Ass't. County Agent Advises Plan Feed Crops Now

With the increased production of hogs and the shortage of feed, Duplin County farmers need to plan now for feed crops that will bridge them over until the fall harvest. A few acres of soybeans with a small feeding of grain and a full feeding of a good mineral mixture will go a long way toward solving the feed problem according to L. F. Weeks, Assistant County Agent.

Acres of soybeans planted immediately in narrow rows should enable a farmer to "carry" a litter of spring pigs from July to October with only a small amount of grain. By this time a new corn crop should be available to finish these pigs for market or home use.

Experiments have proved that 60-100 pound pigs on soybeans pasture and receiving only one pound of corn per day per 100 pound of liveweight made an average daily gain of over 1 pound per day.

When soybeans are used for grazing the hogs should be turned on them when they are about 12 inches high. It is best to divide your field so that alternate grazing can be followed.
