Feline Fire Alarm

CLAYTON, N. Y. (AP) — A gray and white cat named Muggsy has seven toes on each foot and he makes good use of them. When an electrical storm knocked down a high-tension wire outside the home of Mr. and Mrs. Cecil Baker, Muggsy's owners, the cat clawed at the blankets of Mrs. Baker's bed until she woke, saw sparks showering about the house and notified the power company.

The next night Muggsy again woke Mrs. Baker when a warehouse fire became visible from the bedroom window. Police said her phone call was their first word on the blaze.

The Human MACHINE

To function properly, a machine needs constant attention. It needs the right amount and kind of lubrication. It needs to be kept clean and in good repair. Above all, it needs the supervision of someone trained to know how it works, and what to do if it doesn't. The human body is more sensitive, more complex than any man-made machine. There is much you yourself can do to keep it running smoothly. But when the machinery begins to slow down, or show signs of wear, it needs the attention of a trained Engineer. Call your doctor. He's the man who knows how the wheels go around.
