By GEE MCGEE

SUGGESTIONS FOR PEDESTRIANS

- 1—While crossing the street, keep your feet up and one down. If you have eyes you can't do this, better not try to cross it.
- 2—Don't carry any sharp or heavy articles in your pockets. Ballon tires are expensive and should not be punctured, but since the knee-action, if possible.
- 3—When you see 2 cars approaching you, don't jump straight up and you probably stand 1 chance in 1000 of landing on top of a radiator or on the radiator or hood. The best way is to clear up 2 cars.
- 4—If you see that there is no possibility of being run over, lie down on your back and let the wheels pass over your stomach. This will be safer on the driver and the passengers. You needn't get his number. He don't carry any insurance, and really doesn't own the car yet.
- 5—If you are in a hurry, never try to cross a street at all. Just go on back home and telephone the installment agents to call for your furniture, radio and range. You can't use these things after you are dead anyhow.
- 6—If you are crossing a street at a bad corner, hold our your left hand press your feet tightly against the pavement, keep your tongue in your mouth to prevent it from getting bit off when you are struck, and pray. Crossing one street a day is enough for a single (or married) pedestrian. Don't strain yourself.
- 7—If walking on a public highway, it is best to stay at least 15 feet on the righthand side of the road, es-

pecially if trucks and buses frequent the said highway, but be careful and don't get your clothing torn off by bushes, briars, and wire fences. Your family will expect you to come home at least partially dressed.

8—Don't curse auto drivers. They have the right of way all the time everywhere, day and night. If the green light is in your favor, be more particular than ever; nearly all smart-alec drivers see green only. It might be best for you to stay at home anyway, so you need not obey these instructions.

Doyle Alley Is Named President Of Young Demos.

(Continued from page 1)

That is require them to come here in their own ships, buy for cash and transport at their own risk this will go far to keep us out of any future war but make for peace throughout the world.

"There are those who think we would gain by a foreign war. This is the short-sighted view. What did we gain from the World War? One of the causes now prolonging the depression is the menace of war throughout Europe. America's course is the way of peace. We need our navy and army only as the means of national defense, and we never needed them more than now. But even as much as we need army and navy we need an international policy of the good neighbor—to use the President's words. To be sure this policy could not be expressed more effectively than in a policy firmly refraining from any effort to make merchandise of the weapons of war at the expense of other nations."

Clyde Hoey said in his speech at the banquet Saturday night that "under the providence of God the Democratic party has provided the nation with a great leader for just such a crisis. Popular government is justified by its fruits. Every great crisis serves to produce, or reveal a colossal figure, and it is the mission of the Democratic party to supply the nation with its leadership for the great crisis in war and in peace. It gave to humanity Woodrow Wilson for the world freedom; it has given to America Franklin D. Roosevelt in a supreme struggle for economic freedom."

"The Republicans' critically complain of experiments in government. We admit it. Experiments have marked the way of the world's progress. Luther Burbank experimented and produced more luscious fruit and gorgeous flowers and enriched plant life. Edison experimented and illuminated the cities, towns and villages of a nation and lifted the load of drudgery from the backs of the world's workers. The mechanical scientist experimented and conquered the air and made all the forces of nature subservient to the needs of humanity. George Washington and Thomas Jefferson and their collaborators experimented in the science of government and beheld the republic America the marvel of the nations of the world. Franklin D. Roosevelt is experimenting in scientific research in governmental functions and the republic is having a rebirth under the Constitution. There is no revolution, no repudiation, no renunciation, but a reeducation of national conscience and social responsibility grafted upon our governmental structure and a new and mightier destiny made possible for this nation."

Well, Ma sat there and instructed the kid in this manner: "Honey, please hold your nose when you jump off that plank. Don't get water in your eyes, Sugar Pie, some black—that's too deep. Are you cold Darling?"

And on she suggested: "Lookout, your bathing suit is about to come off. Sweetheart, please don't slide down that thing backwards. What in the world would happen to you if it had a nail or a splinter in it? It would rip you open from one end to the other. Oh Mercy! Look at Aggie; she's in water over her head!"

"What kind of place is this now?" Only 4 life-savers on duty. What in thearnation would keep the children from drowning if they were to all get strangled to death at the same time. Oh, me—Oh My; Baby, please swim towards mama. Precious listen; hold on to that inner tube." Luckily, none of our children got drowned.

Personally, I let "Ma" do the keeping up with my boys and girls. I was too busy taking in the sights. Some of the bathing suits were so abbreviated that I had to get a little closer once or twice to see if the girls were actually in the nude, but they weren't, doggone-it! Several of the best looking lassies actually went into the water. Women are funny animals; they won't wear a pair of stockings down town with a run in them, but they'll parade right in front of the public almost without embarrassment or anything else on.

Man Has Failed To Find Method Which Will Start Or Stop Rain

Many suggestions for stopping the severe drought of 1934 have come in to the United States Weather Bureau the last few weeks. Just as many are received for stopping floods in times of excessive rainfall. In fact, a single cause, for example, the wide use of radio, is often advanced for both drought and flood. No device yet developed by man is of any practical value in starting or stopping rain, according to Dr. W. J. Humphreys of the Weather Bureau.

Nature's method of making rain, Dr. Humphreys explains, is first to get an abundance of water into the atmosphere by evaporation from water surfaces, ice surfaces, growing vegetation and damp soil and then squeeze it out by lowering the temperature.

Ordinarily there is enough moisture in the air to provide at least a moderate rainfall whenever the machinery for its condensation into raindrops is working right. This machinery calls for the proper distribution and movement of air masses differing in temperature and density. In other words, when a normal movement of atmospheric "highs" and "lows" is interrupted and relatively stagnant atmospheric conditions is established and persists for a long time, drought develops notwithstanding the fact that there may be enough moisture in the air to produce rain.

Obviously, Dr. Humphreys points

out, radio, which neither hastens nor retards evaporation of the moisture in the air, cannot be a factor in promoting or hindering rainfall.

Electrical devices, sprinkling the clouds with dry ice, starting large fires, and setting off loud explosions, among the other rain-making schemes suggested, either do not work or cost too much for practical use.

All of the electrical schemes investigated by the Weather Bureau, Dr. Humphreys says, are utterly useless. Sending cooling substances up into the clouds to cause rain, he adds, is about a century old. Even liquid air has been tried. This plan, however, is wrong in principle and no rain has ever resulted from such practices.

The use of fire to produce rain was strongly advocated 80 or 90 years ago and this suggestion continues to bob up from time to time. This method, Dr. Humphreys says, is correct in principle, but the cost of a fire big enough would to break a drought would be prohibitive.
