Success In Making Jelly Calls For Much Experience

Making clear, sparkling-bright, firm but quivering jelly is not just a matter of cooking fruit juice with sugar and trusting to luck, according to home demonstration specialists of the State College Extension Service.

Fine jelly is not so easy to make, as many housewives can testify after turning out a batch of gummy or syrupy stuff that refused to jell, or perhaps was tough, gummy, dull colored, and without flavor. "Lots of sad things can happen, as any jelly-maker know," said Miss Sallie Brooks, assistant extension nutritionist.

A wide, shallow, flat-bottomed kettle is best for cooking the sugar and fruit juice for making jelly. Such a kettle permits rapid evaporation and bring the mixture to the jelling point without the long cooking that spoils the color and flavor.

A cup of sugar for each cup of fruit is often used, but sometimes it is best to have a little more juice than sugar, depending upon the kind of juice used. Too much water or excessive fruit moisture will keep the product from attaining the equal quality desired for marketing or for home consumption.

The question of when to take the jelly from the stove is of great importance. Keep dipping a large spoon in the boiling syrup, lifting it up, and allowing the syrup to run off the side of the spoon. It is ready to take off the stove when it will not run off the spoon in a steady stream, but separates into two distinct lines of drops which tend to "sheet together."

Rains Wash Soluble Nitrogen From Soil

Protracted rains this season have brought farmers concrete evidence of the risk they run when depending entirely upon soluble, inorganic sources of nitrogen in fertilizing crops at planting time, said C. B. Williams, head of the agronomy department at State College.

The pale green and yellow crops, especially in Eastern North Carolina, are suffering from a lack of nitrogen, he explained. The soluble sources of this element are easily leached out of the soil in rainy weather.

Experiments, however, have shown that where the inorganic nitrogen, which is necessary, is supplemented with organic sources such as cottonseed meal, soybean meal, fish meal, dried blood, or tankage, crops are better protected against nitrogen deficiency in wet weather. Nitrogen from organic sources does not dissolve as rapidly and will stay in the soil a longer time than that from inorganic sources such as nitrate of soda and sulphate of ammonia.

Pale, sickly crops that appear to need nitrogen at this time will be helped by moderate applications of inorganic quickly soluble nitrogen given as soon as possible, Professor Williams pointed out. Side-applications of 40 to 50 pounds of nitrogenous material that can be taken up at

War Secretary Declares Piece

Harry Woodring and son

Although Harry Woodring is secretary of war, he is working toward a piece arrangement here, cutting the birthday cake which featured the party given for his four-year-old son, Marcus, and three-year-old daughter, Melissa, who were born a year apart

William McCracken Makes Outstanding Vocational Record

Among those who have outstanding home supervised practice programs in the department of vocational agriculture in the Waynesville high school is William McCracken. William has this year: 9 acres of corn, 5 acres oats, 9 acres soil improvement crops, 6 acres soybeans for feed, 1 acre tobacco, 4 hogs, 10 dairy cows, 96 acres of pasture and 1 acre of truck crops.

McCracken is 17 years old and has been enrolled in vocational agriculture through his four years in high school. He graduated this spring. Starting with one cow and a few acres of fees crops he has grown in the business of farming through his home supervised practice work.

William's work was such last year that he was declared the outstanding student in the state, in vocational agriculture. By reason of this he and his teacher were awarded a trip to the National convention of Future Farmers of America which was held in Kansas City, Missouri. He is not only an outstanding student in agriculture, but he has found time to enter all contests sponsored by the State Department of Education and open to pupils in vocational agriculture. McCracken was on the football team, the basketball team (chapter) he took part in plays, essay contests, chapter contests and many other outside interests. He is also a member of the chapter brass band and is secretary to the Smoky Mountains National Park chapter Future Farmers of America.

William plans to come back to school next term and take a business course, which he believes is essential to a good farmer. In the meantime he will operate his dairy and general farm with his father and hired help.

In 1935 William had the beginnings of a dairy herd but late in the year his herd, along with his father's and the dairy barn was burned. He lost all he had, but started from the beginning again to build his herd. The next year the dwelling house was destroyed by fire. In spite of these setbacks he has, through hard work and judicious planning, built his herd up and improved his general farm so that today he is on the road to a prosperous farmer and useful citizen.

once by the plants should help cotton in fields where the nitrogen originally applied has leached out.

Moderate application of 75 to 100 pounds of nitrate of soda or 60 to 70 pounds of sulphate of ammonia per acre should be given at once to corn and sweet potatoes where needed, he added. Additional applications are not necessary for tobacco, but breaking out the middles and ridging the rows will put more fertilizer in reach of the plant roots and promote better growth.

Any man who has been married very long will tell you that if you can get through breakfast without a fight you're good for the rest of the day.

All of us like a man with a sense of humor, but not the humor a few fellows can see in a flat tire.

Schedule Complete For July Meetings Of Home Demonstration Clubs

Thursday, July 7, Morning Star group at the school house 2:30 p. m. Monday, July 8, Junaluska club, with Mrs. Doc Boyd, 2:00 p. m. Monday, July 11, Francis Cove club, with Mrs. Robert Boone, 2:00 p. m. Tuesday, July 12, Cecil club, with Mrs. Coy Pressley, 2:00 p. m. Wednesday, July 13, Maggie and Maple Grove club, (joint meeting), with Mrs. Herbert Platt, 2:00 p. m. Thursday, July 14, Bethel club, with Mrs. L. L. Smathers, 2:00 p. m. Friday, July 15, Crabtree, Rock Spring, Iron Duff and Fines Creek (joint meeting all day), at Crabtree school building, 10:00 a. m.

Food Conservation and Picnic Lunches will be the major topics at the July club meetings.

Haywood and Jackson county 4-H club camp at Swannanoa is scheduled for July 18-22, State 4-H Short Course, State College, Raleigh, will be July 25-29.

Farm Questions and Answers

Question: How do I make Bordeaux mixture for spraying my apple trees?

Answer: Three pounds of blue-stone should be dissolved in a wooden container for about 12 hours. This solution is then added to about forty gallons of water and thoroughly mixed with four pounds of lime in the form of a paste. Enough water is then added to make fifty gallons of the solution. This is the standard 3-4-50 Bordeaux mixture. This solution is used to control codling moth, bitter rot, and fruit spot on apples. For late fruit, one pound of arsenate of lead should be added.

NOTICE

All persons will take notice that the undersigned has on the 18th day of April, 1938, qualified as Administrator of the estate of Elizabeth Rathbone, deceased. All persons having claims against said estate will present them to the undersigned on or before the 6th day of July, 1938, or this notice will be pleaded in bar of any recovery thereon. All persons indebted to said estate will please make immediate payment.

This the 6th day of July, 1938. JOHN RATHBONE, Administrator of Elizabeth Rathbone, deceased.

Farmers Federation Pays Semi-Annual Dividends

A semi-annual dividend of three per cent was distributed July 1 to stockholders of the Farmers Federation.

Declaration of the dividend was made at a meeting of federation directors at the central office in Asheville on June 22. It keeps unbroken the record of regular semi-annual payments on federation stock since dividends were resumed in 1934.

Dividends on common stock were paid in cash through federation warehouses and dividends on preferred stock were paid by check. All shareholders of record June 22 are eligible to share in the declaration.
