

**HEADRESSES: REAL, NATURAL, ARTISTIC**

Man competes with nature in creating original headresses to beautify faces of lovely ladies round the world. Best in the business is Hollywood and one of the film capital's greatest products (1) is "replica" of Cleopatra's headress. It is shown curving over curls of Rhonda Fleming who plays the Egyptian Queen in the movie "Serpent of the Nile." Nature, not to be outdone by man, points to plumes (2) of Paris Zoo's Tufted Goura pigeon. Artistic headress (3) is worn after those used in Hindu dances, is worn by solo-water-ballet-star Beulah Gundling, considered one of the world's best. Crusted with tradition, authentic Balinese headress (4) is worn by dainty 13-year-old dancer Ni Gusta Raka. Member of troupe which will tour America, she is the principal performer. Her headress and gown, richly decorated with traditional Balinese figures, delight costume designers.

The month of October is a very good time to transplant evergreens of most kinds and especially azaleas and camellias. I have recently seen a number of newspaper advertisements of azalea plants for sale. Many of these are of the Indian species (Indian azaleas) such as the well known Formosa and Pride of Mobile varieties. Buyers should be warned that the varieties of the Indian species very often freeze back in central and northern planted in the vicinity of Raleigh North Carolina and are not at all hardy in Western North Carolina. Also it is usually the case that these plants offered for sale at this time of the year have been grown in States to the south of us and are not fully dormant at the time

they are shipped and the first hard frost may damage or kill them. Two years ago hundreds of these plants were purchased and when the late November freeze came practically all of them were killed. The kurume species (Japanese azaleas) are hardy in piedmont North Carolina and should be grown in the Piedmont. It might pay to plant only the more hardy deciduous species. Commonly known varieties of Japanese azaleas are Hino-degiri, Pink Pearl, Coral Bells, and Christmas Cheer. Azaleas have a shallow, fibrous root system. It is very important

that they are not planted any deeper than they were before transplanting. That is also true of camellias. They require a acid soil, and most fertilizers used should be acid forming. It is a good idea to mulch azaleas and camellias. Good mulching materials are old sawdust, leafmold, or partially decayed pine straw. Although azaleas like shade they will not bloom if planted in dense shade. The kurume varieties thrive in full sunshine if they are given sufficient water. And even if you often see azaleas planted along lakes and streams, their roots must be in well drained soils.

**THEY PIPE RAIN IN CALIFORNIA**--Sunny Santa Barbara, Cal., gets rare rain the hard way by piping it to town through a six-mile-long tunnel under the Santa Ynez Mountains. Backbone of the Tecolote Tunnel is this bulging steel skeleton seen above. It will prop up the mountains and reinforce the tunnel's concrete lining. Project is directed by United States Department of Interior Bureau of Reclamation. Most of the rain to water the California city will run through the Tecolote Tunnel.

above timberline in a bleak land of scant vegetation, cutting winds, and the most dramatic scenery in our hemisphere. Even in mid winter they are loath to descend as other animals do to the valleys where food and shelter are plentiful. They survive on lichens, moss and alpine growth that can be uncovered among the wind swept rocks. A thick coat of perpetually white wool, like fine cashmere is protection against the bitterest weather. White reflects the heat of summer sun and is camouflage during the long snow season. The nanny and billy goat look alike, both having horn about nine inches long. Although those of the female are more slender, the world's record head with 12 1-2 inch horns is that of a nanny. Early explorers often referred to the mountain goat as a small white buffalo and the resemblance is considerable. Like the bison its shoulders are high, head low, neck short and there is a beard of long hairs on the chin. But it is not a buffalo. In fact it is not a goat. The neck of a true goat is rather long and head held high. Scientists tell us it actually is a goat like antelope, like the chamois of Asia, having no close relative in America. The goat stands 3 1-2 feet at the shoulder and weighs up to 276 pounds. It mates in the fall and is probably monogamous. The kid, born six months after breeding, also is all white. It is only 13 1-2 inches tall, can stand 10 minutes after birth, jumps in 30 minutes and at one month is an able climber. Stories of harrowing climbs of the mountain goat are legion. It can outdo the cougar and even the nimble mountain sheep. Hunters tell of watching in great admiration as a goat, like a human fly on a skyscraper, works its way across what appears a sheer cliff. The men held their fire. Congratulations, says the National Wildlife Federation, to the

