DU PONT HOUSE PAINT

CLEANS ITSELF!

Buzzling white... year after year! That's how your house will look when you paint with Du Pont House Paint. It actually cleans itself... sheds dirt and dust with every heavy rain! Normally, this "Self-cleaning" process starts within a few months. However, excessive soot or heavy shade, or stains from metal surfaces such as copper screening, may interfere with or delay this process. Treat your house to this long-lasting beauty.

Specify "Self-cleaning" Du Pont House Paint in white or popular tints. Your Du Pont dealer or painter will be glad to tell you how the "Self-cleaning" process works in your area. And where the surface is new wood or badly weathered paint, start with a coat of Du Pont House Paint Primer. It assures maximum adhesion of the finish coat.

Save the Surface and You Save All!

MAGNIFIED CROSS-SECTION SHOWS SELF-CLEANING PROCESS

1. All paints collect dirt and grime during the first few months.
2. With Du Pont House Paint, a fine white powder forms after a few months on surfaces exposed to sun and weather.
3. Rain washes off this powder and with it, much of the accumulated dirt and grime.
4. Self-cleaning leaves surface clean and white... keeps it sparkling white for years. The cleaning process is gradual and does not adversely affect the long life of the paint.
