## THURSDAY, AUGUST 11, 1932

Chairman Jeffress, of the state highway commission, has announced that men and mules will be used in carrying out the road construction program which was made possible by the Federal relief fund. Evidently he has decided that road machinery can be kept idle and not get hungry while men and mules will have to be fed whether worked or not. A good deed for humanity, to say the least

## TAXES ON THE INSTALLMENT PLAN

The suggestion was made recently that taxes be paid on the installment plan person making the suggestion pointed out that it would be much easier for the taxpayer to pay a few dollars taxes along with their light and water bill every month than it would be to dig up thirty of forty dollars at the end of the

There are several ways of looking at this question, and a good argument for both sides. but in the long run what the town and county wants is the taxes paid in full, and if the taxpayers can pay them more promptly on the installment plan then why not adopt this method? Business institutions have changed their business methods during the past few years from credit to the installment plan and few have found that they could have survived but for

## A STUDENT AT THE AGE OF 85

R. A. Sentelle, 85, and one of the county's best known citizens has always stood for better educational facilities in this county, having served as director of the school system for over 30 years. Mr. Sentelle is now, even at the age of 85, setting an example for the coming generation regarding education. He is still going to school, trying to learn something new, although for almost 70 years has been in constant touch with the higher seats of learning. Br. Sentelle takes the position, evidently, from his becoming a student again, that no matter how long a man lives and learns, there is always something more to learn that is worth while.

What a fine thing it would be if we only had citizens at the age of 15 instead of 85 that could look upon the value of education with the same light as Mr. Sentelle.

## COUNTY HEALTH OFFICER AN ASSET

One of the hardest things to do these days is to convince a man that he is getting more for his money than he is paying for, especially if he has to pay for anything in the form of taxes. To this statement we might add that Haywood County is indeed fortunate to be able to say that we have a full time health officer employed in the county.

This one office has caused some criticism by several taxpayers that have not been informed as to the true value of such an officer in our midst. The future of any community depends largely upon the health of the citizens at present, and it is important that we not only think about our present living conditions but also those of the generations to follow.

Not only has the health officer showed and taught us how to keep our homes and premises free from diseases, but he has made it possible for the dairies of this county to sell milk under an official grade test in competition to dairies outside the county that previously sold hundreds of dollars worth of milk here every

The state law requires all public eating places to sell only grade "A" milk, and unless a heath officer can place his official seal on the certificate the milk cannot be legally sold to the public.

Some have gone so far as to blame the dairies of the county for employing this officer, but as a matter of fact, having a health officer in the county means much more work for the dairyman, because he has to keep everything spotless, and in a sanitary condition, whereas if no one ever took the trouble to inspect his dairy and barns, he could get by with less work.

It is only right that the consumer know just what he is buying when he pays his milk bill. He should know whether the milk is the best grade produced, the medium grade, or whether he is using milk contaminated with disease germs that would injure the health of his

family After all, if the health officer did no more than keep Haywood products at home, it would be a good investment, but he does more than that. Many things that the public never heard of are quickly cleared away by the health officer that perhaps if it were not for him some dreadful disease would soon spread over the county and the result be deplorable.

## HIGHWAY NO 284

Interest has been aroused here again as to the possibilities of getting Highway No. 284. the route over which thousands of tourists from South Carolina and Georgia come to Waynesville via Brevard and Pisgah National Forest. since the state has received an appropriation of over a million dollars from the Federal Government for building roads.

Officials of the local Chamber of Commerce and Brevard have been working untiringly on the project. Although they have no definite assurance to date as to the actual paving of the road, they have been somewhat encouraged over the appropriation, and it seems that the task at hand now is to persuade the Highway Com-mission that No. 284 is worthy of sharing in the Federal funds.

We understood that Congress passed the relief bill only because they felt that such an expenditure of money would nelp relieve the unemployment situation, and at the same time complete proposed public projects that have been temporarily suspended because of the economic situation, and according to The Brevard News in an editorial last week, now is the time to begin this work here in Haywood and Transylvania counties.

Of course, the paving of No. 284 at this time would employ many Haywood men, but the outside money it would bring into the county from tourists that would travel that highway that are now going other routes would amount to far more than the men would ge: for their labor on the highway, and the work would be more than acceptable.

Right now is the time to go after this highway if we really want it. The state has the money to bulli it for is if we want it bad enough to go after it and persuade them that we are worthy of the road.

The Brevard News expresses the following opinion on the matter:

Officers of the Brevard Chamber of Commerce and members of the Board of Courty Commissioners are to be commended for their efforts in behalf of this county just now. These agencies are working hard to get Chairman Jeffress of the State Highway Commission to see the necessity of widening and surfacing Highway 284 from the Pisgah National Forest to the Waynesville side. This work is essential not only to complete the network of highways. but for the more immediate need of giving the citizens of this section some work to do. The United States government is sending into this state some six millions of dollars for road work, being actuated almost entirely with the purpose of relieving unemployment.

