

**MORE ABOUT Accidents**

(Continued from Page 1)

the right front end a glancing blow. State Highway Patrolman Charles Lindsay of Sylva investigated the accident.

The coach sustained several hundred dollars' damage. The station wagon was less seriously battered.

On Wednesday afternoon State Highway Patrolman Bill Wooten didn't have far to go to investigate the second accident.

His car was in it. The Patrol car and a coupe collided about two miles west of Canton early in the afternoon.

The officer's auto suffered a fractured radiator and a generally damaged front end.

The coupe required treatment for a dent in the trunk.

The third accident happened about three minutes later. A 1949 Studebaker sedan and an earlier model truck collided just west of the Canton city limits.

The truck suffered a broken bumper. The sedan sustained a dented door and fender. Both left the scene under their own power after State Highway Patrol Corporal John L. Carpenter investigated. Total damage amounted to less than \$50.

Observed one officer after the third accident: "It just proves this: if you're going to have an accident, have it slowly."

new headquarters near Waynesville.

Prior to the launching of the new program, the Haywood organization was operating 750 miles of line serving 3,850 members in Buncombe, Haywood, Jackson, Macon and Transylvania counties of North Carolina, and Rabun County in North Georgia.

These projects are now in the stage of final planning, and construction contracts were scheduled to be awarded soon, the manager said.

The federal Rural Electrification Administration has allocated the local group a total \$2,041,000.

The cooperative has repaid \$167,679 on principal and interest. This includes \$35,000 paid in advance of the date due.

Canned mushroom soup combined with canned chicken soup produces a combination that is unusual and tasty.

**New Atomic Plant Ready To Work**

**HOT STUFF** — This control console, center, and panel will melt if anything slips.

By HOWARD W. BLAKESLEE  
AP Science Editor

UPTON, N. Y. — Enlarge an airplane cockpit and its controls about six times and you have a good likeness of the controls of the newest atomic reactor.

Add a copilot for the atomic controls—his job to double-check.

This reactor, here at the Brookhaven National Laboratory, is America's first large post-war atomic pile. It may start operating this year. The reactor is hidden inside a big, six-story, warehouse-type structure, with peculiar windows. They are massed in a few places, leaving most of the outer walls solid and bare.

The controls are on a console, as large as the console of the greatest pipe organ, and on an instrument panel covering the wall as high as a man can reach and much wider than the console.

You will start this atomic monster with two fingers. They turn a dial like that on a radio and television set. This turn will move some long, baron-steel rods, which stick into the square reactor hidden behind massive walls in front of you. The rods are like hatpins that have been pushed full length into a hat.

The electronic dial will cause them to pull slowly out of the reactor. That will start the atomic fire.

The radioactivity will rise to intensities that would be fearful except for the protective walls. In a few minutes the pile will be equal to hundreds of tons of radium.

Simultaneously heat will rise,

equivalent to the heat of a ten thousand kilowatt power station. But this reactor is for scientific experiments only.

This atomic console plays soundless music. Neither the radioactivity nor the heat makes the slightest noise. There are no moving parts. You can hear a whisper, or a pin drop. The first sound will occur when the remote control fans turn on to drive the heat out of the reactor and up a chimney 300 feet tall.

The reactor has a safety valve. This comprises two handles set on the wall. They are not electronic. They can be moved by human hands. They will dump a load of shot down a hole into the middle of the reactor.

This is no ordinary shot. It is boron-steel and the boron absorbs neutrons, atomic sparks which make the atomic heat chain reaction. The boron shot quenches the neutrons like water on a fire and just as fast.

The handles are named "scram control," meaning the sort of danger that makes you want to run. This reactor cannot possibly explode, but it can melt, and that would cost millions of dollars, plus a risk of radioactive contamination at the site.

Aircraft designers are replacing rubber with stainless steel wire cushions to protect delicate instruments from shock and vibration.

of starving people in India to whom this food would mean life and health, and

WHEREAS: The Communists in India are calling attention to this unshared surplus and using it as dangerous propaganda against the United States, and

WHEREAS: The Christian motivation underlying our American democracy and the interests of the newborn democracy in India are one and the same when faced with threats to human personality,

BE IT HEREBY RESOLVED by this Missionary Conference of the Southeastern Jurisdiction of The Methodist Church, in session at Lake Junaluska, N. C., July 26, 1950, that we urgently and respectfully call upon the United States Department of State to provide a method of sharing this surplus wheat and other commodities with the great Republic of India on terms which the Government of India can accept, immediately, or as soon as proper arrangements can be effected.

Following Bishop Pickett's first address here, spontaneous offering from hotels, individuals and groups, were sent to the Bishop with the request that the money be used in his work in India. This collection totaled slightly more than \$5,000.

(Continued from Page 1)

Luelius Wood of the home; a daughter, Dorothy Mae Wood of the home; the mother, Mrs. Emma Wood of Waynesville; four brothers, T. A. Wood of Tennessee and Roy, Willie and Howard Wood, all of Waynesville; and a sister, Mrs. Luther Carver of Waynesville.

Arrangements were under the direction of Crawford Funeral Home.

**FEPC BILL KILLED**

Sen. Frank P. Graham of North Carolina was one of the Southern Democrats who voted against the proposal which would have prevented a filibuster when the FEPC bill comes up. The measure was killed in the Senate when it failed to get a sufficient plurality.

During his unsuccessful run-off campaign against Willis Smith, he had refused to announce his intentions regarding the vote on the proposed gag rule. Some Southerners believed he would have won renomination if he had done so. Later, Graham said he voted against the gag rule because it is a rule to end a filibuster and "there was no filibuster in progress."

**WTHS Band To Start Practice Next Week**

Band practice will start next week for some 150 of Waynesville High School's musicians.

This was announced today by Band Director Charles Isley.

The concert band will resume practice at 7:30 p. m. Tuesday after a two-months layoff.

Mr. Isley expressed hope that if enough members attended August practice, several out-door concerts can be given as an added attraction to Waynesville's summer visitors.

He is inviting all alumni of the band, and visiting musicians from other schools, to play in his group.

Practice for the military band will be resumed Thursday at 9 a. m., while the junior band will practice the same day at 2 p. m.

**Rolling Stock**

More new freight cars and locomotives were installed in service in the first seven months of 1949 than in any corresponding period in about 25 years.

**West Point President**

There was only one West Point graduate who became President of the United States—Ulysses S. Grant.

**Watch Out for That Frost!**

By ELEANOR ROSS

COMES the warm weather and the refrigerator really does get a workout. But whether it does a fine job, no matter the age of the machine, depends upon the service and care it receives.

If you want to give the refrigerator the best of care, you'll watch the frost on the evaporator (where you keep the ice trays) and you'll never let it get more than a quarter of an inch thick. When the frost piles up beyond that depth, it's high time to defrost, unless of course, you are the proud possessor of one of those new automatic-defrosting jobs.

Here's how to defrost the refrigerator the quick way; the only sensible way to tackle the job when the weather is hot and energy low. First, turn off the refrigerator or turn to defrost. Remove ice trays and all food and empty ice cubes into ice bucket or bowl. Place tray or pan under frosting unit to catch frost and water. Fill empty trays with hot, hot water, return to freezing compartment. If trays are the waxed, quick-release type, use some other container which will fit in the unit (hot water may melt wax). Or place large pan of hot water just below the unit.

When frost is gone, and the refrigerator really does get a workout. But whether it does a fine job, no matter the age of the machine, depends upon the service and care it receives.
