Garden Times

There is an interesting article in the May issue of the Reader's Digest you should read. The title - "Goodbye Green Thumb." My opinion? No comment.

Word comes from the University of California that garlic juice mixed with water, has been successfully used to control some of our more common fungus diseases—brown rot of peaches, anthracnose of bean, downy mildew of cucumber, and others.

This is interesting and I plan to follow the progress made. Don't be alarmed if you "just can't stand the smell" because the scientists report that the juice can be made to "smell like roses." Maybe the next step will be a pellet to make your breath smell like roses after eating onions. Hope so, because I love 'em. Peaches will soon be in season so you should locate your source of supply and make arrangements to freeze your quota. Here are some of the best freezing varieties and the approximate ripening date for the Sandhills: Coronet, June 25; Dixigen, June 25; Red Haven, June 25; Golden Jubilee, July; Halloween, July 5; Sunhigh, July 7; Georgia Belle, July 15; and Alberta, July 20. For the central piedmont, figure on the varieties ripening approximately one week later; and for the upper Piedmont and mountains, from two to three weeks later, depending on altitude. If we could single out the most important factor responsible for a quality frozen product, it

Shrinks Hemorrhoids
Without Surgery
Stops Itch - Relieves Pain

For the first time science has found a new healing substance with the astonishing ability to shrink hemorrhoids and to relieve pain—without surgery. In case after case, while gently relieving pain, actual reduction (shrinkage) took place. Most amazing of all—results were so thorough that surgeons made astonishing statements like "Piles have ceased to be a problem!" The secret is a new healing substance (Bio-Dynex) —a discovery of a world-famous research institute. This substance is now available in suppository or ointment form called Preparation H. At all drug counters—money back guarantee. *S

would be maturity or ripeness. Ripe fruit is essential for peach pulp or puree. A good maturity index is to watch for color changes, particularly the change from a hard green ground or base color to creams and yellows. Place a peach in the palm of your hand and apply pressure by closing your fingers. If it "gives a little" you can pick and then permit the fruit to soften to the desired degree for processing. If it is still hard when you make this test, it has not reached maximum tree-ripe quality.

In cases of heavy parasite infection, 25 per cent of cattle feed may be wasted.
