L. F. WEEKS

Weed Control

Where chemicals are to be applied for weed control on tobacco plant beds, they should be applied 60 to 90 days ahead of seeding. There are two materials that may be used, Cyanamide or Uramon. Apply 3/4 lb per sq. yd. and mix thoroughly to a depth of three inches. Then put 1/4 lb per sq. yd on top and leave to dissolve. Treat a yard wider than you expect to plant. If dry weather follows application, wet down the bed thoroughly.

Growers who plan to use chemicals should get them as soon as possible.

Corn Production

It is encouraging that corn yields have increased from an average of 20 to 23 bushels, 4 or 5 years ago, to an expected 29 bushels this year.

Several of the fields that the growers entered in the Duplin County corn production contest have been checked for yields and to date Mr. J. M. Holland of Mt. Olive has registered the highest yield of 91 bushels per acre. We are still hoping to find a 100 bushel per acre field in Duplin. There are several fields yet to be checked.

Permanent Pastures

More interest has been shown in seeding Ladino Clover and Orchard grass in permanent pastures this fall than in any previous fall. It is now getting late to seed fall pastures but preparations can be started for spring seeding in February.

Temporary Grazing

In order to increase the amount of grazing from Rye Grass and small grains an application of 300 to 500 pounds of general fertilizer such as 5-10-5 should be applied at seeding time and in fall and spring and application of nitrogen.

The U. S. Department of Agriculture has announced that the Commodity Credit Corporation will buy rice on a competitive bid basis to meet export requirements.

**Gene Holland
Compares Hybrid
Corn Production**

A good comparison of hybrid corn production and open pollinated variety on the same farm was recently made by Gene Holland, of Warsaw, Rt. 2, and a tenant on the same farm according to V. H. Reynolds, assistant county agent. Gene planted an acre of N. C. 26 hybrid, using 200lb of 5-7-5 fertilizer and 400lb of soda. His yield was 77 bushels. The tenant planted an open pollinated variety using 200lb of 5-7-5 fertilizer and 300lb of 10-0-10. His yield was 52 bushels. Both fields were planted in 4 foot rows, 18 inches in the drill.
