"Calm, Careful"

All North Carolinians who wish well for their State will endorse the statement of Governor Umstead that "this is no time for rash statements." This, says the Governor in an official comment on the Supreme Court's recent decision is a time for "calm, careful and thoughtful study." Anybody who undertakes to manufacture fury in this time of great problem, to stir the fears of the people or complicate a difficult State problem for their own personal or political benefit acts in disregard of the safety of North Carolina.

Governor Umstead could not have made his statement at a better time. The heat of a political campaign increases the danger that some men might act in carelessness of the future welfare of the State if they thought they might get some quick benefit for their candidate or candidates. But as the Governor's statement suggests, such "rash statements" in the spoken word or the printed word, said publicly or spread surreptitiously, could do much damage and no good.

This is a time for "calm, careful and thoughtful study," not for rash statements or even more dangerous - or calculatedly violent - acts. - Raleigh News and Observer.

Time To Stop

One of the pride and joys of the many communities in Haywood County in their CDP projects has been road signs.

Some communities have gone to much expense and effort to put up elaborate and attractive signs.

Some of these same communities have suffered financial loss, and have had their civic pride injured, when the signs have been damaged. Some of the signs have been shot, others rocked, while still others have been splattered with mud.

It is unfortunate that anyone would ever do such a thing, when the signs have a definite place in the community, and add to the attractiveness and serve as useful informa-

Some CDP groups have just erected new signs, and are keeping a sharp eye peeled for those who are inclined to damage such property. We suspect that a person caught damaging one of the signs will regret many times his ill chosen pastime—and rightfully they should. We trust the days of destructiveness are over, but if not, then the offenders should be made to pay the price of renovation, as well as the severe penalty which such a folly carries.

The average person is just as good as his word-if he doesn't talk too much.

Spring flowers are now in bloom and the best part of it is that you can take your pick.

Defines Role Of Teacher

A teacher has six roles to play as a member of his profession, according to the California Council on Teacher Education.

These six roles, recently published by the NEA Commission on Teacher Education and Professional Standards, are the following:

1. A Director of Learning. This is the most widely recognized role, requiring ability to plan, administer, and evaluatae learning activities.

2. A Counselor and Guidance Worker. It is generally recognized today that, to the degree that the school has a counseling program, it is carried on largely by the teachers and primarily through classroom ac-

3. A Mediator of the Culture. Our civilization and the culture depend on the effectiveness of our schools. They require citizens with the ideals and values peculiar to a democracy and skilled in the techniques of democratic procedure. In equipping his pupils with these attitudes, ideals, and proficiencies, the teacher becomes a mediator of the culture.

4. A Member of the School Community. In the curriculum building, participating in the school government, extra-curricular activities of the school as a whole, the teacher is sharing in the responsibilities of the overall school program.

5. A Liaison between School and Community. As a member of the community, the teacher has a responsibility to interpret the educational program to the public. The effectiveness with which this is done determines, in large measure, the degree to which the public understands and co-operates in the educational program.

6. A Member of the Profession, Many of the important responsibilities are fulfilled by the teacher, not as an individual in the classroom, but as a member of the organized profession. In general these include two general functions; securing support in building the educational program needed for our times, and improving the welfare and quality of membership of those in the profession to attract and hold those who should enter.

Best Source Of Protein

Americans are hearty meat eaters. We consume 65,000,000 pounds of it every day enough to fill 2500 railroad refrigerator cars. Our annual per capita consumption is 76 tion. pounds, which is well ahead of most other countries.

Yet there are nations which eat far more meat than we do. To take the extreme example, the average citizen of Argentina, a country whose economy has long been largely based on cattle, puts away 248 pounds of

Many authorities think that within the next 10 years American beef consumption can and should rise to perhaps double the current level. The American National Cattlemen's Association is now engaged in a na- thing tionwide beef promotion program, and packers and retailers are cooperating. The program's theme is, "Beef is your best source

That is much more than just an attractive slogan. It's a matter of scientific fact. One of the major discoveries of recent years in . the field of dietetics is that beef, because ably longer than the songs they of its high protein content, contributes greatly to the mental and physical health and vigor of individuals. It also has been found valuable in aiding the treatment and recovery of people suffering from many forms of illness. And it is a food which the average person can eat once or more a day and still II. find palatable.

Whatever increase in demand for beef and other meats comes in the future will greatly benefit the farmer, and our great meat industry is prepared to handle it.
