Labor Day 1940

Greetings from 3000 Employees of

The American Enka Corporation

Enka, North Carolina

America has long glorified, and the world has envied, the high plane of living and working enjoyed by the people of this country. Some attribute this state to the natural wealth of the country—others believe it is the country's geographical location. But, every thoughtful man and woman knows that American standards were achieved by hard work — by thinking and planning and the application of labor to our natural resources.

Cheap Electricity has long been the accepted ideal servant in the home, on the farm, in commerce and industry. Its contribution to living and working standards is recognized as a prime factor in promoting constant improvement in these standards.

Even in times of extreme emergency, such as our nation faces today, Electricity will continue to advance the American System of working and living.
