ative session or otherwise consider or vote on any question in private session. A full and accurate journal of the proceedings shall be kept, and shall be open to the inspection of any qualified registered voter of the city". (Emphasis added.)

Also of interest to you should be the following sections of the General Statutes (Sections 152-40 and 153-41) which set forth the duties of the register of deeds as clerk to the board of county commissioners:

"152-40. Register clerk ex officio to board; compensation — The register of deeds is ex officio clerk of, and his compensation shall be fixed by the board of commissioners.

"153-41. Duties of clerk — It is the clerk's duty —

1. To record in a book to be provided for the purpose all the proceedings of the board.
2. To enter every resolution or decision concerning the payment of money.
3. To record the vote of each commissioner on any question submitted to the board if required by any member present.
4. To preserve and file in alphabetical or other due order all accounts presented or acted on by the board, and to designate upon every account audited the amount allowed and the charges for which it was allowed.
5. To keep the books and papers of the board free for the examination of all persons.
6. To administer oaths to all persons presenting claims against the county, but he shall receive no fee therefor". (Emphasis added.)

she was joking or not, but Eva didn't get out to find out.

There were quite a few families that were not at home. I guess they must have been working in their fields. I really don't see how they could have enough ambition to work in the fields, because they looked impossible. The tobacco was completely dry and the corn was stringy and rosy looking. Several people we talked to said if it didn't rain soon, they would lose everything they had. It is a shame to see big fields of tobacco drying up when you know how much work has been put into them.

Seeing the people in such bad spirits made me feel all down and out. It was too hot to be in a very good humor anyway so I decided to go on to Kenansville and return "Old Betsey."

day I shall be perfected." This Herod was the son of a father who was ten times married and had murdered many of his wives. The murderer himself of John the Baptist, the slave of a lewd and wicked woman — what

Tiberius Caesar who was at that time emperor of Rome was the successor of Augustus Caesar. Augustus Caesar had only one child whose name was Julia, born of his second wife Scribonia, but on his last marriage to Livia, divorced wife of Tiberius Claudius Nero, he adopted her two sons, Tiberius and Drusus. Julia was given in marriage first to Marcellus, her first cousin. He soon died without children and Julia married Agrippa, by whom she had three sons all of whom died in the life time of her father Augustus. Thus the Emperor was left with no male heir in his own family, and the imperial succession fell to his adopted son Tiberius.

Julia was a very disreputable woman and became so notorious that her father banished her from home and while in exile a daughter was born. In her 15th year the young girl met Pontius Pilate, a renegade Spaniard, who courted and married her. After their marriage Pilate journeyed to Rome with his bride and demanded a place in the Imperial litter, but Tiberius forced them back and immediately commissioned Pilate as a procurator of Judea. He immediately proceeded to Caesarea and was followed afterwards by his wife, which up to this time had been forbidden, but Tiberius made exception in the case of Pilate in order to get her out of Rome. (To Be Continued.)

FHA Members In District Meet

A district Farmers Home Administration meeting of several counties in Eastern North Carolina was held last week at Wrightsville Beach for the purpose of reviewing and discussing the basic objectives and policies of the Farmers Home Administration. Mr. J. B. Slack, State Farmers Home Administration director outlined these objectives and explained the policies to be carried out during the next year. The meeting for more productive employment and fuller production on unproductive farms; and supervision and borrower understanding of the FHA program were the two objectives that were emphasized most in carrying out these objectives. Mr. Slack said that the FHA should be able to help farm families accomplish a great deal in their farming operations.

Mr. Arthur M. Benton, County Supervisor of Duplin County, was presented a certificate of length of service award and a miniature shield for having completed ten years of continuous service with the United States Department of Agriculture.

Besides Mr. Benton those attending the meeting from Duplin County were Mrs. Grace R. McNeill, Miss Elaine Register, Wilton L. Ward and Carroll W. Jones.

Tobacco Coop. Corp Owners To Meet Friday June 29th

RALEIGH, June 11 — Carl T. Hicks, Walstonburg, President of Flue-Cured Tobacco Cooperative Stabilization Corporation, an organization of some 393,000 tobacco-producing stockholders, in the five flue-cured states, announced today that their annual meeting will be held this year in Pullen Hall, State

Benson June 31

"We're Marching to Zion"—"Beulah Land"—"Nearer My God To Thee"—"Soal We Gather At The River"—"In The Sweet Bye and Bye"—and a hundred other hymns.

