Answer: If you're thinking of "original ideas", all that we can be sure of is that they don't "come into our minds" out of the wild blue yonder; they rise out of the "unconscious". Basically each idea starts from a wish or "drive" and represents a real or imagined way of getting satisfaction for it: an invention, for example, may start with a wish to save yourself work, to win fame, or to make money. But little is known of the mysterious process by which we put two and two together so that an

idea eventually "takes shape."

Answer: Yes. There is a type of person who is thrown into a panic by being treated too kindly and he will shun you like the plague if you attempt to do him favors: he firmly believes you want to "put him under obligation" to you and (Copyright, 1940, King Pentures Symmetre, Inc.).

Answer: Yes, says Dr. Armando Ferraro of the New York State Psychiatric Institute. He feels that psychosomatic medicine has emphasized the mind's effects on the body to the point where it tends to ignore the fact that physical conditions may produce mental disturbances. A disorder of the "autonomie nervous system" which controls our movements and sensations may arouse states of "anxiety" such as occur in anxiety neurosis. What we know as mind and body are two aspects of one organism and whatever in-

force one affects the other also.
