Big Fish And Big Stories

Eugene W. Gauder, native of North Carolina and former North Carolina teacher, but now biographer of the Department of Living and Extinct Fishes of the American Museum of Natural History, spent the new fishing season not only with a note of skepticism about the big ones that got away from him and Henry, but also with skepticism about the big ones that got away from him and Henry, but also with skepticism about the big ones that got away from him and Henry.

Some comparatively large fishes may be found in the lower water streams of this and other sections. Dr. Gauder explains that the big ones that got away from him and Henry, but also with skepticism about the big ones that got away from him and Henry.

A 12-foot, 14-inch long, 125-pound, captured in a stream near the town of Waynesville, was the second largest fish ever taken in the United States. It was a species of the genus *Salmo*, and was named *Salmo gauderi*.

North Carolina has a reputation for producing big fish, and it is not surprising that the second largest fish ever taken in the United States was captured in this state.

Dr. Gauder says that the big ones that got away from him and Henry, but also with skepticism about the big ones that got away from him and Henry.
