HOW TO SHOOT A RIFLE

By ARTHUR E. COOK

National and Olympic Rifle Champion

Trigger Control

Control of the trigger can make or break you as a shooter. The accepted movie hero technique of yanking at the trigger with hardly more than a glance at the target is bosh. You can't hit anything consistently that way.

When your sights are aligned on the target the only way to get off the shot is to squeeze the trigger with such a smooth and steady motion that you do not disturb that aim. The trigger is squeezed by a steady movement of the forefinger only.

Speed and smoothness in the trigger squeeze can be combined but it takes practice and the best way to practice is with an empty gun. Aim at a small bullseye across the room and carefully let-off each shot. Since the rifle does

not actually fire you can see your mistakes.

Another thing—while squeezing the trigger stop breathing and relax. The rise and fall of the chest while breathing will throw your sights off the target. Relaxation will reduce your pulse beat, which is another disturbing factor in precision aiming.

One final hint—always follow through. By that I mean keep looking through the sights at the target even after the shot is fired. This prevents movement of the gun before the shot has left the muzzle and often enables you to see where your shot hit when you are shooting in the field.

(This instruction based on the book, "HOW TO SHOOT A RIFLE," published by The National Rifle Association, Washington D. C.)

Be sure of your target!
