

# COUNTY AGENTS' COLUMN

## FARM WORK SHEETS IN NORTH CAROLINA MUST BE FILED BY JUNE 18

"All farm work sheets showing information in the conservation phase of the 1938 Triple-A Farm Program in the East Central Region should be completed and submitted to the local county office not later than June 18, W. G. Finn, director of the East Central division, announced.

"Farmers who expect to take part in this phase of the 1938 program, who have not submitted information for their farms, should submit work sheets by this date in order that the records of the county office may be completed and the checking of performance started as soon as possible after June 18.

"Mr. Finn pointed out that the filing of a work sheet in no way obligates the owner or operator of the farm. It merely supplies information about the farm which serves as a basis for participation in the conservation program. However, the filing of a work sheet for each separate tract of land owned or operated by a producer is a necessary prerequisite to the filing of an application for

payment. "Mr. Finn also explained that all requests for changes in the land to be regarded as a farm in accordance with the definition of a farm under the 1938 program must be filed by June 18. 'Only those tracts of land operated as a unit may be included under a single application for payment,' he said, 'and in order for a tract of land to be considered as a unit, information must be filed by the above date showing that it is being operated as a unit.'

"In reviewing performance under previous Agricultural Conservation Programs in the East Central Region, Mr. Finn said: 'In 1935, 385,000 applications for payment were received, representing approximately 628,000 farmers. In 1937, more than 400,000 applications were filed. Approximately three-fourth of the 1937 payments have been made to date, and it is expected that the remaining payments will be made at an early date.'

To date there are approximately 2,400 work sheets on file in the county agent's office for Haywood county. Persons who filled out work sheets in 1936, 1937, or 1938 need not fill out a new one.

will be sufficient for each 10 hens. The best time to feed this mash is at 2:00 o'clock in the afternoon.

Question: When is the best time to apply poison bait to control tobacco bud worms?

Answer: The bait should be applied early in the morning when the bud is open. A small pinch of the bait should be dropped into the center of the bud. Careless applications are of no value. Applications should begin about two weeks after the plants are set, but many growers delay until serious damage is noted. Treatments should be continued every week or ten days until the plants are topped with the bait being placed directly in the tip of the plant.

When you hear a man bragging that he never changes his mind you don't have to wonder what kind of a mind he has.

## Summer-Time Is Salad-Time

Courtesy Sealtest Laboratory Kitchen

YOUR salad can be practically a "meal in itself," yet refreshing, light and nourishing. And, now is the season to give the family or guests salads at practically every luncheon, dinner or supper. Cottage cheese is such a perfect ally to vegetables, fruits, lettuce or greens. Here's a combination your guests will adore!

### LUNCHEON SALAD WITH COTTAGE CHEESE CRISPS

6 tomatoes 1 cup cottage cheese  
Lettuce or other greens Mayonnaise

Peel tomatoes and cut through the centers in fifths, leaving an uncut portion at the base so that the sections may be spread apart but will remain attached. Place tomatoes on lettuce arranged on a large platter and fill the centers with cottage cheese. Serve with mayonnaise

### or French dressing and Cheese Crisps made as follows:

1 cup flour 6 tablespoons butter  
1/4 teaspoon salt 1/2 cup cottage cheese  
1/2 teaspoon baking powder 1/2 cup milk  
1 teaspoon celery seed 1 tablespoon paprika

Mix and sift the flour, salt and baking powder and stir in the celery seed. Work in the butter with the fingertips or cut in with 2 knives. Combine the cottage cheese and milk and add to the first mixture, stirring in quickly. Turn out on floured board and roll out to 1/4 inch thickness. Cut with a floured knife into strips 1/2 inch wide and 4 inches long. Place on a baking sheet, brush with milk or cream and sprinkle with paprika. Bake in a hot oven (425° F.) for 10 to 12 minutes or until a delicate brown. This recipe will make 35 to 40 crisps.

## TIMELY Farm Questions and Answers

Question: Is it necessary to feed moist mash to my poultry flock throughout the year?

Answer: There is little to be gained through this feeding practice, but the mash has an important place in the feeding at some times during the year. It is especially important in keeping up production of laying hens during the period beginning about June 1 and continuing through October. It is also used to hasten production of late hatched pullets and with breeding hens to hasten production in January. Three pounds of the regular laying mash moistened hot water or milk, preferably milk,

## Teachers For The 1938-39 School Term Are Named

Jack Messer, superintendent of the board of education, has announced the teachers who have been elected to teach in the schools of the county, with the exception of Canton district, which operates under a separate unit. As yet there have been no placements.
