for a sixth person. This would have been in addition to the buttermilk and skim milk available for food and feed. If the milk had been made into cheese, it would supply a family of four for three years.

Rich mixes up his grain ration by mixing together 450 pounds of ground corn, 100 pounds of peanut meal, 100 pounds of cottonseed meal, 50 pounds of ground cottonseed, 200 pounds of wheat bran, 100 pounds of oats, 100 pounds of beet pulp, 22 pounds of limestone and 11 pounds of salt.

Poor Apple Crop Forecast For Season

Late freezing weather this spring and heavy crops produced for two years under unfavorable seasonal conditions has brought about a situation in the apple orchards of North Carolina that causes a poor crop to be forecast for this fall.

H. R. Niswonger, extension horticulturist at State College, predicts a 25 per cent crop. He has recently been working with the apple growers in the Brushy Mountain section and in the Henderson County area. One of the most productive orchards in Wilkes County, which has not missed a crop in 17 years has only a few scattering fruit buds. The Limbertwig variety is one of the most popular apples in the section and always blooms heavily. Yet many Limbertwig trees are showing not a single blossom this season. Mr. Niswonger attributes the heavy yields for two years coupled with the unfavorable growing conditions as the reason for this condition. The trees are weakened, he says.

In Henderson County, however, the extremely cold weather of late spring following the warm February seems to have caused the damage. There is also a shortage of blossom buds due to some conditions as exist in the Brushy Mountain area. However, the cold weather caused heavy damage to the

Summer Range House New Poultry Idea

A summer range house costing only \$10 to \$15 to build and easily constructed at home may be used from April 1 to November 1 in cutting the cost of rearing the new crop of poultry.

"Poultrymen of North Carolina are beginning a definite trend towards the use of battery brooders in a large permanent brooder house," says C. F. Parrish, poultry extension specialist at State College. "This trend is due to more knowledge about disease control and factors influencing chick mortality. With this lowered mortality among young birds, the battery brooders quickly become overcrowded and so the summer range house fills a very definite need. The chicks may be placed in the house at the time they are fully feathered and do not need heat until the pullets are placed in the laying houses."

Mr. Parrish says his office has plans for building the range house which he will be glad to send to anyone interested. The house is light, making it easy to move to new range. Two men can carry it about. The house also offers protection from storms and rain; affords plenty of fresh air and shade during the hot months of summer and prevents large numbers of growing stock from ranging together. Each house will accommodate about 125 pullets until they are placed in the laying houses.

Such a house also helps to eliminate disease, Mr. Parrish says. The birds are protected from the droppings by wire screen and the easy shift to new range keeps them from being contaminated by ground infested with worms and other poultry parasites.

Mr. Parrish has used these range

BILIOUS

"I have used Black-Draught . . . and have not found anything that could take its place. I take Black-Draught for biliousness. When I get bilious, I have a nervous headache and a nervous, trembling feeling that unites me for my work. After I take a few doses of Black-Draught, I get all right. When I begin to get bilious, I feel tired and run-down, and then the headache and trembling. But Black-Draught relieves all this."—J. C. Hendrix, Homerville, Ga.
