Uncle Sam's Trade With Chile Growing

Our Manufacturers Supply One-third of Imports to That Country

Chile is one of Uncle Sam's best customers, according to the U.S. Department of Commerce. Thirty-three cents of every dollar she spends abroad comes to the United States. In 1929 this amounted to sixty million dollars, or more than double the amount spent

Unloading Cargo American Made Locomotives in Valparaiso. Chile

in any other country. Chile's imported goods amounted to \$44 per capita that

The principal products purchased from the United States included cotton fabrics, automobiles, trucks, gasoline, ucts. Since these and many other products are manufactured in this country in excess of the home demand. the development of markets in other countries is essential to the future prosperity of our country.

In exchange for the products sold to Chile, the United States bought raw materials, principally copper to be converted into manufactured products and nitrate of sods to be used by farmers in producing profitable crops. Govern mants of both countries actively encourage this exchange of trade. Our commerce officials have shown that American manufacturers can enlarge their markets in South America. Near ly all these countries have raw prodnots to exchange for the goods we

False Economy Would Cut Big Slice Off Cotton Profits

It is costly to omit nitrogen on cotton, as shown by this field on the farm of A. Q. Neville, Rossville, Tenn. Plot at left which received 250 lbs. Chilean nitrate per later of Size in the state of the dissolution of said

toward economy would cost cotton farmers about a third of a bale per acre, according to a summary of a large number of farm tests reported recently by E. C. Westbrook, cotton and tobacco specialist of the Georgia State College of Agriculture.

Instead of representing economy, the cutting out of fertilizer this year would likely make the cost of a pound of cotton so high that it would be impossible to show a profit with prices at their present low level.

In Georgia tests in which no fertilizer was used the yield was 313 pounds seed cotton per acre. Where fertilizer was used the yield was increased from | quick-acting nitrogen.

Omission of fertilizer as a step | 360 to 898 pounds. The average in crease was better than 500 pounds per acre. Figuring seed cotton at 4 cents per pound (which brings lint to 9 cents), but valuing the fertilizer at a cost of \$5.00 to \$10.00 a ton above to \$17.92 per acre.

Professor Westbrook's analysis shows that farmers can count on nearly \$7 extra per acre by side-dressing with 100 to 150 pounds of Chilean nitrate of soda after chopping. If farmers this year reduce the amount of fertilizer customarily used at planting, it is all the more important.
