### Many Farmers Show Interest In Soybeans

Hillsboro — 500 acres of soybeans for seed were raised in 1950 and because of the success had by these farmers many more acres will be seeded to beans this year, according to Don S. Matheson, County Farm Agent.

The reported yields up to 30 bushels per acre were not unusual last year.

Matheson lists the following steps to be followed in raising soybeans: (1) Prepare land well and kill as much grass and weeds as possible before planting, (2) be sure to use lime at the rate of 1 to 2 tons per acre on land that has not been limed, (3) fertilize with 400 to 600 lbs. of 0-14-14 fertilizer, (4) use Roanoke variety of seed. Broadcast or plant in rows. If broadcast, sow thick -- 2 to 2½ bushels per acre, (5) Inoculate seed. This saves from 4 to 10 bushels per acre, (6) Cultivate beans with sectio narrow or weeder just after coming up.
