Under and by virtue of an order of resale of Superior Court of Duplin County, made in a special proceeding entitled, "In the Matter of S. I. Fountain, guardian for Lillian Fountain," the undersigned Commissioner will on Wednesday July 2, 1958 at 12:00, noon, at the Courthouse Door in Kenneville, N. C., Duplin County, offer for sale to the high bidder for cash that certain land described below being in Cypress Creek Township, Duplin County, North Carolina, and more particularly described as follows:

Bidding Bid: \$880.25 Raleigh Fountain

Beginning at a stake in the old line, corner of Lot 2, as indicated

SMALL BUSINESS

By C. Wilson Harder

Many so-called economists express puzzlement over the fact that despite increasing unemployment, living costs continue to go up to new record highs.

A few short months ago, in the drive to stop inflation, the official word went out from Washington urging people to hold their noses to buy less. Now the time has changed and people are asked to buy more.

This is probably no question but what inflation is a grave danger. C. W. Harder says in fact on several occasions, national independent businessmen through National Federation of Independent Business, have pointed out this danger.

The question then gets down as to what causes inflation to continue in a time of a business and job fall off.

Basically, a dollar does not have any magic value. In actuality, it is a measure of productivity. When dollars are exchanged for non-productivity, then the value of the dollar gets less; and this results in inflation.

Thus, today, government is undoubtedly the greatest inflationary force in the country; a far greater force than Mrs. Jones splurging at the apparel shop on Main Street, or her husband signing a contract to buy a flashy, expensive new convertible.

There are a few grim facts that cannot be escaped.

It has been the fashion to government to attribute inflation to people buying too much money. Yet Commerce Dept. figures show the per capita income only increased from \$1,277 per year

In 1953 to \$1,945 in 1956. This is all before taxes, of course.

But from 1947 through 1956 the federal government's civilian payroll expanded from \$13 billion to \$23 billion. In fact, this increase in bureaucratic payrolls in 9 years of almost \$15 billion dollars far exceeds the pay for all the U. S. armed forces in 1956 of \$9.4 billion.

Or to put it another way, the increase in the federal civilian payroll in this period equals the per capita income of 7 1/2 million people. If you add to this the almost \$4 billion now being sought in new foreign give away funds, this reaches the per capita income of almost 10 million people.

A dollar paid to a factory worker, for example, is a dollar paid for producing something of value which finds its way in the market place, creating commerce. But a dollar paid to a government worker is not money paid for productivity.

This is an unpalatable fact which many in government choose not to recognize, yet has done more harm to independent business along the nation's Main Streets than anything else.

As Wendell Barnes, head of the Small Business Administration recently pointed out, over half of the nation's working force is employed by small and independent business.

Thus, it logically follows, that no lasting prosperity can be attained in the nation if red-blokes are continually thrown in the path of independent, free enterprise. The U. S. nation cannot support both free enterprise and huge bureaucracy. Eventually, one, or the other, will go. And if free enterprise becomes the victim, it is a certainty that communism, or socialism, in some form will follow.

4-H Club

(Continued from front)

vin Williams, Pink Hill, Farmer Cooperative demonstration; Mike Goodson, Mt. Olive, Livestock Conservation demonstration; Evelyn Wilkins, Rose Hill, Public Speaking; James Barwick, Mt. Olive, Tractor Operator; Janice Magrady and Joyce James, Chinquapin, Vegetable and Fruit Marketing; Beth Matlock and J. B. Henderson, Rose Hill, Vegetable and Fruit Use; Nina Garner, Warsaw, Robert and Susan Clifton, Faison, and Marina Blackmore, Warsaw, Talent Louie Jones, Faison, Vegetable and Fruit. Demonstrations which place first were Glenn and Melvin Williams in Farmer Cooperative. The title of demonstration was American Free Enterprise System. Evelyn Wilkins, Public Speaking with a speech entitled "Advantages of Rural Living." James Barwick won top honors in Tractor Operation. Joyce James and Janice Magrady, "Vegetable and Fruit Marketing" with a demonstration titled "Pack a Better Crate for a Better Rate." Polly Lee-James placed in the top six in Dress Revue and will compete in the State Dress Revue at 4-H Club, Week Nina Garner and Robert and Susan Clifton placed in the blue award Talent group.

