

Baptist Training Revival Started Wednesday Night

The Training Union Enlargement Revival, which is to be conducted at the First Baptist church with Harvey Gibson, Baptist Training Union secretary of the state group in charge of activities, opened Wednesday night with a mass meeting. The revival with an able crop of approved leaders assisting, will continue through next Wednesday, according to an announcement by the pastor, the Rev. H. G. Hammett.

Beginning tonight, the nightly program will open at 7:30 and will include classes and inspirational messages, and special music.

The courses and books for study and the teachers include the following: Story Hour, "God's Great World," teacher, Mrs. Emmett Green; Juniors, "Living For Jesus," teacher, Miss Louise Paschell, of Reidsville; Intermediates, "Witnessing for Christ," teacher, Mrs. Harvey Gibson; Young People, "The Winning Witness," teacher, Harvey Gibson, Raleigh.

Other activities include a survey and evaluation of the church, Sunday School, and Training Union Rolls, and a contact and visitation emphasis aimed at touching every home in the church. Sunday will be featured as Rally Day in every phase of the church activities. Special emphasis will also be placed on leadership consecration.

Cannery Ready To Pack Beans

(Continued from page 1)

contracted growers, in cases where the beans are the right variety. The price being paid has been set by the OPA with a maximum of 5 cents per pound.

The plant will be ready to receive beans during the coming week and will operate sufficiently to take care of all produce brought in, according to Mr. Barr. The government has asked for 50,000 cases for the armed forces and farmers are urged to cooperate with the plant in reaching the supply desired.

There are a number of growers in Avery County who will also bring their produce here later in the season, as their season is not as early as that of Haywood.

During the past year the Haywood Mutual Cannery has invested between \$15,000 and \$20,000 in equipment and expansion. The capacity of the plant has been more than doubled by the recent investments, which have been made to serve both the present and the post-war program of the cannery.

The present output now is around 90 cans, number 2 and 2½, per minute, which is equivalent to 54,000 cans in a ten hour run, according to Mr. Barr.

The new equipment and improvements have brought the plant up to date. Canning authorities who have inspected the plant, state that it is the best of its kind in North Carolina.

The empty cans are now carried from the warehouse to the place of filling and then after being filled are closed automatically, processed and returned to the warehouse through an automatic cooling tank.

With the new equipment the expansion of the value of the Haywood Mutual plant has been placed at around \$40,000. Some of the machinery used here has been brought from the plant which was formerly operated at Canberry. Plans are now being made to build a new plant at Newland, which will be operated along the same program of the local plant. The Newland plant will cost between \$40,000 and \$50,000, it was learned from Mr. Barr.

Physicist's Discovery Lengthens Light Beam

The United States lighthouse service in peacetime operates 33,000 navigational aids ranging from lanterns hung on posts along our great rivers to the 9,000,000 candlepower beam of a modern lighthouse.

With our entrance into the war, the lighthouse service came under the direction of the United States coast guard and the jurisdiction of the United States navy.

The peacetime operation of a lighthouse was made possible by a 19th century physicist who discovered that lenses and prisms could be so arranged and manipulated that they would collect and concentrate even a feeble flame and multiply it into a tremendous beam of many candlepower.

Typical of what his discovery made possible is the \$20,000 lens of the Navesink (N. J.) lighthouse where a modest 2,400 candlepower lamp is magically multiplied into 9,000,000 candlepower, a light that probes easily through 22 miles of darkness.

This light revolves in a pot of lubricating mercury, six times a minute. It sends beams in two directions at once, giving two flashes to a revolution. It flashes at the same spot every five seconds, thus giving ships near Sandy Hook vital directional information.

Ceiling Prices Placed On Beer

A ceiling price has been put on all beer, it was announced by the war price board here yesterday. All present prices of beer is based on the retail price for the same brand as of April, 1943, it was said.

Retailers are divided into three groups, 1-B, 2-B and 3-B, all based on volume of business done.

Sgt. Rufus C. Ratcliff Now Serving In England

Sergeant Rufus C. Ratcliff, son of Mr. and Mrs. R. E. L. Ratcliff, of Ratcliff Cove, has arrived in England, according to a message received by his parents. Sgt. Ratcliff entered the service in 1942. Prior to entering the army he was employed by the Waynesville Laundry.

One may have an abundance of things without having the abundant life.

Overseas

PVT. GROVER G. TRANTHAM, of Clyde, is now serving overseas. He was inducted on December 18, 1943, and took his basic training at Camp Cooke, Tex. He is the father of nine children. At the time he entered the service he was rated as a grade man in the North Carolina Shipyards in Wilmington. His son, Kenneth Trantham, is taking care of the family during his absence from home.