This will be sung in Benson at The Grove on the fourth Sunday in June when North Carolinians from the Piedmont to the coast gather here for the 31st annual Singing Convention.

On this day, the population of the town of approximately 3,900 is increased 13 times. This year more people are expected than attend some University of North Carolina football games.

Beginning early in the morning, the contestants sing hymns and spirituals until sundown for the throngs which come to Benson to hear them.

Only once is the program broken. This is in the morning when the one and only speaker, some important civic, state, or government official is heard.

The variety of the program comes in those who sing — from soloists, duets, trios, mixed quartets, quartets composed of the various singing clubs of families and individuals.

A pre-feature of the Sing is held on Saturday afternoon as a prelude to the big event on Sunday. This is the four county singing convention when contestants from Johnston, Harnett, Sampson and Cumberland counties compete.

The day's program is just singing and every group which applies in time is eligible. They come from every section of the state. There is no charge or entrance fee and as many contestants compete as time will allow. Although the contestants occupy a greater portion of the program seeking the Silver Loving Cups, at intervals young and old alike join in for a chorus of such favorites as "The Old Ragged Cross", "Jesus Loves Me", or "In The Garden".

Poultrymen Like New Style House

The new style square poultry house, 40 by 40 feet in size, is proving to be highly popular with North Carolina farmers, says W. G. Andrews, extension poultry specialist at State College. He adds that it is being used with equal success for both broilers and layers.

According to Andrews, the square house is more comfortable for chicks in both summer and winter. It is easier to clean in winter, and results in better growth and better development of egg shells. Since it requires less wall space, it can be constructed at less cost.

If a larger floor area is desired the length of the building may be increased while the width is kept constant. An ideal arrangement, says Andrews, would be two sections 200 feet in length and a 20 foot center feed room connecting the two. An egg holding room constructed under the feed room facilitates the handling of eggs on the farm.

The material from which these houses are constructed is adaptable. Cinder blocks and wood are the best. The block house offers better insulation and in many cases the difference in cost of the two materials is negligible.

Andrews says wide doors at each end of the poultry house will allow trucks, tractors and spreaders to be driven under the house. Windows on each of the four sides will provide good lighting inside. To control ventilation, a ridge ventilator should be placed in the roof and openings should be provided near the floor level on two sides. Dirt floors with deep built-up litter are being used successfully in many cases. In either case aluminum roofing should be used.

FHA Makes 9 Home Loans

Considerable interest is being shown in the New Farm Housing program in this locality, said A. M. Benton, county supervisor of the Farmers Home Administration, today.

Out of thirteen applications received in the Duplin county office, this fiscal year for loans, there have been nine loans made.

Purpose of the new type credit is to enable farmers to construct, repair, improve, remodel or replace houses or other farm buildings. Loans are repayable at 4 per cent interest over a period of, from 5 to 33 years.

The housing program is an addition to the regular Farm Ownership program and Farm Operating program, Benton explained. During the past fiscal year, 15 farm families received Farm-Home credit to buy farms, enlarge or develop farms they already owned. Most of the loans came from private lenders, with the FHA guaranteeing repayments through its insured mortgage program. This brings the number of applicants, who have bought or improved farms with loans from this agency or its predecessor, the Farm Security Administration, to 85 since 1937, when the Bandhead - Jones Farm Tenant Act was passed.

More than 170 families obtained supervised credit during the past fiscal year to operate farms here in Duplin County. They use loans to buy seed, feed, fertilizer, livestock, equipment or farm supplies.

Families have generally proved themselves to be good debt-payers, Benton said. Out of the 85 families, who have received real estate loans in the county, 30 have paid their loans in full and the remaining 55 active borrowers have repaid an average of \$516, more than is due on their real estate loans. For operating loans, more than 95 per cent of the amount coming due the past fiscal year was repaid by borrowers.

