### AN EDITORIAL

#### We Can't Dodge Facts

In this section today are the pictures of a large number of the 788 sixth graders of Haywood county.

During the past week, and today, we are publishing the pictures of the 283 high school graduates from Haywood high schools this year.

Do these two comparative figures mean anything to you—788 and 283?

It means just this, that in six years, the potential graduating classes of Haywood high schools will be almost three times what it is today.

This is not guesswork. It is actual facts, of the situation right here in Haywood, and

we are proving our point with pictures.

There is not a single high school in Haywood today but what was crowded with the total graduating class of 283. Just try to imagine what the situation will be just a mere six years from now, with three students where there is one today.

These facts cannot be denied, nor overlooked.

These facts mean that immediate plans must be undertaken to take care of the needs. The situation will grow worse each year, and we only took the sixth grade as an even start, and for the sake of a six-year period of calculation.

Such facts as these mean that Haywood and the rest of the State will be obligated to vote overwhelmingly for better schools on June 4th.
