

Dayton Products--known as a standard of HIGH QUALITY in time of War and Peace—

In 1934, The Dayton Rubber Manufacturing Company made from Neoprene the first all-synthetic rubber tires ever produced in America.

Due to continuous research, Dayton Rubber has become one of the leaders in the synthetic rubber field, and the erection of the Waynesville plant in 1941 for the manufacture of products for the textile industry was one more step in the leadership for our company.

Needless to say, the products of the Thorobred Division of Dayton Rub-

ber here in Waynesville, have made many valuable contributions to civilian and military needs with synthetic rubber products. Right now, production is centered on meeting the requirements of our fighting men with quality products that will enable them to get back home alive and end this war quickly.

Every facility for making the highest standard products will be used on civilian production when peace comes. Then, as always, Dayton Rubber Products will be known as the standard of high quality.