"We like to measure family progress in several different ways", Benton continued. "Financially,

Drug For Fighting Gangrene Found

A new drug which promises to revolutionize the treatment of infections, which lead to gangrene, deep-seated chest infections, and dangerous blood clots in body cavities, has been made available to doctors by Lederle Laboratories Division of American Cyanamid Company.

The new drug, Vardase Streptokinase-Streptodornase, will liquefy dense accumulations of pus, blood and dead tissue around infected areas, thus permitting removal of the waste material through a needle with little or no surgery. Once this debris is removed, white blood cells and the so-called "wonder drugs," such as aureomycin can directly attack the infection.

The new drug is a combination of the two enzymes, streptokinase and streptodornase, which are produced from one of man's worst enemies, a disease-producing streptococcus by a fermentation process.

On the surface of the body, vicious-looking sores and ulcers can be quickly and safely cleaned with the drug. Not only is the dead material removed by its action, but the wall of the area develops healthy blood vessels which stimulate healing.

Vardase will also be useful against old cases of osteomyelitis, sinusitis, certain types of meningitis, and chronic severe infections of the joints. When injected into an infected area, it brings about a chemical change in accumulated pus and dead tissue. The liquefied waste can then be easily removed and the infection treated.

While this new biological acts against dead and dying tissue, it has no effect on living cells.

Lederle officials emphasized that the new drug will not replace present methods of surgery, but will serve as an adjunct to them.

Dramatic results were reported when vardase was used against empyema, the deep chest infection which often follows pneumonia and pleurisy. Such infections, if prolonged usually cause death or chronic invalidism of the patient. With this new drug, doctors will be able to clean the infection quickly and start immediate treatment.

Vardase will also be useful in dissolving blood clots which form in the joints, the chest and many other body cavities.

It had been known for many years that under particular conditions certain streptococci will produce these two beneficial enzymes. Only after years of research and scientific teamwork was Lederle able to produce enough of the enzymes to make clinical research possible.

A new beet sugar plant in Olin, N.C., requires from 100 to 150 tons of coal every 24 hours.

A safety record in bituminous coal mines was set in 1950 for the third consecutive year.

Small Per Cent Pass Drivers Examination

RALEIGH, N. C. — Eighteen per cent of applicants for driver's licenses during April failed to make the grade, the Department of Motor Vehicles reported today.

A total of 33,845 applications were disappointed, driver's obtaining licenses for the first time under the re-issuance program numbered 18,614 and those obtaining renewals totaled 11,437. Duplicate licenses were issued in 2,828 cases. Original chauffeur's licenses numbered 927 and renewals 38.

License examiners issued 18,164 learners permits during the month and gave 23,061 road tests. License fees amounted to \$63,448.

Smokey Says:

WHEN MAKING A CAMPFIRE IN THE WOODS A GOOD THING TO DO IS SCRAPE BARE EARTH AROUND IT!

No fire is safe in the woods — Be careful!

A new gas producer that will provide fuel for Diesel engines is on the agenda at Bituminous Coal Research, Inc.

Dr. Paul D. Sanders, Bituminous Coal Research, Inc., Editor of "The Southern Planter". "We are very fortunate in having a man who has done so much for agriculture address us," he pointed out.

The Stabilization Corporation was set up in August of 1946, and has been in operation for the past four seasons. "During this time," Hicks said, "the membership of our organization in the five flue-cured states has been served millions of dollars through the operation of the program."

"The outstanding feature of our Stabilization system," he pointed out is the fact that it is owned and operated by and for the flue-cured tobacco growers. This non profit organization is a perfect example of what can be done when a group sets out to provide a self-sustaining program designed to overcome the problems that have confronted us through the years."

Hicks made it clear that "through Stabilization's operations, every producer of flue-cured tobacco is able to get at least 90 per cent of parity for every pound of tobacco sold at auction."

"He urged all members of the organization to "make every effort to attend this important meeting. We have a good program lined up for this year, and every member should try to be on hand to participate in it."

When making a campfire in the woods a good thing to do is scrape bare earth around it! No fire is safe in the woods — Be careful!

A new gas producer that will provide fuel for Diesel engines is on the agenda at Bituminous Coal Research, Inc.