"If there is a section in the State of North Carolina where road work is needed for the purpose of providing employment, that section is to be found right here in Transylvania county. Three weeks more, and the summer camps will close, the tourists will leave for their homes, and then what activity we have in the com-munity will come to an end, except the regular industrial plants and these have all they can do, and more, to take care of their own people.

'It is agreed that business conditions are showing signs of improvement in many sections; stocks are rising on the stock market, industrial centers are adding workers to their renewed activities, yet all of this means absolutely nothing to this immediate community except the gratitude that others are finding the way a little better than heretofore.

"Just what this community will do when the summer season ends and the campers and tourists go home is more than anyone can tell. We believe that Chairman Jeffress, when the true facts are unfolded to him, will respond to the appeal of the Chamber of Commerce and the county commissioners, and make his first orders embrace the work on Highway 284. Next Spring will be too late for this work, if the community is to profit by the act of Congress in providing these funds for road work. NOW is the best time that this new money could be spent in this community.

"Each and every interested citizen, the ministers, business men, farmers and workers, ought to write Chairman Jeffress, of the State Highway Commission, and set forth the need of the hour. We believe he will respond quickly when once impressed with the seriousness of the situation.

Of dourse this need applies only to the wage-earners. The farmers of the county have their food in abundance, while a large number of them have farm products for sale. It is that group of our citizens who must work for wages that is feeling the need of the opportunity to work. And their need is great, more so than many people herebouts realize."

### PRIVATE FISHPONDS WOULD BE PROFI-TABLE

A suggestion that might be worth while to citizens living in the rural sections of the county is the construction of fishponds on their property. Almost every farm has a stream running through it which could be easily converted into a fishpond at practically no expense

The dams can be built at a low cost, the game fish from public hatcheries can be had to stock the waters, and in three or four years the pond would be alive with fish. Not only would this provide plenty of fresh fish for the owners use, but it would enhance the value of the property if it were ever placed on the market. Then too, fishponds would add to the beauty of any country estate. The United States government will be glad to supply data relating to construction of fishponds, care of the small fish and other problems,

The ponds would take up but little space on the farm and more food can be raised in a half acre of water than on two acres of land, according to information given out by an authority. After all, it seems that farmers would get somewhere by building a few fishponds on their property.

## Park Development Meeting

Carolina counties, representing a operation and a large amount of hard number of towns from Hendersonville work. That will enable this section west to Franklin, were in Asneville Finday to astend a meeting called to emote development of the Smoky Mountains National Park and highvays leading into the Park. Statements have been in circulation in North Carolina to the effect that the more active in building roads to the ark and in perfecting plans for develoment on that side of the mountains than the people over here have been. No doubt this is true. North Caro-linians who have been across the mountains in the past few weeks have been greatly impressed with some of he work done by the Tennesseeans. and it is said that by far the greater number of people now visiting the Park area are entering from the Tenlessee side.

Tennessee has been working more systematically and tirelessly for Park development than North Carolina. Over here it is believed that the Tennesseeans have greatly outdistanced our people in this matter. The ob-ject of the meeting in Asheville is to get the people of Western North Carolina behind a well-defined program for Park development on this side of the area.

After much discussion the Asheville meeting settled on a policy which if sincerely and energetically backed up by the people of the mountain counties directly interested in Park development, will result in securing for this section the benefits which it should receive from the park.

In the past the trouble in Western North Carolina has been nothing moror less than jealousy among a number of towns, all of which were seeking to derive the greatest possible bene fits from the development of the park, This feeling was at the bottom of the controversy over designation of a park entrance," or several entrance. and proposals for constructing around a dozen roads to connect with the park area. This feeling has been so strong that there has not been any

genuine co-operation among North Carolina towns or any organized or systematic effort to promote North Carolina's interest.

The outlook since the Asheville meeting that development of the park should be greatly improved. Leaders in all Wostern North Carolina communities are at last ceing the futility of the policy heretofore pursued. For the past two or three years very little has been accomplished; and this policy offers nothing for the future.

It was rut at the Asheville meeting area is under control of the federal authorities. The authorities will determin what developments shall be made and where roads are to be constructed. North Carolina might build roads up to the park boundary line at certain points only to find in later years that they made no connection with roads in the Park. Therefore the conclusion of the meeting was that a committee composed of one representative from each of the interested counties, should be created and this committee should confer with park authorities from time to time and the authorities and the committee should work together for park development on the North Carolina side of the area, When the park authorities have determined what developments shall be made in the area, this committee will undertake to secure the co-operation of the State Highway Commission in building roads leading to the boundary line and which will connect with roads constructed in the park. The committee will also endeavor to aid the park authorities by conferring in regard to routes and the developments. park authorities by conferring in regard to routes and the developments

gard to routes and the developments which ought to be made in the park.

This plan appears to be practical—in fact, the only business-like plan that has been seriously considered in any of the several marketime. any of the several meetings held for considering park problems. If the people of Western North Carolina will back this plan it will enable the section to get somewhere with the