DEATHS

Donald Albertus Lee

Funeral services were held at 11 o'clock Sunday morning at the home of the parents on Hyatt Creek, for Donald Albertus Lee, seven months old son of Mr. and Mrs. Luther Lee, Jr., who died at the Haywood County Hospital on Friday night at 8:25. Rev. Will Queen officiated. Burial was in the Platt cemetery.

Surviving are the parents; two small brothers, Johnny Mack and Joseph Michael Lee.

ber 18, 1943, and took his basic training at Camp Cooke, Tex. He is the father of nine children. At the time he entered the service he was rated as a grade man in the North Carolina Shipyards in Wilmington. His son, Kenneth Trantham, is taking care of the family during his absence from home.

NOTICE

Mrs. Carrie E. Hannah is now associated with us and will devote her time to Real Estate, Sales Service and Property Management. Mrs. Hannah comes to us well qualified and capable of handling your Real Estate Problems.

We now have a number of desirable listings. Call us for appointment.

If you have property for sale and it is priced right—list it with us.

Clean Powder Puffs to Prevent Germ Collection

Every woman knows that a clean powder puff is the only kind she ought to use. A soiled one can be a germ carrier. That goes for the puff on the dressing table as well as for the pad in the compact.

Both puffs and pads can be used and reused if given proper washings, so that the small supply on hand now can be kept in service for many months. Puffs that have a filling of surgical cotton, as most of the velour puffs do, can be washed most easily if the stitching is loosened for about an inch and the cotton is removed and thrown away. Shake out as much loose powder as possible, then soak the velour cover in lukewarm suds. If face cream or foundation cream has made the cover greasy, fairly warm suds and light rubbing will be necessary to dissolve the smudges. When the puffs are thoroughly clean, rinse in clear lukewarm water. Pat out the excess moisture on a soft cloth and dry flat.

The velour texture can be restored to a large extent by gently fingering the fabric after it is dry. Refill the puff with a little wad of cotton, sew up the opening, and the puff is ready. The soft felt-like pads used in compacts can be washed without any special trouble. Simply soak in suds after slipping out as much powder as possible, dunk up and down until clean, and then rinse and dry.

Oil From Tomato Seeds
A source of oil that should not be overlooked in the United States is the oil that can be obtained from tomato seeds. Every year huge quantities are processed in the canneries of the United States. Jamieson (1932) states that seeds constitute from .5 to .6 per cent of the tomato fruit.

Recent experimental work showed that the ether soluble material of dried tomato seeds extracted in a Soxhlet apparatus for eight hours amounted to over 20.62 per cent. It was also reported that when the whole residue of tomato cannery waste was extracted an ether soluble fraction of 12.4 per cent was obtained.

The analysis of the residue yielded the following data:
1. Ratio of pulp to seed—approximately 1.6 to 1.
2. Moisture content of the residue—27.1 per cent.
It was estimated 250,000 pounds of oil could be obtained from the residue.

Mud Stains
Mud stains, especially on children's clothes, are among the most frequent clothes cleaning problems in spring time. Mud stains are not difficult to remove if dealt with promptly and properly.

Clothing specialists advise letting the mud dry, then brush off as much as possible with a stiff brush. If the mud is on a wash garment, soak in clear cold water then wash with soap and warm water. If the garment is not washable, sponge the stain with denatured alcohol. For rayon and colored clothes use diluted alcohol. Twice as much water as alcohol is the proportion.

Mud often does more damage to leather than to fabric. If left to dry on shoes it may make a permanent stain. It should be removed at once with a wet cloth or stiff brush. Polish shoes when dry.

Wash Dress

If an old dress shows no holes and is color-fast and reasonably shrink-proof, start washing with a good tubbing in lukewarm sudsy water. Wash each dress separately, even if several are to be given the soap-and-water rejuvenation treatment. For both wools and rayons, use lukewarm water throughout the laundering and rinsing. Support wool and knitted rayons with two hands whenever lifting from one tub to another to avoid having the weight of the water pull them out of shape. After the last rinse, roll quickly in a large cloth to remove excess moisture, unroll, and dry on a dress hanger.

"TEA-rific!"

That's what you'll say of our taste-thriller, heat-chaser — ICED TEA. Cool as the beach... refreshing as a swim. Enjoy a tall, tall glass—frosty-cold — at lunchtime, dinner-time, anytime! Tasty... thirst-quenching... TEA-rific!
