> Mexican Border Uprisings In the spring of 1916 Pancho Villa with a small band crossed into New Mexico and killed a number of Americans. To prevent further outrages President Wilson sent a detachment of the regular army, under the command of General Pershing, to pursue Villa. The tro trated 400 miles into Mexico but were unable to capture the bandit. A month after United States troops entered the country, a small force of United States soldiers were attacked and reinforcements were sent to Pershing. In June a battle occurred at Carrizal where Pershing's men were ambushed and many of them killed. United States troops remained in Mexico until early in 1917 when gradually they

Young humming birds will eat every 25 minutes; chicadees more than 30 times every half hour, Young wrens require more food than any bird and have been known to eat more than 1,200 times in 16 hours.

Istanbul Key City

The history of 30 centuries bristles with proof of the strategic importance of the land and waters surrounding Istanbul, as old Constanti- been converted into a truck and known. Today, Istanbul stands undimmed as the key city of a key area in the commercial and military schemes of world powers.

Grown to a port-metropolis of nearly a million people, Istanbul lies at the crossroads of two historic routes of trade and conquest. The city is in Turkish Thrace, Turkey's tiny corner of southeastern Europe, the land bridge that joins Europe to Asia between the Black sea and the Aegean arm of the Mediterranean. And it lies on the Bosporus, the eastern gate of the Dardanelles-Sea of Marmara-Bosporus water corridor - generally known as "the straits" - that cuts across the land bridge to join the two busy seas.

Both the straits and the land bridge to their north have been Turkish for nearly 500 years. But the succession of wars, treaties, conventions and agreements which have threatened or affected control of the straits has seemed unending, with Russia almost always a par-

Co-Ops Increase Net

Savings in Business Year During their last business year, 137 farmer-owned elevator companies which operated 181 plants did a total of \$61,451,102 worth of business in buying grains and farm produce and in selling farm supplies, and the companies increased their net savings by an average of \$14,229 during the year.

The average net savings of these companies was equal to earning 20.4 per cent on the net worth of the companies at the end of the year and also was equal to a little more investment. The savings made by the co-operative elevators can be prorated back to patrons in proportion to the amount of business done by each individual.

Some of the changes in business services of the companies are a 250 per cent increase in feed grinding for patrons in the past 15 years, a great expansion in mixing feeds and cleaning seeds, and such an increase in hauling that it is a handicap to the company in some cases. The recent great rise in quantities of soybeans handled is a wartime development.

Portuguese Homeland The Portuguese homeland, about as big as Maine or Indiana, counts 7,700,000 people, twice the population candy in your pockets to eat on the of the Hoosier State. Three-fifths of the area is under cultivation. Cork, port wine and sardines are the main exports, dependable as a source of national income because competition of other nations in supplying them is limited. Lisbon, capital city of 700,000 people, had developed in prewar years as a great air transportation center and crossroads of international missions because it is nearest European capital to the United States. Only 18 months ago the 150-year-old U. S. legation in Portugal was raised to embassy status. Portugal's colonial empire shrunken from its heyday by the loss of Brazil and oriental areas, is still 26 times larger than the homeland. By far the biggest parcels are Angola and Mozambique, in Africa. The Azores and Madeira, Portuguese islands in

Scotland Yard

the Atlantic ocean, are regarded

as an integral part of the republic.

The original Scotland Yard is a group of buildings surrounding a courtyard at the southeast corner of Charing Cross, London, famous as headquarters of the metropolitan police force for many years. The name is derived from the old palace that was situated on this site and used by visiting Scottish kings and ambassadors from the 10th to the 12th centuries. In 1890 the metropolitan police, including the detective department, moved into an imposing group of buildings on the Thames embankment. The new quarters were christened New Scotland Yard by Police Commissioner James Monro. Generally the term is used with reference, not to buildings, but to the detective department, world-renowned for tracking down criminals. Lovers of "whodunit" stories are among the most enthusiastic admirers of Scotland

Aerosol Bombs More than 35 million of the one-

pound aerosol bombs-chiefly loaded with pyrethrum as a mosquito killer-had been manufactured for the armed forces when the war ended. In the later stages of the war DDT was added to pyrethrum in many of the bombs for the sake of its effect as a fly killer as well as a mosquito killer. Some companies are already marketing aerosol bombs and many others are interested in manufacturing them under the public service patent which covers the invention by federal scientists. For the protection of human beings in airplanes, tents and buildings, freon gas has been used as the propellant in aerosols because it is conpoisencus and noninflammable. For control of insects in field crops the less expensive gas, methyl chlowide can he used with good results.

Induces Sweetness To bring out the natural sweetness each quart of fruit.

Three Killed When In Power Politics Truck Overturns

nople (and older Byzantium) is now had a light cloth top, which completely collapsed when the truck overturned. The vehicle fitted into the bottom of the branch and it was necessary for a wrecker to be brought to the scene to lift the truck off of the bodies.

The men had gone after working hours to get some firewood up it the Mooney Cove, according to the officers. The accident occurred about three-fourths of a mile from the Dellwood road. The branch is small mountain stream, about our feet wide and very shallow out the road which winds around up to the cove was soft from he recent snows and rains.

The bodies were brought to Garett Funeral Home as soon as they were taken from underneath the