Duplin County placed the second highest number of winners out of the seventy-one (71) counties with Sampson County placing the most with nine winners.

These events are one of the highlights of the 4-H Club Program and Duplin County Club members are to be congratulated on the large participation as well as the fine showing.

Mrs. Lois Britt, assistant home agent, and Ed Simpson, assistant home agent, are 4-H advisers in Duplin County.

Wheat Vote

farmers who will have more than 15 acres of wheat for harvest as grain in 1958; since growers with 15 acres of wheat and those in the feed wheat program are exempt from marketing quota provisions they are not eligible to cast ballots on 1958 wheat marketing quotas.

The vote is on marketing quotas for the 1958 wheat crop and not average allotments. Whether or not quotas are approved, wheat allotments will remain in effect as a means of determining the individual growers' eligibility for price support.

It is important that every farmer who has 15 acres of wheat or more get out and vote in the referendum. The vote will determine to a great degree the amount of money in circulation in the County among wheat farmers.

Duplin Gets

pick-up stations as well as at the market in Wallace. Already farmers in Sampson and Pender Counties are marking time through the Wallace Market.

The market is designed to help Duplin farmers in their quest for bigger and better sources of farm income. In order for an operation to be successful and profitable, each farm producing eggs to have an egg cooling system. Quality is paramount and during hot weather eggs deteriorate rapidly without a cooling system.

Sasser said that the eggs will be graded and inspected by an inspector of the United States Department of Agriculture and if they do not pass they cannot be sold on the out of state market obtained. This is the reason farmers with 50 to 100 laying hens cannot sell profitably on the new market.

Over the past three years, Duplin County has become the leading poultry county in Eastern North Carolina.

Recently, Bill Jasper has been employed as assistant county agent to work with the poultry farmers in the county on educational and production work.

git through deciding who stole what with that television station down in Miami.

I don't know where this thing of wimmens' clothes is going to end. I see where some fellah has designed a bathing suit that works like venetian blinds. If the gal wants a little more sun she can yank a string and the flaps come open. And if she don't want no more sun she yanks the string the other way and the flaps close. And I see where they is discussing a new evening gown that has a top made out of transparent plastic. In short, the gal has got on clothes but she ain't got on any.

It's a greasy pity, Mister Editor that folks with such brains ain't working on somepeun useful. Fer instan', if they'd develop a hog that has got four hams instead of two we'd be gitting some place.

Over North Carolina Survey Shows Need For More Water Research

A statewide survey of water use in North Carolina points up a need for more extensive research to assure adequate supplies for the future, the State Board of Water Commissioners reported today.

The Board put present use at an average of 914 million gallons a day and estimated that by 1975 the demand will be twice as great. The figures come from information which is being gathered as a basis for legislative recommendations.

The survey showed that while most North Carolinians depend on underground sources for their water supplies, the use of surface water far exceeds that of ground water.

Industrial use of surface water averages 478 million gallons a day compared with 37 million gallons a day from ground supplies. Extremely heavy use of surface water by a few industries accounts for the difference.

Water for agricultural use (for irrigation and livestock), averaging 361 million gallons a day, is drawn for the most part from surface sources, although a definite breakdown could not be determined.

Only for domestic purposes (including both urban and rural homes) does ground water use exceed that of surface water. Of the average 252 million gallons used daily, 132 million gallons comes from underground and 120 million gallons from the surface. The explanation is simple. The dispersed rural population—about two-thirds of the state's people—

ed it should be applied and mixed into the soil from two to four months prior to seeding.

According to Reynolds, a prompt reply can be expected from the Soil Testing Laboratory Durkin June and July. There is much gain by early sampling, and Reynolds encourages farmers to stop by his office and obtain samples and instruction for collecting samples. Do it today.
