Tobacco Men Are Fearful of a Wide-Spread Desire Among Growers to Over-Plant This Year.

A resolution was passed at the meeting of the Board of Directors of the Tobacco Association of the United States, held February 17th, appointing a committee to take up with the heads of the agricultural departments of the several tebacco-raising States The situation now existing is that in bright tobacco (following two comparatively small crops of 1925 and 1926) there was produced in 1927 about 720 mill pounds (the largest crop of bright tobacco ever raised). paratively, small crops, prices were well sustained, restiting in an average of around 22c.

In many sections, tobacco is the only money crop, and in other sections, where cotton is also raised, the menace of the boll weevil, together with some decline in the price of cotton lately, naturally will have a tendency to plant tobacco in preference to cotton.

The general consensus of opinion among tobacco men is that any preduction much over 600 million pounds of bright tobacco will result in a surplus, and therefore will certainly affect prices, as the domestic manufacturers and foreign demands are now well supplied and any shortage existing has been overcome, and a crop anything like over 700 million pounds may result in very much lower

The production abroad has become a material factor, especially in the prices of common tobacco, and this class can only be sold at very low

prices. Therefore, it appears to the Asseciation that the farmers should be acagainted with these facts to the end Having enough units to graduate on that they should be warned against March 15th, she decided to remain this intended over-production, as all through the spring term on account the information received, measured of her position as business manager by the number of increased plant bed of the annual, and is now taking cloths and fertilizer sold, indicates electives in Science and North Caro- the farmers have in mind an increase over even last year's large planting, In addition to her rather difficult and if the crop could be held down to course and while making splendid something less than last year's progrades throughout the entire four duction the farmers would get more years Miss Smith has been an out- for a 600-million-pound crop in delstanding player on the basket ball lars and cents than they would for team.