Mountain Goat  
©1932 National Wildlife Federation

The mountain goat is living proof that American sportsmen are good sports, says the National Wildlife Federation. This likable Old Man of the Mountain is a relatively easy target for modern high powered rifles with telescopic sights, yet there are nearly as many today as there were in early times. Modern hunters want hard to get trophies. Furthermore, outdoorsmen and mountaineers have developed a great admiration for the courage of the white goat. It never runs from sudden danger, but trots off with solemn dignity. Its bearing, white hair and chin whiskers command respect. It is no pugnacious, but will fight for a mate and stand its ground to the death when need be to defend itself or its young. With dagger like horns it has held its own against a pack of wolves, hunting dogs or even the ferocious grizzly bear. Mountain goats are comparatively abundant in British Columbia, and their territory extends south into Washington, Idaho, Montana, and north through the Yukon into Alaska. They dwell by choice high

**North Carolina Cuts Forest Fire Losses**

WASHINGTON, D. C.—(Special)—With only nine per cent of its woodlands unprotected, North Carolina's fire losses last year were held to 206,026 acres. This was less than half the 1950 fire loss. A report published this week by American Forest Products Industries shows that 3,652 forest fires last year compared to 4,357 fires in 1950. Careless debris burners started 1,134 fires last year. Smokers caused 931 and incendiaries 687. The nation's 1951 acreage burn was 10,780,022 — one third less than the previous all time low record recorded in 1949. "An alert public, aware of its responsibilities for being careful with fire in the woods, deserves much credit for keeping the nation's forest fire losses down," says James C. McClellan, chief forester for AFFP. The increased effectiveness of fire fighting units, expanded use of radio communication and power equipment in the woods, and the extension of organized protection have been major factors in cutting fire losses, Chief Forester McClellan adds. North Carolina's forest protection record is carefully analyzed in a statistical report now being distributed by AFFP, national coordinator of the Keep Green forest fire prevention campaign underway in 33 states. A denial treatment may, upon VA approval, be furnished dental treatment at Government expense under conditions similar to those for outpatient medical treatment. For outpatient dental treatment the dental condition must be determined by VA to have been incurred in, or made worse by, the veteran's active service before treatment can be authorized. Preliminary examinations may be made in a VA dental clinic or, if VA dental facilities are not feasibly available, by a participating dentist with VA prior approval. Outpatient Treatment for Presumed Service Connected Disabilities — Veterans with service since June 27, 1950 who need outpatient treatment for disabilities that are presumed to have resulted from their service may be provided needed treatment until VA can determine whether their disabilities

**OUTPATIENT TREATMENT**  
Outpatient medical treatment—Outpatient medical care is available for veterans in need of treatment for service-connected disabilities. Under this benefit, eligible veterans may receive treatment at VA outpatient clinics or from authorized private physicians. Each veteran's eligibility must be determined by VA before treatment of this type can be authorized. Necessary drugs prescribed by the physician authorized to give outpatient treatment, to the veteran may be obtained from home town druggists at Government expense. Outpatient Dental Treatment — Veterans entitled to outpatient sportsmanlike hunters who have spared this stout hearted Old Man of the Mountains.

usually are service-connected. Application for Out Patient treatment should be filed on VA Form 10-5237. I have these forms available at my office at Kenansville and will be glad to furnish these and any other information regarding this benefit. The development of horns can be prevented by applying caustic soda or potash to the horn buttons when calves are four to eight days old, according to State College dairy husbandrymen.

**SNAPS EARS CLEAN**  
...even from down or tangled stalks

**NEW IDEA CORN SNAPPER**  
• Floating points get under down or tangled stalks... guide them surely to low-reaching gathering chains.  
• Blunt and snapping rolls widely adjustable for ears of different size and thickness.  
• Powerful blower fan removes loose silk and trash.  
• Picks and loads 8 to 12 acres a day.
